Praise for *How Google Tests Software*

“James Whittaker has long had the pulse of the issues that are shaping testing practice. In the decade of the Cloud Transformation, this book is a must read not just for Googlers, but for all testers who want their practices to remain relevant, competitive, and meaningful.”

—**Sam Guckenheimer**, Product Owner,
Visual Studio Strategy, Microsoft

“Google has consistently been an innovator in the app testing space—whether it’s blending test automation with manual efforts, melding in-house and outsourced resources, or more recently, pioneering the use of in-the-wild testing to complement their in-the-lab efforts. This appetite for innovation has enabled Google to solve new problems and launch better apps.

In this book, James Whittaker provides a blueprint for Google’s success in the rapidly evolving world of app testing.”

—**Doron Reuveni**, CEO and Cofounder, uTest

“This book is a game changer, from daily releases to heads-up displays. James Whittaker takes a computer-science approach to testing that will be the standard for software companies in the future. The process and technical innovations we use at Google are described in a factual and entertaining style. This book is a must read for anyone involved in software development.”

—**Michael Bachman**, Senior Engineering Manager
at Google Inc., AdSense/Display

“By documenting much of the magic of Google’s test engineering practices, the authors have written the equivalent of the Kama Sutra for modern software testing.”

—**Alberto Savoia**, Engineering Director, Google

“If you ship code in the cloud and want to build a strategy for ensuring a quality product with lots of happy customers, you must study and seriously consider the methods in this book.”

—**Phil Waligora**, Salesforce.com

“James Whittaker is an inspiration and mentor to many people in the field of testing. We wouldn’t have the talent or technology in this field without his contributions. I am consistently in awe of his drive, enthusiasm, and humor. He’s a giant in the industry and his writing should be required reading for anyone in the IT industry.”

—**Stewart Noakes**, Chairman TCL Group Ltd.,
United Kingdom
