**Preface** 

About the Authors

#### 1 Introduction

- 1.1 An Introduction to Computer Graphics
  - 1.1.1 The World of Computer Graphics
  - 1.1.2 Current and Future Application Areas
  - 1.1.3 User-Interface Considerations
- 1.2 A Brief History
- 1.3 An Illuminating Example
- 1.4 Goals, Resources, and Appropriate Abstractions
  - 1.4.1 Deep Understanding versus Common Practice
- 1.5 Some Numbers and Orders of Magnitude in Graphics
  - 1.5.1 Light Energy and Photon Arrival Rates
  - 1.5.2 Display Characteristics and Resolution of the Eye
  - 1.5.3 Digital Camera Characteristics
  - 1.5.4 Processing Demands of Complex Applications
- 1.6 The Graphics Pipeline
  - 1.6.1 Texture Mapping and Approximation
  - 1.6.2 The More Detailed Graphics Pipeline
- 1.7 Relationship of Graphics to Art, Design, and Perception
- 1.8 Basic Graphics Systems
  - 1.8.1 Graphics Data
- 1.9 Polygon Drawing As a Black Box

- 1.10 Interaction in Graphics Systems
- 1.11 Different Kinds of Graphics Applications
- 1.12 Different Kinds of Graphics Packages
- 1.13 Building Blocks for Realistic Rendering: A Brief Overview
  - 1.13.1 Light
  - 1.13.2 Objects and Materials
  - 1.13.3 Light Capture
  - 1.13.4 Image Display
  - 1.13.5 The Human Visual System
  - 1.13.6 Mathematics
  - 1.13.7 Integration and Sampling
- 1.14 Learning Computer Graphics

#### 2 Introduction to 2D Graphics Using WPF

- 2.1 Introduction
- 2.2 Overview of the 2D Graphics Pipeline
- 2.3 The Evolution of 2D Graphics Platforms
  - 2.3.1 From Integer to Floating-Point Coordinates
  - 2.3.2 Immediate-Mode versus Retained-Mode Platforms
  - 2.3.3 Procedural versus Declarative Specification
- 2.4 Specifying a 2D Scene Using WPF
  - 2.4.1 The Structure of an XAML Application
  - 2.4.2 Specifying the Scene via an Abstract Coordinate System
  - 2.4.3 The Spectrum of Coordinate-System Choices
  - 2.4.4 The WPF Canvas Coordinate System
  - 2.4.5 Using Display Transformations
  - 2.4.6 Creating and Using Modular Templates
- 2.5 Dynamics in 2D Graphics Using WPF
  - 2.5.1 Dynamics via Declarative Animation
  - 2.5.2 Dynamics via Procedural Code
- 2.6 Supporting a Variety of Form Factors
- 2.7 Discussion and Further Reading
- 3 An Ancient Renderer Made Modern

- 3.1 A Dürer Woodcut
- 3.2 Visibility
- 3.3 Implementation
  - 3.3.1 Drawing
- 3.4 The Program
- 3.5 Limitations
- 3.6 Discussion and Further Reading
- 3.7 Exercises

#### 4 A 2D Graphics Test Bed

- 4.1 Introduction
- 4.2 Details of the Test Bed
  - 4.2.1 Using the 2D Test Bed
  - 4.2.2 Corner Cutting
  - 4.2.3 The Structure of a Test-Bed-Based Program
- 4.3 The C# Code
  - 4.3.1 Coordinate Systems
  - 4.3.2 WPF Data Dependencies
  - 4.3.3 Event Handling
  - 4.3.4 Other Geometric Objects
- 4.4 Animation
- 4.5 Interaction
- 4.6 An Application of the Test Bed
- 4.7 Discussion
- 4.8 Exercises

#### 5 An Introduction to Human Visual Perception

- 5.1 Introduction
- 5.2 The Visual System
- 5.3 The Eye
  - 5.3.1 Gross Physiology of the Eye
  - 5.3.2 Receptors in the Eye
- 5.4 Constancy and Its Influences

- 5.5 Continuation
- 5.6 Shadows
- 5.7 Discussion and Further Reading
- 5.8 Exercises

