Foreword

Introduction

Part I: Introduction to Troubleshooting Nexus Switches

Chapter 1 Introduction to Nexus Operating System (NX-OS)

Nexus Platforms Overview

Nexus 2000 Series

Nexus 3000 Series

Nexus 5000 Series

Nexus 6000 Series

Nexus 7000 Series

Nexus 9000 Series

NX-OS Architecture

The Kernel

System Manager (sysmgr)

Messages and Transactional Services

Persistent Storage Services

# Table of Contents

Feature Manager

NX-OS Line Card Microcode

File Systems

Flash File System

Onboard Failure Logging

Logflash

## Understanding NX-OS Software Releases and Packaging

Software Maintenance Upgrades

Licensing

## NX-OS High-Availability Infrastructure

Supervisor Redundancy

ISSU

## NX-OS Virtualization Features

Virtual Device Contexts

Virtual Routing and Forwarding

Virtual Port Channel

## Management and Operations Capabilities

NX-OS Advanced CLI

Technical Support Files

Accounting Log

Feature Event-History

Debug Options: Log File and Filters

Configuration Checkpoint and Rollback

Consistency Checkers

Feature Scheduler, EEM, and Python

Bash Shell

## Summary

## References

## Chapter 2 NX-OS Troubleshooting Tools

### Packet Capture: Network Sniffer

Encapsulated Remote SPAN

SPAN on Latency and Drop

# Table of Contents

SPAN-on-Latency

SPAN-on-Drop

## Nexus Platform Tools

Etheralyzer

Packet Tracer

## NetFlow

NetFlow Configuration

Enable NetFlow Feature

Define a Flow Record

Define a Flow Exporter

Define and Apply the Flow Monitor

NetFlow Sampling

sFlow

## Network Time Protocol

## Embedded Event Manager

## Logging

Debug Logfiles

Accounting Log

Event-History

## Summary

## References

## Chapter 3 Troubleshooting Nexus Platform Issues

### Troubleshooting Hardware Issues

Generic Online Diagnostic Tests

Bootup Diagnostics

Runtime Diagnostics

GOLD Test and EEM Support

Nexus Device Health Checks

Hardware and Process Crashes

Packet Loss

Interface Errors and Drops

Platform-Specific Drops

# Table of Contents

Nexus Fabric Extenders

## Virtual Device Context

VDC Resource Template

Configuring VDC

VDC Initialization

Out-of-Band and In-Band Management

VDC Management

Line Card Interop Limitations

## Troubleshooting NX-OS System Components

Message and Transaction Services

Netstack and Packet Manager

Netstack TCPUDP Component

ARP and Adjacency Manager

Unicast Forwarding Components

Unicast Routing Information Base

UFDM and IPFIB

EthPM and Port-Client

## HWRL, CoPP, and System QoS

MTU Settings

FEX Jumbo MTU Settings

Troubleshooting MTU Issues

## Summary

## References

# Part II: Troubleshooting Layer 2 Forwarding

## Chapter 4 Nexus Switching

### Network Layer 2 Communication Overview

#### Virtual LANs

VLAN Creation

Access Ports

Trunk Ports

Native VLANs

Allowed VLANs

# Table of Contents

Private VLANs

Isolated Private VLANs

Community Private VLANs

Using a Promiscuous PVLAN Port on Switched Virtual Interface

Trunking PVLANS Between Switches

## Spanning Tree Protocol Fundamentals

IEEE 802.1D Spanning Tree Protocol

Rapid Spanning Tree Protocol

Spanning-Tree Path Cost

Root Bridge Election

Locating Root Ports

Locating Blocked Switch Ports

Verification of VLANs on Trunk Links

Spanning Tree Protocol Tuning

Multiple Spanning-Tree Protocol (MST)

