

CAPERS JONES

*Forewords by Walker Royce
and Tony Salvaggio*

THE
TECHNICAL AND
SOCIAL HISTORY OF
SOFTWARE ENGINEERING

The Technical and Social History of Software Engineering

The Technical and Social History of Software Engineering

Table of Contents

Contents

Foreword by Walker Royce

Foreword by Tony Salvaggio

Preface

Acknowledgments

About the Author

Chapter 1: Prelude: Computing from Ancient Times to
the Modern Era

The Human Need to Compute

Early Sequence of Numerical Knowledge

Inventions for Improved Mathematics

Mathematics and Calculating

Recording Information

Communicating Information

Storing Information

Enabling Computers and Software

Key Inventions Relevant to Software

Alphabetic Languages

Binary and Decimal Numbers and Zero

Digital Computers

Higher-Level Programming Languages

Table of Contents

Random-Access Storage

The Impact of Software on People and Society

Beneficial Tools and Applications

Harmful Inventions

Weighing the Risks

Summary

Chapter 2: 1930 to 1939: The Foundations of Digital Computing

The First Innovators of Modern Computing

Small Mathematical Applications

Summary

Chapter 3: 1940 to 1949: Computing During World War II and the Postwar Era

Global Conflict and Computing

Wartime Innovations

Analog Computers During World War II

Computers in Germany During World War II

Computers in Japan During World War II

Computers in Poland During World War II

Computers in France During World War II

Computers in Australia During World War II

Computers in Russia During World War II

Computers in Great Britain During World War II

Computers in the United States During World War II

Computers in the Postwar Era

The Cold War Begins

Postwar Computer Development

Table of Contents

Historical Contributions of the Decade

Building Software in 1945

Summary

Chapter 4: 1950 to 1959: Starting the Ascent of Digital Computers and Software

Military and Defense Computers in the 1950s

SAGE

BOMARC

Innovators of the 1950s

Programming Languages of the 1950s

The First Commercial Computers

LEO

IBM

Other Computer Business Implementations

Software Applications in the 1950s

Function Points in 1955

Summary

Chapter 5: 1960 to 1969: The Rise of Business Computers and Business Software

An Evolving Workforce

Early Specialized Outsourcing

Computer Programmers in the 1960s

Becoming a Programmer

A High Demand for Programmers

Emergence of the Software Engineer

IBM System/360

Table of Contents

The Turing Award

The Invention of the Credit Card

Automation and New Professions

The DEC PDP-1

Programming Languages of the 1960s

The Computer Business of the 1960s

Litigation Changes the Computer World Forever

Computers and Software in Space

Computer and Software Growth in the 1960s

Function Points Backfired for 1965

Summary

Chapter 6: 1970 to 1979: Computers and Software

Begin Creating Wealth

Software Evolution in the 1970s

Trends in Software

Political Failures

Rapid Rise of Computer Companies

Major Companies Formed During the 1970s

FedEx

NASDAQ

Southwest Airlines

Computer and Software Companies Formed During the 1970s

Altair Computers

Apple Computer

Baan

Computer Associates (CA)

Table of Contents

Cray Computers
Cullinane
Digital Research
Galorath Incorporated
IMSAI Computers
InterSystems Corporation
Lawson Software
Microsoft
Oracle
Price Systems
Prime Computers (Pr1me)
Systems Applications Programs (SAP)
Tandem Computers
Yourdon, Inc

The Impact of Companies Founded During the 1970s

The Troublesome Growth of Software Applications

Numerous Fragmented Software Subcategories

Advanced and Experimental Software
Business Software
Communications Software
Cybercrime and Hacking Software
Database Software
Education Software
Embedded Software
Gaming and Entertainment Software
Manufacturing Software
Middleware Software
Military Software

Table of Contents

Open-Source Software
Personal Software
Programming Tool Software
Project Management Software
Scientific and Mathematical Software
Security and Protective Software
Social Network Software
Survey Tools Software
Utility Software

A Lawsuit That Changed Computer History
Background Enabling Inventions
Function Points in 1975
Summary

Chapter 7: 1980 to 1989: The Rise of Personal Computers and Personal Software

Rapid Changes in Computing
Companies Formed During the 1980s

Accenture
Adobe
America Online (AOL)
Avira
BlackBerry (Research in Motion, or RIM)
Borland
Computer Aid, Inc. (CAI)
Cisco Systems
Digital Consulting Institute (DCI)
Huawei

Table of Contents

Intuit

KPMG

Lotus

NeXT

PeopleSoft

Rational

SEI

Software Productivity Research (SPR)

Stepstone Corporation

Symantec

TechSoup Global

Wolfram Research

The Growth of Software During the 1980s

Results for 1,000 Function Points Circa 1985

Summary

Chapter 8: 1990 to 1999: Expansion of the World Wide Web and the Rise of Dot-Coms