# 6 Introduction to Fixed-Function 3D Graphics and Hierarchical Modeling

- 6.1 Introduction
  - 6.1.1 The Design of WPF 3D
  - 6.1.2 Approximating the Physics of the Interaction of Light with Objects
  - 6.1.3 High-Level Overview of WPF 3D
- 6.2 Introducing Mesh and Lighting Specification
  - 6.2.1 Planning the Scene
  - 6.2.2 Producing More Realistic Lighting
  - 6.2.3 Lighting versus Shading in Fixed-Function Rendering
- 6.3 Curved-Surface Representation and Rendering
  - 6.3.1 Interpolated Shading (Gouraud)
  - 6.3.2 Specifying Surfaces to Achieve Faceted and Smooth Effects
- 6.4 Surface Texture in WPF
  - 6.4.1 Texturing via Tiling
  - 6.4.2 Texturing via Stretching
- 6.5 The WPF Reflectance Model
  - 6.5.1 Color Specification
  - 6.5.2 Light Geometry
  - 6.5.3 Reflectance
- 6.6 Hierarchical Modeling Using a Scene
  - 6.6.1 Motivation for Modular Modeling
  - 6.6.2 Top-Down Design of Component Hierarchy
  - 6.6.3 Bottom-Up Construction and Composition
  - 6.6.4 Reuse of Components
- 6.7 Discussion
- 7 Essential Mathematics and the Geometry of 2-Space and 3-Space

- 7.1 Introduction
- 7.2 Notation
- 7.3 Sets
- 7.4 Functions
  - 7.4.1 Inverse Tangent Functions
- 7.5 Coordinates
- 7.6 Operations on Coordinates
  - 7.6.1 Vectors
  - 7.6.2 How to Think About Vectors
  - 7.6.3 Length of a Vector
  - 7.6.4 Vector Operations
  - 7.6.5 Matrix Multiplication
  - 7.6.6 Other Kinds of Vectors
  - 7.6.7 Implicit Lines
  - 7.6.8 An Implicit Description of a Line in a Plane
  - 7.6.9 What About y = mx + b?
- 7.7 Intersections of Lines
  - 7.7.1 Parametric-Parametric Line Intersection
  - 7.7.2 Parametric-Implicit Line Intersection
- 7.8 Intersections, More Generally
  - 7.8.1 Ray-Plane Intersection
  - 7.8.2 Ray-Sphere Intersection
- 7.9 Triangles
  - 7.9.1 Barycentric Coordinates
  - 7.9.2 Triangles in Space
  - 7.9.3 Half-Planes and Triangles
- 7.10 Polygons
  - 7.10.1 Inside/Outside Testing
  - 7.10.2 Interiors of Nonsimple Polygons
  - 7.10.3 The Signed Area of a Plane Polygon: Divide and Conquer
  - 7.10.4 Normal to a Polygon in Space
  - 7.10.5 Signed Areas for More General Polygons
  - 7.10.6 The Tilting Principle

- 7.10.7 Analogs of Barycentric Coordinates
- 7.11 Discussion
- 7.12 Exercises
- 8 A Simple Way to Describe Shape in 2D and 3D
  - 8.1 Introduction
  - 8.2 Meshes in 2D: Polylines
    - 8.2.1 Boundaries
    - 8.2.2 A Data Structure for 1D Meshes
  - 8.3 Meshes in 3D
    - 8.3.1 Manifold Meshes
    - 8.3.2 Nonmanifold Meshes
    - 8.3.3 Memory Requirements for Mesh Structures
    - 8.3.4 A Few Mesh Operations
    - 8.3.5 Edge Collapse
    - 8.3.6 Edge Swap
  - 8.4 Discussion and Further Reading
  - 8.5 Exercises
- 9 Functions on Meshes
  - 9.1 Introduction
  - 9.2 Code for Barycentric Interpolation
    - 9.2.1 A Different View of Linear Interpolation
    - 9.2.2 Scanline Interpolation
  - 9.3 Limitations of Piecewise Linear Extension
    - 9.3.1 Dependence on Mesh Structure
  - 9.4 Smoother Extensions
    - 9.4.1 Nonconvex Spaces
    - 9.4.2 Which Interpolation Method Should I Really Use?
  - 9.5 Functions Multiply Defined at Vertices
  - 9.6 Application: Texture Mapping
    - 9.6.1 Assignment of Texture Coordinates
    - 9.6.2 Details of Texture Mapping
    - 9.6.3 Texture-Mapping Problems

- 9.7 Discussion
- 9.8 Exercises
- 10 Transformations in Two Dimensions
  - 10.1 Introduction
  - 10.2 Five Examples
  - 10.3 Important Facts about Transformations
    - 10.3.1 Multiplication by a Matrix Is a Linear Transformation
    - 10.3.2 Multiplication by a Matrix Is the Only Linear Transformation
    - 10.3.3 Function Composition and Matrix Multiplication Are Related
    - 10.3.4 Matrix Inverse and Inverse Functions Are Related
    - 10.3.5 Finding the Matrix for a Transformation
    - 10.3.6 Transformations and Coordinate Systems
    - 10.3.7 Matrix Properties and the Singular Value Decomposition
    - 10.3.8 Computing the SVD
    - 10.3.9 The SVD and Pseudoinverses
  - 10.4 Translation
  - 10.5 Points and Vectors Again
  - 10.6 Why Use 3 × 3 Matrices Instead of a Matrix and a Vector?
  - 10.7 Windowing Transformations
  - 10.8 Building 3D Transformations
  - 10.9 Another Example of Building a 2D Transformation
  - 10.10 Coordinate Frames
  - 10.11 Application: Rendering from a Scene Graph
    - 10.11.1 Coordinate Changes in Scene Graphs
  - 10.12 Transforming Vectors and Covectors
    - 10.12.1 Transforming Parametric Lines
  - 10.13 More General Transformations
  - 10.14 Transformations versus Interpolation
  - 10.15 Discussion and Further Reading
  - 10.16 Exercises
- 11 Transformations in Three Dimensions

