

ESSENTIAL CODE AND COMMANDS

Objective-C 2.0

PHRASEBOOK

ESSENTIAL CODE AND COMMANDS

Objective-C

PHRASEBOOK

Objective-C Phrasebook

Table of Contents

Table of Contents
Introduction

1 The Objective-C Philosophy

Understanding the Object Model

A Tale of Two Type Systems

C Is Objective-C

The Language and the Library

The History of Objective-C

Cross-Platform Support

Compiling Objective-C Programs

2 An Objective-C Primer

Declaring Objective-C Types

Sending Messages

Understanding Selectors

Declaring Classes

Using Protocols

Adding Methods to a Class

Using Informal Protocols

Synthesizing Methods with Declared Properties

Understanding self, _cmd, super

Understanding the isa Pointer

Initializing Classes

Reading Type Encodings

Using Closures

3 Memory Management

Retaining and Releasing

Assigning to Instance Variables

Avoiding Retain Cycles

Autorelease Pools

Using Autoreleased Constructors

Autoreleasing Objects in Accessors

Supporting Automatic Garbage Collection

Interoperating with C

Using Weak References

Allocating Scanned Memory

4 Common Objective-C Patterns

Supporting Two-Stage Creation

Copying Objects

Archiving Objects

Creating Designated Initalizers

Enforcing the Singleton Pattern

Delegation

Providing Façades

Creating Class Clusters

Using Run Loops

5 Numbers

Storing Numbers in Collections

Performing Decimal Arithmetic

Converting Between Strings and Numbers

Reading Numbers from Strings

6 Manipulating Strings

Creating Constant Strings

Comparing Strings

Processing a String One Character at a Time

Converting String Encodings

Trimming Strings

Splitting Strings

Copying Strings

Creating Strings from Templates

Storing Rich Text

7 Working with Collections

Using Arrays

Manipulating Indexes

Storing Unordered Groups of Objects

Creating a Dictionary

Iterating Over a Collection

Finding an Object in a Collection

Subclassing Collections

8 Dates and Times

Finding the Current Date

Converting Dates for Display

Calculating Elapsed Time

Parsing Dates from Strings

Receiving Timer Events

9 Working with Property Lists

Storing Collections in Property Lists

Reading Data from Property Lists

Converting Property List Formats

Storing User Defaults

Storing Arbitrary Objects in User Defaults

10 Interacting with the Environment

Getting Environment Variables

Parsing Command-Line Arguments

Accessing the Users Locale

Supporting Sudden Termination

11 Key-Value Coding

Accessing Values by Key

Ensuring KVC Compliance

Understanding Key Paths

Observing Keys

Ensuring KVO Compliance

12 Handling Errors

Runtime Differences for Exceptions

Throwing and Catching Exceptions

Using Exception Objects

Managing Memory with Exceptions

Passing Error Delegates

Returning Error Values

Using NSError

13 Accessing Directories and Files

Reading a File

Moving and Copying Files

Getting File Attributes

Manipulating Paths
Determining if a File or Directory Exists
Working with Bundles
Finding Files in System Locations

14 Threads

Creating Threads
Controlling Thread Priority
Synchronizing Threads
Storing Thread-Specific Data
Waiting for a Condition

15 Blocks and Grand Central Binding Variables to Blocks Managing Memory with Blocks Performing Actions in the Background Creating Custom Work Queues

16 Notifications Requesting Notifications Sending Notifications

Enqueuing Notifications
Sending Notifications Between Applications

17 Network Access

Wrapping C Sockets

Connecting to Servers

Sharing Objects Over a Network

Finding Network Peers

18 Debugging Objective-C

Inspecting Objects

Recognizing Memory Problems

Watching Exceptions

Asserting Expectations

Logging Debug Messages

19 The Objective-C Runtime

Sending Messages by Name

Finding Classes by Name

Testing If an Object Understands a Method

Forwarding Messages

Finding Classes
Inspecting Classes
Creating New Classes
Index
