Introduction

 Why Choose MySQL?

 What You Can Expect from This Book

 Road Map to This Book

 Part I: General MySQL Use

 Part II: Using MySQL Programming Interfaces

 Part III: MySQL Administration

 Part IV: Appendixes

 How to Read This Book

 Versions of Software Covered in This Book

 Conventions Used in This Book

 Additional Resources

Part I: General MySQL Use

 1 Getting Started with MySQL

 1.1 How MySQL Can Help You

 1.2 A Sample Database

 1.2.1 The U.S. Historical League Project

 1.2.2 The Grade-Keeping Project

Table of Contents

1.2.3 How the Sample Database Applies to You

1.3 Basic Database Terminology

1.3.1 Structural Terminology

1.3.2 Query Language Terminology

1.3.3 MySQL Architectural Terminology

1.4 A MySQL Tutorial

1.4.1 Obtaining the Sample Database Distribution

1.4.2 Preliminary Requirements

1.4.3 Establishing and Terminating Connections to the MySQL Server

1.4.4 Executing SQL Statements

1.4.5 Creating a Database

1.4.6 Creating Tables

1.4.7 Adding New Rows

1.4.8 Resetting the sampdb Database to a Known State

1.4.9 Retrieving Information

1.4.10 Deleting or Updating Existing Rows

1.5 Tips for Interacting with mysql

1.5.1 Simplifying the Connection Process

1.5.2 Issuing Statements with Less Typing

1.6 Where to Now?

2 Using SQL to Manage Data

2.1 The Server SQL Mode

2.2 MySQL Identifier Syntax and Naming Rules

2.3 Case Sensitivity in SQL Statements

2.4 Character Set Support

2.4.1 Specifying Character Sets

2.4.2 Determining Character Set Availability and Current Settings

2.4.3 Unicode Support

2.5 Selecting, Creating, Dropping, and Altering Databases

2.5.1 Selecting Databases

2.5.2 Creating Databases

Table of Contents

- 2.5.3 Dropping Databases
- 2.5.4 Altering Databases
- 2.6 Creating, Dropping, Indexing, and Altering Tables
 - 2.6.1 Storage Engine Characteristics
 - 2.6.2 Creating Tables
 - 2.6.3 Dropping Tables
 - 2.6.4 Indexing Tables
 - 2.6.5 Altering Table Structure
- 2.7 Obtaining Database Metadata
 - 2.7.1 Obtaining Metadata with SHOW
 - 2.7.2 Obtaining Metadata with INFORMATION_SCHEMA
 - 2.7.3 Obtaining Metadata from the Command Line
- 2.8 Performing Multiple-Table Retrievals with Joins
 - 2.8.1 Inner Joins
 - 2.8.2 Qualifying References to Columns from Joined Tables
 - 2.8.3 Left and Right (Outer) Joins
- 2.9 Performing Multiple-Table Retrievals with Subqueries
 - 2.9.1 Subqueries with Relative Comparison Operators
 - 2.9.2 IN and NOT IN Subqueries
 - 2.9.3 ALL, ANY, and SOME Subqueries
 - 2.9.4 EXISTS and NOT EXISTS Subqueries
 - 2.9.5 Correlated Subqueries
 - 2.9.6 Subqueries in the FROM Clause
 - 2.9.7 Rewriting Subqueries as Joins
- 2.10 Performing Multiple-Table Retrievals with UNION
- 2.11 Multiple-Table Deletes and Updates
- 2.12 Performing Transactions
 - 2.12.1 Using Transactions to Ensure Safe Statement Execution
 - 2.12.2 Using Transaction Savepoints
 - 2.12.3 Transaction Isolation
- 2.13 Foreign Keys and Referential Integrity
- 2.14 Using FULLTEXT Searches

Table of Contents

- 2.14.1 Natural Language FULLTEXT Searches
- 2.14.2 Boolean Mode FULLTEXT Searches
- 2.14.3 Query Expansion FULLTEXT Searches
- 2.14.4 Configuring the FULLTEXT Search Engine

3 Data Types

3.1 Data Value Categories

- 3.1.1 Numeric Values
- 3.1.2 String Values
- 3.1.3 Temporal (Date and Time) Values
- 3.1.4 Spatial Values
- 3.1.5 Boolean Values
- 3.1.6 The NULL Value