#### 11.1 Introduction

11.1.1 Projective Transformation Theorems

#### 11.2 Rotations

- 11.2.1 Analogies between Two and Three Dimensions
- 11.2.2 Euler Angles
- 11.2.3 Axis-Angle Description of a Rotation
- 11.2.4 Finding an Axis and Angle from a Rotation Matrix
- 11.2.5 Body-Centered Euler Angles
- 11.2.6 Rotations and the 3-Sphere
- 11.2.7 Stability of Computations
- 11.3 Comparing Representations
- 11.4 Rotations versus Rotation Specifications
- 11.5 Interpolating Matrix Transformations
- 11.6 Virtual Trackball and Arcball
- 11.7 Discussion and Further Reading
- 11.8 Exercises

#### 12 A 2D and 3D Transformation Library for Graphics

- 12.1 Introduction
- 12.2 Points and Vectors
- 12.3 Transformations
  - 12.3.1 Efficiency
- 12.4 Specification of Transformations
- 12.5 Implementation
  - 12.5.1 Projective Transformations
- 12.6 Three Dimensions
- 12.7 Associated Transformations
- 12.8 Other Structures
- 12.9 Other Approaches
- 12.10 Discussion
- 12.11 Exercises
- 13 Camera Specifications and Transformations

- 13.1 Introduction
- 13.2 A 2D Example
- 13.3 Perspective Camera Specification
- 13.4 Building Transformations from a View Specification
- 13.5 Camera Transformations and the Rasterizing Renderer Pipeline
- 13.6 Perspective and z-values
- 13.7 Camera Transformations and the Modeling Hierarchy
- 13.8 Orthographic Cameras
  - 13.8.1 Aspect Ratio and Field of View
- 13.9 Discussion and Further Reading
- 13.10 Exercises

#### 14 Standard Approximations and Representations

- 14.1 Introduction
- 14.2 Evaluating Representations
  - 14.2.1 The Value of Measurement
  - 14.2.2 Legacy Models
- 14.3 Real Numbers
  - 14.3.1 Fixed Point
  - 14.3.2 Floating Point
  - 14.3.3 Buffers
- 14.4 Building Blocks of Ray Optics
  - 14.4.1 Light
  - 14.4.2 Emitters
  - 14.4.3 Light Transport
  - 14.4.4 Matter
  - 14.4.5 Cameras
- 14.5 Large-Scale Object Geometry
  - 14.5.1 Meshes
  - 14.5.2 Implicit Surfaces
  - 14.5.3 Spline Patches and Subdivision Surfaces
  - 14.5.4 Heightfields
  - 14.5.5 Point Sets

#### 14.6 Distant Objects

- 14.6.1 Level of Detail
- 14.6.2 Billboards and Impostors
- 14.6.3 Skyboxes

#### 14.7 Volumetric Models

- 14.7.1 Finite Element Models
- 14.7.2 Voxels
- 14.7.3 Particle Systems
- 14.7.4 Fog

#### 14.8 Scene Graphs

#### 14.9 Material Models

- 14.9.1 Scattering Functions (BSDFs)
- 14.9.2 Lambertian
- 14.9.3 Normalized Blinn-Phong

#### 14.10 Translucency and Blending

- 14.10.1 Blending
- 14.10.2 Partial Coverage ()
- 14.10.3 Transmission
- 14.10.4 Emission
- 14.10.5 Bloom and Lens Flare

#### 14.11 Luminaire Models

- 14.11.1 The Radiance Function
- 14.11.2 Direct and Indirect Light
- 14.11.3 Practical and Artistic Considerations
- 14.11.4 Rectangular Area Light
- 14.11.5 Hemisphere Area Light
- 14.11.6 Omni-Light
- 14.11.7 Directional Light
- 14.11.8 Spot Light
- 14.11.9 A Unified Point-Light Model
- 14.12 Discussion
- 14.13 Exercises

