About the Author

PART I: Metal Basics

Chapter 1 What Is Metal?

History of Graphics APIs

Metal: The New Way to Do Graphics on Apple Platforms

Balancing Work between the CPU and the GPU

Copying Memory

Direct Control of the Command Buffer

Precompiled Shaders

Prevalidated State

Metal in Context: How Metal Complements and Supports Other Platform Frameworks

Summary

Chapter 2 Overview of Rendering and Raster Graphics

Representing the GPU

Render State Configuration

Preparing Data for the GPU

Table of Contents

- Vertex Shading
- Clipping
- Primitive Assembly
- Rasterization
- Fragment Shading
- Raster Output

Summary

Chapter 3 Your First Metal Application (Hello, Triangle!)

- Creating a Metal Application in Xcode (without Using a Template)

 - Creating a Project in Xcode

- Creating a MTLDevice

- Creating a CAMetalLayer

- Creating a Vertex Buffer

- A First Look at Shaders

 - Creating a Vertex Shader

 - Creating a Fragment Shader

- Libraries, Functions, and Pipeline States

- Introducing Render Passes

 - Command Queue and Command Encoder

 - Issuing Draw Calls

 - Presenting Metal Content to the Screen

- Introducing MetalKit Features and MTKView

Summary

PART II: Rendering and Graphics

Chapter 4 Essential Mathematics for Graphics

- Language of Mathematics

- Coordinate Spaces and Moving among Them

- Points, Vectors, and Vector Operations

- Normalization and Unit Vectors

- Pythagorean Theorem

- Sine, Cosine, and Tangent

Table of Contents

Matrices and Matrix Operations

- Identity Matrix

Transformations: Scale, Translation, Rotation, Projection

- Scale Matrix

- Translation Matrix

- Rotation Matrix

- Projection Matrix

- Concatenation

Summary

Chapter 5 Introduction to Shaders

- Metal Shading Language Overview

- Setting Up Shaders

- Your First Shader: Pass Through

- Writing Your First Shader

- Per-Vertex Lighting

- Model I/O Vertex Buffer

- Uniform Buffer

- Vertex Shader

- Fragment Shader

Summary

Chapter 6 Metal Resources and Memory Management

- Introduction to Resources in Metal

- The Argument Table: Mapping between Shader Parameters and Resources

- Buffers

- Resource Options: Storage Mode, Cache Mode, Purgeability

- Preparing Data for the Vertex Shader and Vertex Descriptors

- Copying to and from Buffers

- Introduction to Textures

- Loading Image Data with MTKTextureLoader

- Texture Views

- Texture Arrays

Table of Contents

Copying to and from Textures

Compressed Texture Support

The Blit Command Encoder

Generating Mipmaps

Summary

Chapter 7 Libraries, Functions, and Pipeline States

What Are Libraries and Functions?

The Metal Two-Phase Compilation Architecture

Creating Libraries at Compile Time and Runtime

 Loading Functions from a Library

Command Encoders

Render Pipeline Descriptors and State

Pipeline Reflection

Summary

Chapter 8 2D Drawing

Metal Graphics Rendering Pipeline

Sample Project: Build a Star

 Creating Complex Shapes with Triangles and Meshes

Metal Primitive Types

Responding to MTKViewDelegate Methods

Retrieving a Drawable

Creating a Command Buffer

Creating a Command Encoder

Fixed-Function State on the Command Encoder

Passing Data to Shaders

Issuing Draw Calls

Scheduling and Enqueuing Command Buffers

 Getting Notification of Frame Completion

 Presenting to the Screen

Summary

Table of Contents

Chapter 9 Introduction to 3D Drawing

Model-View-Projection Transformations

Clip Space and the View Frustum

Shading Models

Flat Shading

Gouraud Shading

Phong Shading

Basic Lighting

Ambient

Directional Diffuse

Directional Specular

Animation

Summary

Chapter 10 Advanced 3D Drawing

Constructing a Hierarchical World with Scene Graphs

Instanced Rendering

Ring Buffer

Per-Frame Data

Per-Object Data

Summary

Chapter 11 Interfacing with Model I/O

What Are Model Files?

Reading a File Format

Importing a Model

Meshes and Submeshes

Render State Pipeline

Asset Initialization

Render State Setup and Drawing

Exporting Files

Summary

Table of Contents

Chapter 12 Texturing and Sampling

Texture Mapping

Mipmapping

Sampling

Address Modes

Filter Modes

Anisotropy

Precompiled Sampler States

Passing Textures and Samplers to Graphics Functions

Creating a Texture

Metal Texture Functions

Summary

Chapter 13 Multipass Rendering Techniques

When (and Why) to Use Multipass Rendering

Metal Render Pass Descriptors

Creating and Managing Render Targets

Revisiting Load-Store Actions

Summary

Chapter 14 Geometry Unleashed: Tessellation in Metal

Removing Bottlenecks by Using Tessellation

Catmull-Clark Subdivision

Per-Patch Tessellation Factors

Metal Tessellation Fixed-Function Pipeline

Setting Up a Tessellation Kernel

Post-Tessellation Vertex Function

Draw Patches

Summary

PART III: Data Parallel Programming

Chapter 15 The Metal Compute Pipeline

Table of Contents

Introduction to GPU Programming

Concurrency versus Parallelism

Using GPUs for General Computation

Kernel Functions

The Metal Compute Command Encoder

 Creating a Compute Pipeline State

Issuing Grids of Work

 Thread Groups

Finding Your Way in the Grid inside the Kernel Function

Reading and Writing Resources in Kernel Functions

Summary

Chapter 16 Image Processing in Metal

 Introduction to Image Processing

 Creating a Metal Texture

 Desaturation Kernels

 Convolution and Dispatching a 2D Grid

 Blur Effects

 Selecting an Optimal Threadgroup Size

 Summary

Chapter 17 Machine Vision

 How a Computer Sees the World

 Noise and Smoothing

 Sobel Edge Detection

 Thresholding

 Histograms

 Facial Recognition

 Viola-Jones Object Detection

 Haar Feature Selection

 Creating an Integral Image

 AdaBoost Training

Table of Contents

Cascading Classifiers

Summary

Chapter 18 Metal Performance Shaders Framework

Overview of Metal Performance Shaders Framework

Image Processing with the MPS Framework

Common Settable Properties

Morphological Image Filters

Convolution Image Filters

Histogram Image Filters

Image Threshold Filters

Image Integral Filters

Image Manipulation Filters

Image Statistics Filters

Image Arithmetic Filters

Keypoints

Matrix Operations with MPS

Matrices and Vectors

Multiplying Matrix Operations

Summary

Chapter 19 Neural Network Concepts

Overview of Neural Networks

Neural Network Components

Perceptrons

Biases

Sigmoid Neurons

Learning and Training

Training Sets and Back Propagation

Neural Network Architecture

Summary

Chapter 20 Convolutional Neural Networks

History of Convolutional Neural Networks

Table of Contents

MPSImage

- Convolutional Neural Network Kernels

- Convolution Layer

- Pooling Layer

- Fully Connected Layer

Convolution Data Source

Neural Network Graph

Summary

Index