3.2 MySQL Data Types

- 3.2.1 Data Type Overview
- 3.2.2 Specifying Column Types in Table Definitions
- 3.2.3 Specifying Column Default Values
- 3.2.4 Numeric Data Types
- 3.2.5 String Data Types
- 3.2.6 Temporal (Date and Time) Data Types

3.3 How MySQL Handles Invalid Data Values

3.4 Working with Sequences

- 3.4.1 General AUTO_INCREMENT Properties
- 3.4.2 Storage Engine-Specific AUTO_INCREMENT Properties
- 3.4.3 Issues to Consider with AUTO_INCREMENT Columns
- 3.4.4 Tips for Working with AUTO_INCREMENT Columns
- 3.4.5 Generating Sequences Without AUTO_INCREMENT

3.5 Expression Evaluation and Type Conversion

- 3.5.1 Writing Expressions
- 3.5.2 Type Conversion

3.6 Choosing Data Types

- 3.6.1 What Kind of Values Will the Column Hold?
- 3.6.2 Do Your Values Lie Within Some Particular Range?

Table of Contents

4 Views and Stored Programs

4.1 Using Views

4.2 Using Stored Programs

4.2.1 Compound Statements and Statement Delimiters

4.2.2 Stored Functions and Procedures

4.2.3 Triggers

4.2.4 Events

4.3 Security for Views and Stored Programs

5 Query Optimization

5.1 Using Indexing

5.1.1 Benefits of Indexing

5.1.2 Costs of Indexing

5.1.3 Choosing Indexes

5.2 The MySQL Query Optimizer

5.2.1 How the Optimizer Works

5.2.2 Using EXPLAIN to Check Optimizer Operation

5.3 Choosing Data Types for Efficient Queries

5.4 Choosing Table Storage Formats for Efficient Queries

5.5 Loading Data Efficiently

5.6 Scheduling, Locking, and Concurrency

Part II: Using MySQL Programming Interfaces

6 Introduction to MySQL Programming

6.1 Why Write Your Own MySQL Programs?

6.2 APIs Available for MySQL

6.2.1 The C API

6.2.2 The Perl DBI API

6.2.3 The PHP API

6.3 Choosing an API

6.3.1 Execution Environment

6.3.2 Performance

6.3.3 Development Time

Table of Contents

6.3.4 Portability

7 Writing MySQL Programs Using C

7.1 Compiling and Linking Client Programs

7.2 Connecting to the Server

7.3 Handling Errors and Processing Command Options

7.3.1 Checking for Errors

7.3.2 Getting Connection Parameters at Runtime

7.3.3 Incorporating Option Processing into a Client Program

7.4 Processing SQL Statements

7.4.1 Handling Statements That Modify Rows

7.4.2 Handling Statements That Return a Result Set

7.4.3 A General-Purpose Statement Handler

7.4.4 Alternative Approaches to Statement Processing

7.4.5 `mysql_store_result()` Versus `mysql_use_result()`

7.4.6 Using Result Set Metadata

7.4.7 Encoding Special Characters and Binary Data

7.5 An Interactive Statement-Execution Program

7.6 Writing Clients That Include SSL Support

7.7 Using Multiple-Statement Execution

7.8 Using Server-Side Prepared Statements

7.9 Using Prepared CALL Support

8 Writing MySQL Programs Using Perl DBI

8.1 Perl Script Characteristics

8.2 Perl DBI Overview

8.2.1 DBI Data Types

8.2.2 A Simple DBI Script

8.2.3 Handling Errors

8.2.4 Handling Statements That Modify Rows

8.2.5 Handling Statements That Return a Result Set

8.2.6 Quoting Special Characters in Statement Strings

8.2.7 Placeholders and Prepared Statements

Table of Contents

8.2.8 Binding Query Results to Script Variables

8.2.9 Specifying Connection Parameters

8.2.10 Debugging

8.2.11 Using Result Set Metadata

8.2.12 Performing Transactions

8.3 Putting DBI to Work

8.3.1 Generating the Historical League Directory

8.3.2 Sending Membership Renewal Notices

8.3.3 Historical League Member Entry Editing

8.3.4 Finding Historical League Members with Common Interests

8.3.5 Putting the Historical League Directory Online