## 15 Ray Casting and Rasterization

#### 15.1 Introduction

#### 15.2 High-Level Design Overview

- 15.2.1 Scattering
- 15.2.2 Visible Points
- 15.2.3 Ray Casting: Pixels First
- 15.2.4 Rasterization: Triangles First

#### 15.3 Implementation Platform

- 15.3.1 Selection Criteria
- 15.3.2 Utility Classes
- 15.3.3 Scene Representation
- 15.3.4 A Test Scene

#### 15.4 A Ray-Casting Renderer

- 15.4.1 Generating an Eye Ray
- 15.4.2 Sampling Framework: Intersect and Shade
- 15.4.3 Ray-Triangle Intersection
- 15.4.4 Debugging
- 15.4.5 Shading
- 15.4.6 Lambertian Scattering
- 15.4.7 Glossy Scattering
- 15.4.8 Shadows
- 15.4.9 A More Complex Scene

#### 15.5 Intermezzo

#### 15.6 Rasterization

- 15.6.1 Swapping the Loops
- 15.6.2 Bounding-Box Optimization
- 15.6.3 Clipping to the Near Plane
- 15.6.4 Increasing Efficiency
- 15.6.5 Rasterizing Shadows
- 15.6.6 Beyond the Bounding Box

#### 15.7 Rendering with a Rasterization API

- 15.7.1 The Graphics Pipeline
- 15.7.2 Interface
- 15.8 Performance and Optimization

- 15.8.1 Abstraction Considerations
- 15.8.2 Architectural Considerations
- 15.8.3 Early-Depth-Test Example
- 15.8.4 When Early Optimization Is Good
- 15.8.5 Improving the Asymptotic Bound
- 15.9 Discussion
- 15.10 Exercises

#### 16 Survey of Real-Time 3D Graphics Platforms

- 16.1 Introduction
  - 16.1.1 Evolution from Fixed-Function to Programmable Rendering Pipeline
- 16.2 The Programmers Model: OpenGL Compatibility (Fixed-Function)

  Profile
  - 16.2.1 OpenGL Program Structure
  - 16.2.2 Initialization and the Main Loop
  - 16.2.3 Lighting and Materials
  - 16.2.4 Geometry Processing
  - 16.2.5 Camera Setup
  - 16.2.6 Drawing Primitives
  - 16.2.7 Putting It All TogetherPart 1: Static Frame
  - 16.2.8 Putting It All TogetherPart 2: Dynamics
  - 16.2.9 Hierarchical Modeling
  - 16.2.10 Pick Correlation
- 16.3 The Programmers Model: OpenGL Programmable Pipeline
  - 16.3.1 Abstract View of a Programmable Pipeline
  - 16.3.2 The Nature of the Core API
- 16.4 Architectures of Graphics Applications
  - 16.4.1 The Application Model
  - 16.4.2 The Application-Model-to-IM-Platform Pipeline (AMIP)
  - 16.4.3 Scene-Graph Middleware
  - 16.4.4 Graphics Application Platforms
- 16.5 3D on Other Platforms
  - 16.5.1 3D on Mobile Devices
  - 16.5.2 3D in Browsers

#### 16.6 Discussion

#### 17 Image Representation and Manipulation

- 17.1 Introduction
- 17.2 What Is an Image?
  - 17.2.1 The Information Stored in an Image
- 17.3 Image File Formats
  - 17.3.1 Choosing an Image Format
- 17.4 Image Compositing
  - 17.4.1 The Meaning of a Pixel During Image Compositing
  - 17.4.2 Computing U over V
  - 17.4.3 Simplifying Compositing
  - 17.4.4 Other Compositing Operations
  - 17.4.5 Physical Units and Compositing
- 17.5 Other Image Types
  - 17.5.1 Nomenclature
- 17.6 MIP Maps
- 17.7 Discussion and Further Reading
- 17.8 Exercises

#### 18 Images and Signal Processing

- 18.1 Introduction
  - 18.1.1 A Broad Overview
  - 18.1.2 Important Terms, Assumptions, and Notation
- 18.2 Historical Motivation
- 18.3 Convolution
- 18.4 Properties of Convolution
- 18.5 Convolution-like Computations
- 18.6 Reconstruction
- 18.7 Function Classes
- 18.8 Sampling
- 18.9 Mathematical Considerations
  - 18.9.1 Frequency-Based Synthesis and Analysis

