

Addison-Wesley Professional Ruby Series

SERVICE-ORIENTED DESIGN WITH RUBY AND RAILS

Foreword by Obie Fernandez, *Series Editor*

PAUL DIX

with TROTTER CASHION ■ BRYAN HELMKAMP ■ JAKE HOWERTON

SERVICE-ORIENTED DESIGN WITH RUBY AND RAILS

Service-Oriented Design with Ruby and Rails

Table of Contents

Contents

Foreword

Preface

Acknowledgments

About the Author

1 Implementing and Consuming Your First Service

 Whats a Service?

 Service Requirements

 The Ruby Tool Set

 Sinatra

 ActiveRecord

 JSON

 Typhoeus

 RSpec

 The User Service Implementation

 Using GET

 POSTing a User

 PUTing a User

 Deleting a User

 Verifying a User

Table of Contents

Implementing the Client Library

- Finding a User

- Creating a User

- Updating a User

- Destroying a User

- Verifying a User

Putting It All Together

Conclusion

2 An Introduction to Service-Oriented Design

- Use of Service-Oriented Design in the Wild

- Service-Oriented Design Versus Service-Oriented
Architecture Versus RESTful-Oriented Architecture

Making the Case for Service-Oriented Design

- Isolation

- Robustness

- Scalability

- Agility

- Interoperability

- Reuse

Conclusion

3 Case Study: Social Feed Reader

- A Typical Rails Application

- The Rails Social Feed Reader Application

- Features

- Current Setup

Table of Contents

Converting to Services

- Segmenting into Services

- Breaking Up the Application into Services

Conclusion

4 Service and API Design

Partitioning Functionality into Separate Services

- Partitioning on Iteration Speed

- Partitioning on Logical Function

- Partitioning on Read/Write Frequencies

- Partitioning on Join Frequency

Versioning Services

- Including a Version in URIs

- Using Accept Headers for Versioning

URIs and Interface Design

Successful Responses

- HTTP Status Codes

- HTTP Caching

- Successful Response Bodies

Error Responses

- HTTP Status Codes

- Error Response Bodies

Handling Joins

- Storing References

- Joining at the Highest Level

- Beware of Call Depth

API Complexity

Table of Contents

Atomic APIs

Multi-Gets

Multiple Models

Conclusion

5 Implementing Services

The Vote Service

A Multi-Get Interface

The Vote Interface

API Design Guidelines

Models

Rails

Rails 2.3 Routes

Rails 3 Routes

The Rails Controller

Sinatra

Rack

Conclusion

6 Connecting to Services

Blocking I/O, Threading, and Parallelism

Asynchronous I/O

Multi-threading

Typhoeus

Making Single Requests

Making Simultaneous Requests

Multi-threaded Requests

Table of Contents

JRuby

Logging for Performance

Handling Error Conditions

Testing and Mocking Service Calls

Requests in Development Environments

Conclusion

7 Developing Service Client Libraries

Packaging

Jeweler

Building and Deploying a Library

Parsing Logic

The JSON Gem

YAJL Ruby

Wrapping Parsed Results

ActiveModel

Validations

Serialization

Connection and Request Logic

Data Reads

Data Writes

Mocks, Stubs, and Tests

Conclusion

8 Load Balancing and Caching

Latency and Throughput

Load Balancing

Table of Contents

Load Balancing Algorithms

Implementing Load Balancing

Caching with Memcached

The Memcached Client and ActiveRecord

Time-Based Expiration

Manual Expiration

Generational Cache Keys

HTTP Caching

Expiration-Based Caching

Validation-Based Caching

Implementing HTTP Caching

Conclusion

9 Parsing XML for Legacy Services

XML

REXML

Nokogiri

SOAP

Exploring Web Services with a WSDL File

Making Requests

Conclusion

10 Security

Authentication

HTTP Authentication

Signing Requests

SSL for Authentication

Authentication for Rails Applications

Table of Contents

Authorization

- Firewalls

- An RBAC Authorization Service

Encryption

- SSL for Encryption

- Public/Private Key Pairs for Encryption

Conclusion

11 Messaging

What Is Messaging?

- Synchronous Versus Asynchronous Messaging

- Queues

- Message Formats

RabbitMQ and AMQP

- Queues in RabbitMQ

- Exchanges and Bindings

- Durability and Persistence

- Client Libraries

Synchronous Reads, Asynchronous Writes

- HTTP-Based Reads

- Messaging-Based Writes

The CAP Theorem

- Eventual Consistency

- Designing Around Consistency

Data Is the API

- Operations on Fields

- Modifications to Field Operations

Table of Contents

Conclusion

12 Web Hooks and External Services

Web Hooks

PubSubHubbub

Receiving Web Hooks

Providing Web Hooks

Strategies for Dealing with Failure

OAuth

Implementing an OAuth Consumer

Implementing an OAuth Provider

Integrating with External Services

Consuming Data

Pushing Data

The Request Lifecycle

Worker Processes

Ensuring Performance and Reliability

Segregating Queues

Metrics

Throttling and Quotas

Conclusion

Appendix RESTful Primer

Roy Fieldings REST

Constraints

Architectural Elements

Architectural Views

REST and Resources

Table of Contents

URLs and Addressability

Representations

HTTP and the Uniform Interface

HTTP Methods

HTTP Headers

HTTP Status Codes

Conclusion

Index