MST Configuration

MST Verification

MST Tuning

## Detecting and Remediating Forwarding Loops

MAC Address Notifications

BPDU Guard

BPDU Filter

Problems with Unidirectional Links

Spanning Tree Protocol Loop Guard

Unidirectional Link Detection

Bridge Assurance

## Summary

## References

## Chapter 5 Port-Channels, Virtual Port-Channels, and FabricPath

### Port-Channels

Basic Port-Channel Configuration

Verifying Port-Channel Status

Verifying LACP Packets

# Table of Contents

- Advanced LACP Configuration Options
- Minimum Number of Port-Channel Member Interfaces
- Maximum Number of Port-Channel Member Interfaces
- LACP System Priority
- LACP Interface Priority
- LACP Fast
- Graceful Convergence
- Suspend Individual
- Port-Channel Member Interface Consistency
- Troubleshooting LACP Interface Establishment
- Troubleshooting Traffic Load-Balancing

## Virtual Port-Channel

- vPC Fundamentals
- vPC Domain
- vPC Peer-Keepalive
- vPC Peer Link
- vPC Member Links
- vPC Operational Behavior
- vPC Configuration
- vPC Verification
- Verifying the vPC Domain Status
- Verifying the Peer-Keepalive
- vPC Consistency-Checker
- Advanced vPC Features
- vPC Orphan Ports
- vPC Autorecovery
- vPC Peer-Gateway
- vPC ARP Synchronization
- Backup Layer 3 Routing
- Layer 3 Routing over vPC