18.10 The Fourier Transform: Definitions 18.11 The Fourier Transform of a Function on an Interval 18.11.1 Sampling and Band Limiting in an Interval 18.12 Generalizations to Larger Intervals and All of R 18.13 Examples of Fourier Transforms 18.13.1 Basic Examples 18 13 2 The Transform of a Box Is a Since 18.13.3 An Example on an Interval 18.14 An Approximation of Sampling 18.15 Examples Involving Limits 18.15.1 Narrow Boxes and the Delta Function 18.15.2 The Comb Function and Its Transform 18.16 The Inverse Fourier Transform 18.17 Properties of the Fourier Transform 18.18 Applications 18.18.1 Band Limiting 18.18.2 Explaining Replication in the Spectrum 18.19 Reconstruction and Band Limiting 18.20 Aliasing Revisited 18.21 Discussion and Further Reading 18.22 Exercises 19 Enlarging and Shrinking Images 19.1 Introduction 19.2 Enlarging an Image 19.3 Scaling Down an Image 19.4 Making the Algorithms Practical 19.5 Finite-Support Approximations 19.5.1 Practical Band Limiting 19.6 Other Image Operations and Efficiency 19.7 Discussion and Further Reading

19.8 Exercises

#### 20 Textures and Texture Mapping

- 20.1 Introduction
- 20.2 Variations of Texturing
  - 20.2.1 Environment Mapping
  - 20.2.2 Bump Mapping
  - 20.2.3 Contour Drawing
- 20.3 Building Tangent Vectors from a Parameterization
- 20.4 Codomains for Texture Maps
- 20.5 Assigning Texture Coordinates
- 20.6 Application Examples
- 20.7 Sampling, Aliasing, Filtering, and Reconstruction
- 20.8 Texture Synthesis
  - 20.8.1 Fourier-like Synthesis
  - 20.8.2 Perlin Noise
  - 20.8.3 Reaction-Diffusion Textures
- 20.9 Data-Driven Texture Synthesis
- 20.10 Discussion and Further Reading
- 20.11 Exercises

#### 21 Interaction Techniques

- 21.1 Introduction
- 21.2 User Interfaces and Computer Graphics
  - 21.2.1 Prescriptions
  - 21.2.2 Interaction Event Handling
- 21.3 Multitouch Interaction for 2D Manipulation
  - 21.3.1 Defining the Problem
  - 21.3.2 Building the Program
  - 21.3.3 The Interactor
- 21.4 Mouse-Based Object Manipulation in 3D
  - 21.4.1 The Trackball Interface
  - 21.4.2 The Arcball Interface
- 21.5 Mouse-Based Camera Manipulation: Unicam
  - 21.5.1 Translation

- 21.5.2 Rotation
- 21.5.3 Additional Operations
- 21.5.4 Evaluation
- 21.6 Choosing the Best Interface
- 21.7 Some Interface Examples
  - 21.7.1 First-Person-Shooter Controls
  - 21.7.2 3ds Max Transformation Widget
  - 21.7.3 Photoshops Free-Transform Mode
  - 21.7.4 Chateau
  - 21.7.5 Teddy
  - 21.7.6 Grabcut and Selection by Strokes
- 21.8 Discussion and Further Reading
- 21.9 Exercises

#### 22 Splines and Subdivision Curves

- 22.1 Introduction
- 22.2 Basic Polynomial Curves
- 22.3 Fitting a Curve Segment between Two Curves: The Hermite Curve 22.3.1 Bézier Curves
- 22.4 Gluing Together Curves and the Catmull-Rom Spline
  - 22.4.1 Generalization of Catmull-Rom Splines
  - 22.4.2 Applications of Catmull-Rom Splines
- 22.5 Cubic B-splines
  - 22.5.1 Other B-splines
- 22.6 Subdivision Curves
- 22.7 Discussion and Further Reading
- 22.8 Exercises
- 23 Splines and Subdivision Surfaces
  - 23.1 Introduction
  - 23.2 Bézier Patches
  - 23.3 Catmull-Clark Subdivision Surfaces
  - 23.4 Modeling with Subdivision Surfaces
  - 23.5 Discussion and Further Reading

#### 24 Implicit Representations of Shape

- 24.1 Introduction
- 24.2 Implicit Curves
- 24.3 Implicit Surfaces
- 24.4 Representing Implicit Functions
  - 24.4.1 Interpolation Schemes
  - 24.4.2 Splines
  - 24.4.3 Mathematical Models and Sampled Implicit Representations
- 24.5 Other Representations of Implicit Functions
- 24.6 Conversion to Polyhedral Meshes
  - 24.6.1 Marching Cubes
- 24.7 Conversion from Polyhedral Meshes to Implicits
- 24.8 Texturing Implicit Models
  - 24.8.1 Modeling Transformations and Textures
- 24.9 Ray Tracing Implicit Surfaces
- 24.10 Implicit Shapes in Animation
- 24.11 Discussion and Further Reading
- 24.12 Exercises