8.4 Using DBI in Web Applications

8.4.1 Setting Up Apache for CGI Scripts

8.4.2 A Brief CGI.pm Primer

8.4.3 Connecting to the MySQL Server from Web Scripts

8.4.4 A Web-Based Database Browser

8.4.5 A Grade-Keeping Project Score Browser

8.4.6 Historical League Common-Interest Searching

9 Writing MySQL Programs Using PHP

9.1 PHP Overview

9.1.1 A Simple PHP Script

9.1.2 Using PHP Library Files for Code Encapsulation

9.1.3 A Simple Data-Retrieval Page

9.1.4 Processing Statement Results

9.1.5 Testing for NULL Values in Query Results

9.1.6 Using Prepared Statements

9.1.7 Using Placeholders to Handle Data Quoting Issues

9.1.8 Handling Errors

9.2 Putting PHP to Work

9.2.1 An Online Score-Entry Application

9.2.2 Creating an Interactive Online Quiz

9.2.3 Historical League Online Member Entry Editing

Table of Contents

Part III: MySQL Administration

10 Introduction to MySQL Administration

- 10.1 MySQL Components
- 10.2 General MySQL Administration
- 10.3 Access Control and Security
- 10.4 Database Maintenance, Backups, and Replication

11 The MySQL Data Directory

- 11.1 The Data Directory Location
- 11.2 Structure of the Data Directory
 - 11.2.1 How the MySQL Server Provides Access to Data
 - 11.2.2 Representation of Databases in the Filesystem
 - 11.2.3 Representation of Tables in the Filesystem
 - 11.2.4 Representation of Views and Triggers in the Filesystem
 - 11.2.5 How SQL Statements Map onto Table File Operations
 - 11.2.6 Operating System Constraints on Database Object Names
 - 11.2.7 Factors That Affect Maximum Table Size
 - 11.2.8 Implications of Data Directory Structure for System Performance
 - 11.2.9 MySQL Status and Log Files
- 11.3 Relocating Data Directory Contents
 - 11.3.1 Relocation Methods
 - 11.3.2 Relocation Precautions
 - 11.3.3 Assessing the Effect of Relocation
 - 11.3.4 Relocating the Entire Data Directory
 - 11.3.5 Relocating Individual Databases
 - 11.3.6 Relocating Individual Tables
 - 11.3.7 Relocating the InnoDB System Tablespace
 - 11.3.8 Relocating Status and Log Files

12 General MySQL Administration

- 12.1 Securing a New MySQL Installation
 - 12.1.1 Establishing Passwords for the Initial MySQL Accounts
 - 12.1.2 Setting Up Passwords for Additional Servers

Table of Contents

12.2 Arranging for MySQL Server Startup and Shutdown

- 12.2.1 Running the MySQL Server On Unix
- 12.2.2 Running the MySQL Server On Windows
- 12.2.3 Specifying Server Startup Options
- 12.2.4 Controlling How the Server Listens for Connections
- 12.2.5 Stopping the Server
- 12.2.6 Regaining Control of the Server When You Cannot Connect to It

12.3 Using System and Status Variables

- 12.3.1 Checking and Setting System Variable Values
- 12.3.2 Checking Status Variable Values

12.4 The Plugin Interface

12.5 Storage Engine Configuration

- 12.5.1 Selecting Storage Engines
- 12.5.2 Selecting a Default Storage Engine
- 12.5.3 Configuring the InnoDB Storage Engine

12.6 Globalization Issues

- 12.6.1 Configuring Time Zone Support
- 12.6.2 Selecting the Default Character Set and Collation
- 12.6.3 Selecting the Language for Error Messages
- 12.6.4 Selecting the Locale

12.7 Server Tuning

- 12.7.1 General-Purpose System Variables for Server Tuning
- 12.7.2 Storage Engine Tuning
- 12.7.3 Using the Query Cache
- 12.7.4 Hardware Optimizations

12.8 Server Logs

- 12.8.1 The Error Log
- 12.8.2 The General Query Log
- 12.8.3 The Slow Query Log
- 12.8.4 The Binary Log
- 12.8.5 The Relay Log
- 12.8.6 Using Log Tables

