Objective-C Programming: The Big Nerd Ranch Guide

Table of Contents

Table of Contents

I. Getting Started

1. You and This Book

C and Objective-C

How this book works

How the life of a programmer works

2. Your First Program

Installing Apples developer tools

Getting started with Xcode

Where do I start writing code?

How do I run my program?

So, what is a program?

Dont stop

II. How Programming Works

3. Variables and Types

Types

A program with variables

Challenge

4. if/else

Boolean variables

When curly braces are optional

else if

For the more curious: conditional operators

Challenge

5. Functions

When should I use a function?

How do I write and use a function?

Table of Contents

How functions work together
Local variables, frames, and the stack
Scope
Recursion
Looking at frames in the debugger
return
Global and static variables
Challenge

6. Format Strings

Using tokens
Escape sequences
Challenge

7. Numbers

Integers
Floating-point numbers
Challenge
A note about comments

8. Loops

The while loop
The for loop
break
continue
The do-while loop
Challenge: counting down
Challenge: user input

9. Addresses and Pointers

Getting addresses
Storing addresses in pointers
Getting the data at an address
How many bytes?
NULL
Stylish pointer declarations
Challenge: how much memory?

Table of Contents

Challenge: how much range?

10. Pass-By-Reference

Writing pass-by-reference functions

Avoid dereferencing NULL

Challenge

11. Structs

Challenge

12. The Heap

III. Objective-C and Foundation

13. Objects

Objects

Methods and messages

Challenge

14. More Messages

A message with an argument

Multiple arguments

Nesting message sends

alloc and init

Sending messages to nil

id

Challenge

15. Objects and Memory

On pointers and their values

Memory management

16. NSString

Creating instances of NSString

NSString methods

Class references

Other parts of the documentation

Challenge: finding more NSString methods

Challenge: using readline()

17. NSArray

Creating arrays

Table of Contents

- Accessing arrays
- Iterating over arrays
- NSMutableArray
- Old-style array methods
- Challenge: a grocery list
- Challenge: interesting names

18. Your First Class

- Accessor methods
- self
- Multiple files
- Class prefixes
- Challenge

19. Properties

- Declaring properties
- Property attributes
- Dot notation

20. Inheritance

- Overriding methods
- super
- Inheritance hierarchy
- description and %@
- Challenge

21. Object Instance Variables and Properties

- Object ownership and ARC
- Challenge: holding portfolio
- Challenge: removing assets

22. Class Extensions

- Hiding mutability
- Headers and inheritance
- Headers and generated instance variables
- Challenge

23. Preventing Memory Leaks

- Strong reference cycles

Table of Contents

Weak references

Zeroing of weak references

For the More Curious: manual reference counting and ARC history

24. Collection Classes

NSSet/NSMutableSet

NSDictionary/NSMutableDictionary

Immutable objects

Sorting arrays

Filtering

Collections and ownership

C primitive types

Collections and nil

Challenge: reading up

Challenge: top holdings

Challenge: sorted holdings

25. Constants

Preprocessor directives

Global variables

enum

#define vs. global variables

26. Writing Files with NSString and NSData

Writing an NSString to a file

NSError

Reading files with NSString

Writing an NSData object to a file

Reading an NSData from a file

Finding special directories

27. Callbacks

The run loop

Target-action

Helper objects

Notifications

Which to use?

Table of Contents

Callbacks and object ownership

For the more curious: how selectors work

28. Blocks

Using blocks

Blocks vs. other callbacks

More on blocks

Challenge: an anonymous block

Challenge: using a block with NSNotificationCenter

29. Protocols

Calling optional methods

30. Property Lists

Challenge

IV. Event-Driven Applications

31. Your First iOS Application

GUI-based applications

Getting started with iTahDoodle

BNRAppDelegate

Model-View-Controller

The application delegate

Setting up views

Running on the iOS simulator

Wiring up the button

Wiring up the table view

Saving and loading data

For the more curious: what about main()?

For the more curious: running iTahDoodle on a device

32. Your First Cocoa Application

Getting started with TahDoodle

Setting up views in Interface Builder

Making connections

Implementing NSTableViewDataSource

Saving and loading data

Challenge

Table of Contents

V. Advanced Objective-C

33. init

Writing init methods

A basic init method

init methods that take arguments

Using accessors

Multiple initializers

Deadly init methods

34. More about Properties

More on property attributes

Implementing accessor methods

35. Key-Value coding

Non-object types

Key paths

36. Key-Value Observing

Using the context in KVO

Triggering the notification explicitly

Dependent properties

37. Categories

Challenge

VI. Advanced C

38. Bitwise Operations

Bitwise-OR

Bitwise-AND

Other bitwise operators

Using enum to define bit masks

More bytes

Challenge

39. C Strings

char

char *

String literals

Converting to and from NSString

Table of Contents

Challenge

40. C Arrays

Challenge

41. Running from the Command Line

Command-line arguments

More convenient running from the command-line

42. Switch Statements

Appendix: The Objective-C Runtime

Introspection

Dynamic method lookup and execution

Management of classes and inheritance hierarchies

How KVO works

Final notes

Challenge: instance variables

Next Steps