#### 25 Meshes

- 25.1 Introduction
- 25.2 Mesh Topology
  - 25.2.1 Triangulated Surfaces and Surfaces with Boundary
  - 25.2.2 Computing and Storing Adjacency
  - 25.2.3 More Mesh Terminology
  - 25.2.4 Embedding and Topology
- 25.3 Mesh Geometry
  - 25.3.1 Mesh Meaning
- 25.4 Level of Detail
  - 25.4.1 Progressive Meshes
  - 25.4.2 Other Mesh Simplification Approaches
- 25.5 Mesh Applications 1: Marching Cubes, Mesh Repair, and Mesh Improvement

- 25.5.1 Marching Cubes Variants
- 25.5.2 Mesh Repair
- 25.5.3 Differential or Laplacian Coordinates
- 25.5.4 An Application of Laplacian Coordinates

#### 25.6 Mesh Applications 2: Deformation Transfer and Triangle-Order Optimization

- 25.6.1 Deformation Transfer
- 25.6.2 Triangle Reordering for Hardware Efficiency
- 25.7 Discussion and Further Reading
- 25.8 Exercises

#### 26 Light

- 26.1 Introduction
- 26.2 The Physics of Light
- 26.3 The Microscopic View
- 26.4 The Wave Nature of Light
  - 26.4.1 Diffraction
  - 26.4.2 Polarization
  - 26.4.3 Bending of Light at an Interface

#### 26.5 Fresnels Law and Polarization

26.5.1 Radiance Computations and an Unpolarized Form of Fresnels Equations

#### 26.6 Modeling Light as a Continuous Flow

- 26.6.1 A Brief Introduction to Probability Densities
- 26.6.2 Further Light Modeling
- 26.6.3 Angles and Solid Angles
- 26.6.4 Computations with Solid Angles
- 26.6.5 An Important Change of Variables

#### 26.7 Measuring Light

- 26.7.1 Radiometric Terms
- 26.7.2 Radiance
- 26.7.3 Two Radiance Computations
- 26.7.4 Irradiance
- 26.7.5 Radiant Exitance

	26.7.6 Radiant Power or Radiant Flux
	26.8 Other Measurements
	26.9 The Derivative Approach
	26.10 Reflectance
	26.10.1 Related Terms
	26.10.2 Mirrors, Glass, Reciprocity, and the BRDF
	26.10.3 Writing L in Different Ways
	26.11 Discussion and Further Reading
	26.12 Exercises
27	Materials and Scattering
	27.1 Introduction
	27.2 Object-Level Scattering
	27.3 Surface Scattering
	27.3.1 Impulses
	27.3.2 Types of Scattering Models
	27.3.3 Physical Constraints on Scattering
	27.4 Kinds of Scattering
	27.5 Empirical and Phenomenological Models for Scattering
	27.5.1 Mirror Scattering
	27.5.2 Lambertian Reflectors
	27.5.3 The Phong and Blinn-Phong Models
	27.5.4 The Lafortune Model
	27.5.5 Sampling
	27.6 Measured Models
	27.7 Physical Models for Specular and Diffuse Reflection
	27.8 Physically Based Scattering Models
	27.8.1 The Fresnel Equations, Revisited
	27.8.2 The Torrance-Sparrow Model
	27.8.3 The Cook-Torrance Model
	27.8.4 The Oren-Nayar Model
	27.8.5 Wave Theory Models

27.9 Representation Choices

27.10 Criteria for Evaluation 27.11 Variations across Surfaces 27.12 Suitability for Human Use 27.13 More Complex Scattering 27.13.1 Participating Media 27.13.2 Subsurface Scattering 27.14 Software Interface to Material Models 27.15 Discussion and Further Reading 27.16 Exercises 28 Color 28.1 Introduction 28.1.1 Implications of Color 28.2 Spectral Distribution of Light 28.3 The Phenomenon of Color Perception and the Physiology of the Eye 28.4 The Perception of Color 28.4.1 The Perception of Brightness 28.5 Color Description 28.6 Conventional Color Wisdom 28.6.1 Primary Colors 28.6.2 Purple Isnt a Real Color 28.6.3 Objects Have Colors; You Can Tell by Looking at Them in White Light 28.6.4 Blue and Green Make Cyan 28.6.5 Color Is RGB 28.7 Color Perception Strengths and Weaknesses 28.8 Standard Description of Colors 28.8.1 The CIE Description of Color 28.8.2 Applications of the Chromaticity Diagram 28.9 Perceptual Color Spaces 28.9.1 Variations and Miscellany