Emergence of the World Wide Web

Other Innovations of the 1990s

Companies Formed During the 1990s

Akamai

Amazon

Apache

Craigslist

Digital Playground

eBay

GoDaddy

Table of Contents

Google
Heartland Payment Systems
Insight Venture Partners
The ISBSG
Monster.com
Netscape Communications
Priceline
Red Hat Software
Red Storm Entertainment
Sirius Satellite Radio
ThoughtWorks
Visio
VMware

Mass Updates and Aging Legacy Software
Incompatibilities of International Date Formats
The Expansion of Outsourcing
Growth of Software Applications During the 1990s
Results for 1,000 Function Points Circa 1995
Summary

Chapter 9: 2000 to 2009: The Rise of Social Networks and Economic Crises

The Dot-Com Bubble
The Great Recession
Innovations of the 2000s
Companies Formed During the 2000s
AbsolutData Research
Andreesen Horowitz

Table of Contents

Archon Information Systems

Canonical, Ltd

Facebook

Freelanthropy

Global Insight

HIVE Group

Intellectual Ventures

Internet Marketing Association (IMA)

Meeting Zone

Moodys Analytics

Mozilla Foundation

Open Source Development Labs (OSDL)

PerfectMatch

RPX Corporation

SolveIT Software

Twitter

YouTube

Zillow

Growth of Software from 2000 to 2010

Results for 1,000 Function Points Circa 2005

Summary

Chapter 10: 2010 to 2019: Clouds, Crowds, Blogs, Big Data, and Predictive Analytics

Predicting the Future

Professional Status for Software Engineering

Possible Software Engineering Improvements in the 2010s

Companies Formed During the Early 2010s

Table of Contents

AngelPad

Authr

CloudVelocity

CrowdCube

Fiverr

Flattr

Geekli.St

GoFundMe

Namcook Analytics LLC

Nest Labs

Peer Index

Unified Inbox

Yesware

Predicting New Companies and Products from 2013 to 2019

Big Data

Crowd Intelligence and Crowdfunding

Cybercrime and Cybersecurity

Education

Intelligent Agents

Medical Devices

Predictive Analytics

Wearable Computers

Projected Growth of Software from 2010 to 2019

Results for 1,000 Function Points Circa 2015

Summary

Chapter 11: Modern Software Problems

Analysis of Major Software Failures

Table of Contents

1962: Failure of the Mariner 1 Navigation Software
1978: Hartford Coliseum Collapse
1983: Soviet Early Warning System
1986: Therac 25 Radiation Poisoning
1987: Wall Street Crash
1990: AT&T Telephone Lines Shutdown
1991: Patriot Missile Target Error
1993: Intel Pentium Chip Division Problem
1993: Denver Airport Delays
1996: Ariane 5 Rocket Explosion
1998: Mars Climate Orbiter Crash
1999: Failure of the British Passport System
2000: The Y2K Problem
2004: Shutdown of Los Angeles Airport (LAX) Air-Traffic Controls
2005: Failure to Complete the FBI Trilogy Project
2005: Secret Sony Copy Protection Software
2006: Airbus A380 Wiring Problem
2010: McAfee Antivirus Bug Shuts Down Computers
2011: Failed Investment in Studio 38 in Rhode Island
2012: Knight Capital Stock-Trading Software Problems
2012: Automotive Safety Recalls Due to Software

Summary

Chapter 12: A Brief History of Cybercrime and Cyberwarfare

A New Form of Crime

The Hacker Invasion
Preparing Defenses
Increasing Seriousness of Cyberattacks
A Growing Number of Victims

Table of Contents

Types of Cyberattacks

- Bluetooth Hijacking
- Botnets
- Browser Hijacking
- Computer Voting Fraud
- Cyberwarfare Against Civilian Targets
- Data Theft from Corporations
- Data Theft from Unsecured Networks
- Denial of Service Attacks
- Electromagnetic Pulses (EMPs)
- Email Address Harvesting
- Identity Thefts
- Java Vulnerability Attacks
- Keyboard Trackers
- Macro Attacks in Word and Excel Documents
- Pharming
- Phishing
- Rootkits
- Skimming
- Smart Card Hijacking
- Spam
- SQL Injections
- Trojans
- Viruses
- Worms
- Zero-Day Security Attacks

The Odds of Being Attacked

Improving Defenses Against Cyberattacks

Table of Contents

Raising Our Immunity to Cyberattacks

Access Controls

Authentication Controls

EMP Protection

Encryption

Estimating Cyberattack Recovery Costs

Insurance Against Cybertheft and Cyberattack Damages

Secure Programming Languages

The Increasing Frequency and Costs of Cyberattacks in the United States

Summary

Appendix A: Annotated Bibliography and References

Index