Table of Contents

12.8.7 Log Management

12.9 Running Multiple Servers

12.9.1 General Multiple Server Issues

12.9.2 Configuring and Compiling Different Servers

12.9.3 Strategies for Specifying Startup Options

12.9.4 Using `mysqld_multi` for Server Management

12.9.5 Running Multiple Servers on Windows

12.9.6 Running Clients of Multiple Servers

12.10 Updating MySQL

13 Security and Access Control

13.1 Securing Filesystem Access to MySQL

13.1.1 How to Steal Data

13.1.2 Securing Your MySQL Installation

13.2 Managing MySQL User Accounts

13.2.1 High-Level MySQL Account Management

13.2.2 Granting Privileges

13.2.3 Displaying Account Privileges

13.2.4 Revoking Privileges

13.2.5 Changing Passwords or Resetting Lost Passwords

13.2.6 Avoiding Access-Control Risks

13.2.7 Pluggable Authentication and Proxy Users

13.3 Grant Table Structure and Contents

13.3.1 Grant Table Scope-of-Access Columns

13.3.2 Grant Table Privilege Columns

13.3.3 Grant Table Authentication Columns

13.3.4 Grant Table SSL-Related Columns

13.3.5 Grant Table Resource Management Columns

13.4 How the Server Controls Client Access

13.4.1 Scope Column Contents

13.4.2 Statement Access Verification

13.4.3 Scope Column Matching Order

13.4.4 A Privilege Puzzle

Table of Contents

13.5 Setting Up Secure Connections Using SSL

14 Database Maintenance, Backups, and Replication

14.1 Principles of Preventive Maintenance

14.2 Performing Database Maintenance with the Server Running

14.2.1 Locking Individual Tables for Read-Only or Read/Write Access

14.2.2 Locking All Databases for Read-Only Access

14.3 General Preventive Maintenance

14.3.1 Using the Servers Auto-Recovery Capabilities

14.3.2 Scheduling Preventive Maintenance

14.4 Making Database Backups

14.4.1 Storage Engine Portability Characteristics

14.4.2 Making Text Backups with mysqldump

14.4.3 Making Binary Database Backups

14.4.4 Backing Up InnoDB Tables

14.5 Copying Databases to Another Server

14.5.1 Copying Databases Using a Backup File

14.5.2 Copying Databases from One Server to Another

14.6 Checking and Repairing Database Tables

14.6.1 Checking Tables with CHECK TABLE

14.6.2 Repairing Tables with REPAIR TABLE

14.6.3 Using mysqlcheck to Check and Repair Tables

14.7 Using Backups for Data Recovery

14.7.1 Recovering Entire Databases

14.7.2 Recovering Individual Tables

14.7.3 Re-Executing Statements in Binary Log Files

14.7.4 Coping with InnoDB Auto-Recovery Problems

14.8 Setting Up Replication Servers

14.8.1 How Replication Works

14.8.2 Establishing a Master-Slave Replication Relationship

14.8.3 Binary Logging Formats

14.8.4 Using a Replication Slave for Making Backups

Table of Contents

Part IV: Appendixes

A Software Required to Use This Book

A.1 Obtaining MySQL and Related Software

A.2 MySQL Installation Notes

A.2.1 Creating a Login Account for the MySQL User

A.2.2 Installing MySQL

A.2.3 Setting Your PATH Environment Variable

A.2.4 Initializing the Data Directory and Grant Tables

A.2.5 Starting the Server

A.2.6 Initializing Other System Tables

A.3 Perl DBI Installation Notes

A.4 PHP and PDO Installation Notes

B Data Type Reference

B.1 Numeric Types

B.1.1 Integer Types

B.1.2 Fixed-Point Types

B.1.3 Floating-Point Types

B.1.4 BIT Type

B.2 String Types

B.2.1 Binary String Types

B.2.2 Nonbinary String Types

B.2.3 ENUM and SET Types

B.3 Temporal (Date and Time) Types

C Operator and Function Reference

C.1 Operators

C.1.1 Operator Precedence

C.1.2 Grouping Operators

C.1.3 Arithmetic Operators

C.1.4 Comparison Operators

C.1.5 Bit Operators

C.1.6 Logical Operators

Table of Contents

C.1.7 Cast Operators

C.1.8 Pattern-Matching Operators

C.2 Functions

C.2.1 Comparison Functions

C.2.2 Cast Functions

C.2.3 Numeric Functions

C.2.4 String Functions

C.2.5 Date and Time Functions

C.2.6 Summary Functions

C.2.7 Security and Compression Functions

C.2.8 Advisory Locking Functions

C.2.9 IP Address Functions

C.2.10 XML Functions

C.2.11 Spatial Functions

C.2.12 Miscellaneous Functions

D System, Status, and User Variable Reference

D.1 System Variables

D.1.1 InnoDB System Variables

D.2 Status Variables

D.2.1 InnoDB Status Variables

D.2.2 Query Cache Status Variables

D.2.3 SSL Status Variables

D.3 User-Defined Variables

E SQL Syntax Reference

E.1 SQL Statement Syntax (Noncompound Statements)