28.10 Intermezzo

28.11 White

	Table of Contents
28	8.12 Encoding of Intensity, Exponents, and Gamma Correction
28	8.13 Describing Color
	28.13.1 The RGB Color Model
28	8.14 CMY and CMYK Color
28	8.15 The YIQ Color Model
28	8.16 Video Standards
28	8.17 HSV and HLS
	28.17.1 Color Choice
	28.17.2 Color Palettes
28	8.18 Interpolating Color
28	8.19 Using Color in Computer Graphics
28	8.20 Discussion and Further Reading
28	8.21 Exercises
29 Li	ight Transport
29	9.1 Introduction
29	9.2 Light Transport
	29.2.1 The Rendering Equation, First Version
29	9.3 A Peek Ahead
29	9.4 The Rendering Equation for General Scattering
	29.4.1 The Measurement Equation
29	9.5 Scattering, Revisited
~	0.0.4144

- 29.6 AWorked Example
- 29.7 Solving the Rendering Equation
- 29.8 The Classification of Light-Transport Paths
  - 29.8.1 Perceptually Significant Phenomena and Light Transport
- 29.9 Discussion
- 29.10 Exercise

#### 30 Probability and Monte Carlo Integration

- 30.1 Introduction
- 30.2 Numerical Integration
- 30.3 Random Variables and Randomized Algorithms

30.3.1 Discrete Probability and Its Relationship to Programs 30.3.2 Expected Value 30.3.3 Properties of Expected Value, and Related Terms 30.3.4 Continuum Probability 30.3.5 Probability Density Functions 30.3.6 Application to the Sphere 30.3.7 A Simple Example 30.3.8 Application to Scattering 30.4 Continuum Probability, Continued 30.5 Importance Sampling and Integration 30.6 Mixed Probabilities 30.7 Discussion and Further Reading 30.8 Exercises 31 Computing Solutions to the Rendering Equation: Theoretical Approaches 31.1 Introduction 31.2 Approximate Solutions of Equations 31.3 Method 1: Approximating the Equation 31.4 Method 2: Restricting the Domain 31.5 Method 3: Using Statistical Estimators 31.5.1 Summing a Series by Sampling and Estimation 31.6 Method 4: Bisection 31.7 Other Approaches 31.8 The Rendering Equation, Revisited 31.8.1 A Note on Notation 31.9 What Do We Need to Compute? 31.10 The Discretization Approach: Radiosity 31.11 Separation of Transport Paths 31.12 Series Solution of the Rendering Equation 31.13 Alternative Formulations of Light Transport

31.14 Approximations of the Series Solution

- 31.15 Approximating Scattering: Spherical Harmonics
- 31.16 Introduction to Monte Carlo Approaches
- 31.17 Tracing Paths
- 31.18 Path Tracing and Markov Chains
  - 31.18.1 The Markov Chain Approach
  - 31.18.2 The Recursive Approach
  - 31.18.3 Building a Path Tracer
  - 31.18.4 Multiple Importance Sampling
  - 31.18.5 Bidirectional Path Tracing
  - 31.18.6 Metropolis Light Transport
- 31.19 Photon Mapping
  - 31.19.1 Image-Space Photon Mapping
- 31.20 Discussion and Further Reading
- 31.21 Exercises

#### 32 Rendering in Practice

- 32.1 Introduction
- 32.2 Representations
- 32.3 Surface Representations and Representing BSDFs Locally
  - 32.3.1 Mirrors and Point Lights
- 32.4 Representation of Light
  - 32.4.1 Representation of Luminaires
- 32.5 A Basic Path Tracer
  - 32.5.1 Preliminaries
  - 32.5.2 Path-Tracer Code
  - 32.5.3 Results and Discussion
- 32.6 Photon Mapping
  - 32.6.1 Results and Discussion
  - 32.6.2 Further Photon Mapping
- 32.7 Generalizations
- 32.8 Rendering and Debugging
- 32.9 Discussion and Further Reading
- 32.10 Exercises

#### 33 Shaders

- 33.1 Introduction
- 33.2 The Graphics Pipeline in Several Forms
- 33.3 Historical Development
- 33.4 A Simple Graphics Program with Shaders
- 33.5 A Phong Shader
- 33.6 Environment Mapping
- 33.7 Two Versions of Toon Shading
- 33.8 Basic XToon Shading
- 33.9 Discussion and Further Reading
- 33.10 Exercises

#### 34 Expressive Rendering

- 34.1 Introduction
  - 34.1.1 Examples of Expressive Rendering
  - 34.1.2 Organization of This Chapter
- 34.2 The Challenges of Expressive Rendering
- 34.3 Marks and Strokes
- 34.4 Perception and Salient Features
- 34.5 Geometric Curve Extraction
  - 34.5.1 Ridges and Valleys
  - 34.5.2 Suggestive Contours
  - 34.5.3 Apparent Ridges
  - 34.5.4 Beyond Geometry
- 34.6 Abstraction
- 34.7 Discussion and Further Reading