## FabricPath

- FabricPath Terminologies and Components
- FabricPath Packet Flow

# Table of Contents

FabricPath Configuration

FabricPath Verification and Troubleshooting

FabricPath Devices

Emulated Switch and vPC+

vPC+ Configuration

vPC+ Verification and Troubleshooting

Summary

References

## Part III: Troubleshooting Layer 3 Routing

### Chapter 6 Troubleshooting IP and IPv6 Services

#### IP SLA

ICMP Echo Probe

UDP Echo Probe

UDP Jitter Probe

TCP Connect Probe

#### Object Tracking

Object Tracking for the Interface

Object Tracking for Route State

Object Tracking for Track-List State

Using Track Objects with Static Routes

#### IPv4 Services

DHCP Relay

DHCP Snooping

Dynamic ARP Inspection

ARP ACLs

IP Source Guard

Unicast RPF

#### IPv6 Services

Neighbor Discovery

IPv6 Address Assignment

DHCPv6 Relay Agent

DHCPv6 Relay LDRA

# Table of Contents

IPv6 First-Hop Security

RA Guard

IPv6 Snooping

DHCPv6 Guard

## First-Hop Redundancy Protocol

HSRP

HSRPv6

VRRP

GLBP

## Summary

## Chapter 7 Troubleshooting Enhanced Interior Gateway Routing Protocol (EIGRP)

### EIGRP Fundamentals

Topology Table

Path Metric Calculation

EIGRP Communication

Baseline EIGRP Configuration

### Troubleshooting EIGRP Neighbor Adjacency

Verification of Active Interfaces

Passive Interface

Verification of EIGRP Packets

Connectivity Must Exist Using the Primary Subnet

EIGRP ASN Mismatch

Mismatch K Values

Problems with Hello and Hold Timers

EIGRP Authentication Issues

Interface-Based EIGRP Authentication

Global EIGRP Authentication

### Troubleshooting Path Selection and Missing Routes

Load Balancing

Stub

Maximum-Hops

# Table of Contents

Distribute List

Offset Lists

Interface-Based Settings

Redistribution

Classic Metrics vs. Wide Metrics

## Problems with Convergence

Active Query

Stuck in Active

## Summary

## References

## Chapter 8 Troubleshooting Open Shortest Path First (OSPF)

### OSPF Fundamentals

Inter-Router Communication

OSPF Hello Packets

Neighbor States

Designated Routers

Areas

Link State Advertisements

### Troubleshooting OSPF Neighbor Adjacency

Baseline OSPF Configuration

OSPF Neighbor Verification

Confirmation of OSPF Interfaces

Passive Interface

Verification of OSPF Packets

Connectivity Must Exist Using the Primary Subnet

MTU Requirements

Unique Router-ID

Interface Area Numbers Must Match

OSPF Stub (Area Flags) Settings Must Match

DR Requirements

Timers

Authentication

### Troubleshooting Missing Routes

# **Table of Contents**

Discontiguous Network

Duplicate Router ID

Filtering Routes

Redistribution

OSPF Forwarding Address

## **Troubleshooting OSPF Path Selection**

Intra-Area Routes

Inter-Area Routes

External Route Selection

E1 and N1 External Routes

E2 and N2 External Routes

Problems with Intermixed RFC 1583 and RFC 2328 Devices

Interface Link Costs

## **Summary**

## **References**

## **Chapter 9 Troubleshooting Intermediate System-Intermediate System (IS-IS)**

### **IS-IS Fundamentals**

Areas

NET Addressing

Inter-Router Communication

IS Protocol Header

TLVs

IS PDU Addressing

IS-IS Hello (IIH) Packets

Link-State Packets

LSP ID

Attribute Fields

LSP Packet and TLVs

Designated Intermediate System

Path Selection

### **Troubleshooting IS-IS Neighbor Adjacency**

# Table of Contents

- Baseline IS-IS Configuration
- IS-IS Neighbor Verification
- Confirmation of IS-IS Interfaces
- Passive Interface
- Verification of IS-IS Packets
- Connectivity Must Exist Using the Primary Subnet
- MTU Requirements
- Unique System-ID
- Area Must Match Between L1 Adjacencies
- Checking IS-IS Adjacency Capabilities
- DIS Requirements
- IIH Authentication

## Troubleshooting Missing Routes

- Duplicate System ID
- Interface Link Costs
- Mismatch of Metric Modes
- L1 to L2 Route Propagations
- Suboptimal Routing
- Redistribution

## Summary

## References

## Chapter 10 Troubleshooting Nexus Route-Maps

### Conditional Matching

- Access Control Lists
- ACLs and ACL Manager Component
- Interior Gateway Protocol (IGP) Network Selection
- BGP Network Selection
- Prefix Matching and Prefix-Lists
- Prefix Matching
- Prefix Lists

### Route-Maps

- Conditional Matching
- Multiple Conditional Match Conditions

# Table of Contents

Complex Matching

Optional Actions

Incomplete Configuration of Routing Policies

Diagnosing Route Policy Manager

Policy-Based Routing

Summary

References

## Chapter 11 Troubleshooting BGP

BGP Fundamentals

Address Families

Path Attributes

Loop Prevention

BGP Sessions

BGP Identifier

BGP Messages

OPEN

UPDATE

NOTIFICATION

KEEPALIVE

BGP Neighbor States

Idle

Connect

Active

OpenSent

OpenConfirm

Established

BGP Configuration and Verification

Troubleshooting BGP Peering Issues

Troubleshooting BGP Peering Down Issues

Verifying Configuration

Verifying Reachability and Packet Loss

Verifying ACLs and Firewalls in the Path

# Table of Contents

Verifying TCP Sessions

OPEN Message Errors

BGP Debugs

Demystifying BGP Notifications

Troubleshooting IPv6 Peers

BGP Peer Flapping Issues

Bad BGP Update

Hold Timer Expired

BGP Keepalive Generation

MTU Mismatch Issues

## BGP Route Processing and Route Propagation

BGP Route Advertisement

Network Statement

Redistribution

Route Aggregation

Default-Information Originate

BGP Best Path Calculation

BGP Multipath

EBGP and IBGP Multipath

BGP Update Generation Process

BGP Convergence

## Scaling BGP

Tuning BGP Memory

Prefixes

Paths

Attributes

Scaling BGP Configuration

Soft Reconfiguration Inbound Versus Route Refresh

Scaling BGP with Route-Reflectors

Loop Prevention in Route Reflectors

Maximum Prefixes

BGP Max AS

## BGP Route Filtering and Route Policies

# Table of Contents

Prefix-List-Based Filtering

Filter-Lists

## BGP Route-Maps

Regular Expressions (RegEx)

