

# LEARNING **CORE DATA** FOR iOS WITH **SWIFT**

A Hands-On Guide to Building Core Data Applications

TIM ROADLEY

# Learning Core Data for iOS with Swift

# Learning Core Data for iOS with Swift: A Hands-On Guide to Building Core Data Applications

## Table of Contents

### Table of Contents

#### Preface

#### 1 Your First Core Data Application

##### What Is Core Data?

Persistent Store Coordinator

Managed Object Model

Managed Object Context

##### When to Use Core Data

##### Introducing the Groceries Application

##### Adding Core Data to an Existing Application

Implementing the Core Data Helper

Adding Paths

Adding the Core Data Stack

Adding the Setup Section

Adding the Saving Section

##### Adding a Managed Object Model File

##### Summary

##### Exercises

#### 2 Managed Object Model Basics

##### What Is a Managed Object Model?

# Table of Contents

Entities

Attributes

Integer 16/32/64

Float and Double

- Decimal

- String

- Boolean

- Date

- Binary Data

- Transformable

Attribute Settings

Subclassing NSObject

Scalar Properties for Primitive Data Types

Introducing the Demo Function

Creating a Managed Object

Backend SQL Visibility

Fetching Managed Objects

- Sorting Fetch Requests

- Filtering Fetch Requests

- Fetch Request Templates

Deleting Managed Objects

Summary

Exercises

## 3 Managed Object Model Migration

Changing a Managed Object Model

Adding a Model Version

Lightweight Migration

# **Table of Contents**

Default Migration

Migration Manager

Introducing MigrationVC.swift (Migration View Controller Code)

Introducing CDMigration.swift (Core Data Migration Code)

Summary

Exercises

## **4 Managed Object Model Expansion**

Relationships

Delete Rules

Introducing CDOperation.swift (Core Data Operation)

Delete Rule Testing

Entity Inheritance

Summary

Exercises

## **5 Table Views**

Table View Basics

Core Data Table Views

Introducing CDTableViewController

Expanding CDTableViewController

DATASOURCE: UITableView

DELEGATE: NSFetchedResultsController

CDTableViewController Subclasses

Enhancing PrepareTVC

Preparing Test Data

Deletion and Cell Selection for PrepareTVC

Interaction for PrepareTVC

Introducing ShopTVC

# **Table of Contents**

Cell Selection for ShopTVC

INTERACTION for ShopTVC

Summary

Exercises

## **6 Views**

View Basics

The Target View Hierarchy

Introducing ItemVC

Keeping Reference to a Selected Item

Passing a Selected Item to ItemVC

Configuring the Scroll View and Text Fields

Implementing ItemVC

DELEGATE: UITextField

The VIEW Section

Adding Functionality to NSObject Subclasses

Units, Home Locations, and Shop Locations

Adding and Editing Units

Implementing UnitsTVC

Implementing UnitVC

Segueing from UnitsTVC to UnitVC

Adding and Editing Home or Shop Locations

Configuring the Home Location Views

Configuring the Shop Location Views

Summary

Exercises

## **7 Picker Views**

Picker View Basics

# **Table of Contents**

Introducing CDPickerViewTextField

Introducing UIPickerViewTF

- Creating the Unit Picker

- Connecting the Unit Picker

- Configuring ItemVC for the Unit Picker

Introducing LocationAtHomePickerTF

Introducing LocationAtShopPickerTF

Using the Location Pickers

- Connecting the Location Pickers

- Configuring ItemVC for the Location Pickers

Picker-Avoiding Text Field

Summary

Exercises

## **8 Preloading Data**

Including Default Data

Indicating Whether an Import Is Required

Importing from XML

Creating an Import Context

Preventing Duplicate Default Data

Triggering a Default Data Import

Finding or Creating Managed Objects

Mapping XML Data to Entity Attributes

Importing from a Persistent Store

- Using the Default Data Store as the Initial Store

Summary

Exercises

# **Table of Contents**

## **9 Deep Copy**

The Deep Copy Process

Configuring a Source Stack

Configuring the Source Coordinator

Configuring the Source Context

Configuring the Source Store

Enhancing CDImporter

Identifying Unique Attributes

Object Info

Copying a Unique Object

Establishing a To-One Relationship

Establishing a To-Many Relationship

Establishing an Ordered To-Many Relationship

Copying Relationships

Deep Copy Entities

Triggering a Deep Copy

Summary

Exercises

## **10 Performance**

Identifying Performance Issues

Implementing the Camera

Implementing the Image Picker Controller Delegates

Generating Test Data

Merge Policies

Measuring Performance with SQLDebug

Measuring Performance with Instruments

Improving Performance

# **Table of Contents**

Model Optimization

Handling Large Objects

Cleaning Up

Summary

Exercises

## **11 Background Processing**

Implementing Background Save

Configuring an Import Context Parent

Faulting Objects

Generating Thumbnails

Summary

Exercises

## **12 Search**

Updating CDTableViewController

Updating PrepareTVC

Search Optimization

Summary

Exercises

## **13 iCloud**

iCloud Basics

Enabling iCloud

Updating CDHelper for iCloud

Adding an iCloud Store

Handling iCloud Notifications

The Debug Navigator

Summary

# **Table of Contents**

Exercises

## **14 Taming iCloud**

De-Duplication

Identifying Duplicates

Deleting Duplicates

Triggering De-Duplication

Seeding

Preparing Seed Variables

Adding Seed Helper Functions

Developing with a Clean Slate

Configurations

Summary

Exercises

## **15 CloudKit Sync: Uploading Objects**

Introducing CloudKit

CloudKit Database Synchronization Limitations

Introducing CDCloudSync

Public Data Groups

Cache Status

CloudKit Building Blocks

Uploading New Records and Relationships

Adding Synchronization Logic

Preparing the Managed Object Model for Sync

Summary

Exercises

## **16 CloudKit Sync: Downloading Changes and Handling**

# **Table of Contents**

## **Deletions**

CloudKit Building Blocks (Continued)

Change Synchronization

Deletion Synchronization

Quality Assurance

Testing the Network

Updating Synchronization Logic

Adding CDCloudSync to Your Own Applications

Summary

Exercises

Thank You!

## **A: Preparing the Groceries Application**

New Xcode Project

Storyboard Design

App Icons and Launch Images

Introducing GenericVC

## **B: Finalizing the Groceries Application**

New Features

Photo Library and Photo Deletion Support

Favorites

Icon Badge

Location De-Duplication Logic