#### 35 Motion

- 35.1 Introduction
- 35.2 Motivating Examples
  - 35.2.1 A Walking Character (Key Poses)
  - 35.2.2 Firing a Cannon (Simulation)
  - 35.2.3 Navigating Corridors (Motion Planning)

_	_			
っに	$^{\circ}$	1	Notation	•
. 7: 1	_	4	INCHAILOR	

#### 35.3 Considerations for Rendering

- 35.3.1 Double Buffering
- 35.3.2 Motion Perception
- 35.3.3 Interlacing
- 35.3.4 Temporal Aliasing and Motion Blur
- 35.3.5 Exploiting Temporal Coherence
- 35.3.6 The Problem of the First Frame
- 35.3.7 The Burden of Temporal Coherence

#### 35.4 Representations

- 35.4.1 Objects
- 35.4.2 Limiting Degrees of Freedom
- 35.4.3 Key Poses
- 35.4.4 Dynamics
- 35.4.5 Procedural Animation
- 35.4.6 Hybrid Control Schemes

#### 35.5 Pose Interpolation

- 35.5.1 Vertex Animation
- 35.5.2 Root Frame Motion
- 35.5.3 Articulated Body
- 35.5.4 Skeletal Animation

#### 35.6 Dynamics

- 35.6.1 Particle
- 35.6.2 Differential Equation Formulation
- 35.6.3 Piecewise-Constant Approximation
- 35.6.4 Models of Common Forces
- 35.6.5 Particle Collisions
- 35.6.6 Dynamics as a Differential Equation
- 35.6.7 Numerical Methods for ODEs
- 35.7 Remarks on Stability in Dynamics
- 35.8 Discussion

#### 36 Visibility Determination

36.1 Introduction

36.1.1 The Visibility Fu	unction
36.1.2 Primary Visibilit	ty
36.1.3 (Binary) Covera	age
36.1.4 Current Practic	e and Motivation
36.2 Ray Casting	
36.2.1 BSP Ray-Primi	tive Intersection
36.2.2 Parallel Evalua	tion of Ray Tests
36.3 The Depth Buffer	
36.3.1 Common Depth	n Buffer Encodings
36.4 List-Priority Algor	ithms
36.4.1 The Painters A	lgorithm
36.4.2 The Depth-Sort	t Algorithm
36.4.3 Clusters and B	SP Sort
36.5 Frustum Culling a	and Clipping
36.5.1 Frustum Culling	9
36.5.2 Clipping	
36.5.3 Clipping to the	Whole Frustum
36.6 Backface Culling	
36.7 Hierarchical Occl	usion Culling
36.8 Sector-based Co	nservative Visibility
36.8.1 Stabbing Trees	<b>;</b>
36.8.2 Portals and Mir	rors
36.9 Partial Coverage	
36.9.1 Spatial Antialia	sing (xy)
36.9.2 Defocus (uv)	
36.9.3 Motion Blur (t)	
36.9.4 Coverage as a	Material Property ()
36.10 Discussion and	Further Reading
36.11 Exercise	
37 Spatial Data Struct	ures
37.1 Introduction	
37.1.1 Motivating Example	mples
37.2 Programmatic Int	erfaces

- 37.2.1 Intersection Methods
- 37.2.2 Extracting Keys and Bounds
- 37.3 Characterizing Data Structures
  - 37.3.1 1D Linked List Example
  - 37.3.2 1D Tree Example
- 37.4 Overview of kd Structures
- 37.5 List
- 37.6 Trees
  - 37.6.1 Binary Space Partition (BSP) Trees
  - 37.6.2 Building BSP Trees: oct tree, quad tree, BSP tree, kd tree
  - 37.6.3 Bounding Volume Hierarchy
- 37.7 Grid
  - 37.7.1 Construction
  - 37.7.2 Ray Intersection
  - 37.7.3 Selecting Grid Resolution
- 37.8 Discussion and Further Reading

#### 38 Modern Graphics Hardware

- 38.1 Introduction
- 38.2 NVIDIA GeForce 9800 GTX
- 38.3 Architecture and Implementation
  - 38.3.1 GPU Architecture
  - 38.3.2 GPU Implementation
- 38.4 Parallelism
- 38.5 Programmability
- 38.6 Texture, Memory, and Latency
  - 38.6.1 Texture Mapping
  - 38.6.2 Memory Basics
  - 38.6.3 Coping with Latency
- 38.7 Locality
  - 38.7.1 Locality of Reference
  - 38.7.2 Cache Memory
  - 38.7.3 Divergence

38.8 Organizational Alternatives

38.8.1 Deferred Shading

38.8.2 Binned Rendering

38.8.3 Larrabee: A CPU/GPU Hybrid

38.9 GPUs as Compute Engines

38.10 Discussion and Further Reading

38.11 Exercises

List of Principles