E.2 SQL Statement Syntax (Compound Statements)

E.2.1 Control Structure Statements

E.2.2 Declaration Statements

E.2.3 Cursor Statements

E.2.4 Condition-Handling Statements

E.3 Comment Syntax

Table of Contents

F MySQL Program Reference

F.1 Displaying a Programs Help Message

F.2 Specifying Program Options

F.2.1 Standard MySQL Program Options

F.2.2 Option Files

F.2.3 Environment Variables

F.3 myisamchk

F.3.1 Standard Options Supported by myisamchk

F.3.2 Options Specific to myisamchk

F.3.3 Variables for myisamchk

F.4 mysql

F.4.1 Standard Options Supported by mysql

F.4.2 Options Specific to mysql

F.4.3 Variables for mysql

F.4.4 mysql Commands

F.4.5 mysql Prompt Definition Sequences

F.5 mysql.server

F.5.1 Options Supported by mysql.server

F.6 mysql_config

F.6.1 Options Specific to mysql_config

F.7 mysql_install_db

F.7.1 Standard Options Supported by mysql_install_db

F.7.2 Options Specific to mysql_install_db

F.8 mysql_upgrade

F.8.1 Standard Options Supported by mysql_upgrade

F.8.2 Options Specific to mysql_upgrade

F.9 mysqladmin

F.9.1 Standard Options Supported by mysqladmin

F.9.2 Options Specific to mysqladmin

F.9.3 Variables for mysqladmin

F.9.4 mysqladmin Commands

F.10 mysqlbinlog

Table of Contents

F.10.1 Standard Options Supported by mysqlbinlog

F.10.2 Options Specific to mysqlbinlog

F.10.3 Variables for mysqlbinlog

F.11 mysqlcheck

F.11.1 Standard Options Supported by mysqlcheck

F.11.2 Options Specific to mysqlcheck

F.12 mysqld

F.12.1 Standard Options Supported by mysqld

F.12.2 Options Specific to mysqld

F.12.3 Variables for mysqld

F.13 mysqld_multi

F.13.1 Standard Options Supported by mysqld_multi

F.13.2 Options Specific to mysqld_multi

F.14 mysqld_safe

F.14.1 Standard Options Supported by mysqld_safe

F.14.2 Options Specific to mysqld_safe

F.15 mysqldump

F.15.1 Standard Options Supported by mysqldump

F.15.2 Options Specific to mysqldump

F.15.3 Data Format Options for mysqldump

F.15.4 Variables for mysqldump

F.16 mysqlimport

F.16.1 Standard Options Supported by mysqlimport

F.16.2 Options Specific to mysqlimport

F.16.3 Data Format Options for mysqlimport

F.17 mysqlshow

F.17.1 Standard Options Supported by mysqlshow

F.17.2 Options Specific to mysqlshow

F.18 perror

F.18.1 Standard Options Supported by perror

G C API Reference

Table of Contents

G.1 Compiling and Linking

G.2 C API Data Structures

G.2.1 Scalar Data Types

G.2.2 Nonscalar Data Structures

G.2.3 Accessor Macros

G.3 C API Functions

G.3.1 Client Library Initialization and Termination Routines

G.3.2 Connection Management Routines

G.3.3 Error-Reporting Routines

G.3.4 Statement Construction and Execution Routines

G.3.5 Result Set Processing Routines

G.3.6 Multiple Result Set Routines

G.3.7 Information Routines

G.3.8 Transaction Control Routines

G.3.9 Prepared Statement Routines

G.3.10 Administrative Routines

G.3.11 Threaded Client Routines

G.3.12 Debugging Routines

H Perl DBI API Reference

H.1 Writing Scripts

H.2 DBI Methods

H.2.1 DBI Class Methods

H.2.2 Database-Handle Methods

H.2.3 Statement-Handle Methods

H.2.4 General Handle Methods

H.2.5 MySQL-Specific Administrative Methods

H.3 DBI Utility Functions

H.4 DBI Attributes

H.4.1 Database-Handle Attributes

H.4.2 General Handle Attributes

H.4.3 MySQL-Specific Database-Handle Attributes

H.4.4 Statement-Handle Attributes

Table of Contents

H.4.5 MySQL-Specific Statement-Handle Attributes

H.4.6 Dynamic Attributes

H.5 DBI Environment Variables