\_ Underscore

^ Caret

## Part IV: Troubleshooting High Availability

### Chapter 12 High Availability

Bidirectional Forwarding Detection

Asynchronous Mode

Asynchronous Mode with Echo Function

Configuring and Verifying BFD Sessions

Nexus High Availability

Stateful Switchover

ISSU

Graceful Insertion and Removal

# Table of Contents

Custom Maintenance Profile

Summary

References

## Part V: Multicast Network Traffic

### Chapter 13 Troubleshooting Multicast

#### Multicast Fundamentals

Multicast Terminology

Layer 2 Multicast Addresses

Layer 3 Multicast Addresses

#### NX-OS Multicast Architecture

Replication

Protecting the Central Processing Unit

NX-OS Multicast Implementation

Static Joins

Clearing an MROUTE Entry

Multicast Boundary and Filtering

Event-Histories and Show Techs

#### IGMP

IGMPv2

IGMPv3

IGMP Snooping

IGMP Verification

#### PIM Multicast

PIM Protocol State and Trees

PIM Message Types

PIM Hello Message

PIM Register Message

PIM Register-Stop Message

PIM Join-Prune Message

PIM Bootstrap Message

PIM Assert Message

PIM Candidate RP Advertisement Message

# Table of Contents

PIM DF Election Message  
PIM Interface and Neighbor Verification  
PIM Any Source Multicast  
PIM ASM Configuration  
PIM ASM Verification  
PIM ASM Event-History and MROUTE State Verification  
PIM ASM Platform Verification  
PIM Bidirectional  
BiDIR Configuration  
BiDIR Verification  
PIM RP Configuration  
Static RP Configuration  
Auto-RP Configuration and Verification  
BSR Configuration and Verification  
Anycast-RP Configuration and Verification  
Anycast RP with MSDP  
PIM Anycast RP  
PIM Source Specific Multicast  
SSM Configuration  
SSM Verification

## Multicast and Virtual Port-Channel

vPC-Connected Source  
vPC-Connected Receiver  
vPC Considerations for Multicast Traffic  
Duplicate Multicast Packets  
Reserved VLAN

## Ethanalalyzer Examples

Summary

References

## Part VI: Troubleshooting Nexus Tunneling

### Chapter 14 Troubleshooting Overlay Transport Virtualization (OTV)

OTV Fundamentals

# **Table of Contents**

Flood Control and Broadcast Optimization

Supported OTV Platforms

OTV Terminology

Deploying OTV

OTV Deployment Models

OTV Site VLAN

OTV Configuration

## **Understanding and Verifying the OTV Control Plane**

OTV Multicast Mode

OTV IS-IS Adjacency Verification

OTV IS-IS Topology Table

OTV IS-IS Authentication

Adjacency Server Mode

OTV Control Plane Policing (CoPP)

## **Understanding and Verifying the OTV Data Plane**

OTV ARP Resolution and ARP-ND-Cache

Broadcasts

Unknown Unicast Frames

OTV Unicast Traffic with a Multicast Enabled Transport

OTV Multicast Traffic with a Multicast Enabled Transport

OTV Multicast Traffic with a Unicast Transport (Adjacency Server Mode)

## **Advanced OTV Features**

First Hop Routing Protocol Localization

Multihoming

Ingress Routing Optimization

VLAN Translation

OTV Tunnel Depolarization

OTV Fast Failure Detection

Summary

References

## **Part VII: Network Programmability**

### **Chapter 15 Programmability and Automation**

# **Table of Contents**

Introduction to Automation and Programmability

Introduction to Open NX-OS

Shells and Scripting

Bash Shell

Guest Shell

Python

NX-SDK

NX-API
