Table of Contents

Introduction

1 The Network Management World Must Change: Why Should You Care?

Introduction

The Industry Has Changed: What Are the Trends?

Reduced Deployment Time

CLI Is No Longer the Norm (If a Feature Cannot Be Automated, It Does Not Exist)

Hardware Commoditization and Disaggregation

The DevOps Time

Software-Defined Networking

Network Function Virtualization

Elastic Cloud: Pay As You Grow

Data ModelDriven Management

# **Table of Contents**

(Data ModelDriven) Telemetry

Intent-Based Networking

Software Is Eating the World

## **Existing Network Management Practices and Related Limitations**

CLI: Is This an API?

SNMP: For Monitoring But Not for Configuration

NetFlow and IPFIX: Mainly for Flow Records

Syslog: No Structured Data

## **Data Modeling Is Key for Automation**

The Differences Between Information Models and Data Models

The Challenges of Managing Networks with Different Data Models

## **Interview with the Experts**

Q&A with Victor Kuarsing

Q&A with Russ White

## **Summary**

## **References in This Chapter**

## **Endnotes**

## **2 Data ModelDriven Management**

The Beginning: A New Set of Requirements

Network Management Is Dead, Long Live Network Management

YANG: The Data Modeling Language

The Key to Automation? Data Models

YANG and the Operators Requirements

Properties of Good Data Models

The Different Types of YANG Modules

Mapping YANG Objects from MIB Modules

The Management Architecture

Data ModelDriven Management Components

# **Table of Contents**

## The Encoding (Protocol Binding and Serialization)

- XML

- JSON

- Google Protobufs

- CBOR

## The Server Architecture: Datastore

## The Protocols

- NETCONF

- RESTCONF

- gNMI (gRPC)

- CoMI

## The Programming Language

## Telemetry

## The Bigger Picture: Using NETCONF to Manage a Network

## Interview with the Experts

- Q&A with Jürgen Schönwälder

## Summary

## References in This Chapter

## Endnotes

## 3 YANG Explained

### Introduction

### Describe Your World of Data

- Describe Your Data with Precision

- Separate Your Data into Categories

### Describing Possible Events

- Actions and RPCs

- Notifications

### Separating Configuration from Operational Data

# Table of Contents

## Constraints Keep Things Meaningful

- Mandatory and Default Data

- Conditional Content

- Properly Following Pointers

- Schema Nodes Dont Count

## Augmenting, Extending, and Possibly Deviating

- Extending YANG

- Deviations

## Network Management Datastore Architecture (NMDA)

## Interview with the Expert

- Q&A with Martin Björklund

## Summary

## References in This Chapter

# 4 NETCONF, RESTCONF, and gNMI Explained

## Introduction

## NETCONF

- Fundamentals

- XML Tags, Attributes, and Namespaces

- RPC Mechanism

- Message Framing

- Message Overview

- Hello Message

- Get-Config Message

- Edit-Config Message

- Get Message

- RPCs and Actions

- Notifications

- More NETCONF Operations

- The NMDA Operations get-data and edit-data

# **Table of Contents**

## **RESTCONF**

- REST Principles

- RESTCONF Versus NETCONF

- Finding the RESTCONF Server URL

- Reading and Navigating the RESTCONF Resources

- Creating and Updating Configuration Using RESTCONF

- Actions

- Notifications

## **OpenConfig and gNMI**

- gRPC

- gNMI CapabilityRequest

- gNMI GetRequest

- gNMI SetRequest

- gNMI SubscribeRequest and Telemetry

- YANG RPC, Action and Notification

## **Interview with the Expert**

- Q&A with Kent Watsen

## **Summary**

## **References in This Chapter**

## **5 Telemetry Explained**

- Introduction

- Data ModelDriven Telemetry

- Moving Away from SNMP to Telemetry

- Telemetry Use Cases

- Telemetry Components

- Architecture

- Transport Discussion: Monitoring Versus Events

- Subscription Type: On-Change Versus Periodic

# **Table of Contents**

Dial-In and Dial-Out Modes

## **Telemetry Standard Mechanisms**

NETCONF Event Notifications

IETF YANG Subscriptions

IETF YANG Push Versus OpenConfig: Some History

OpenConfig Streaming Telemetry

## **Interview with the Experts**

Q&A with Alex Clemm

## **Summary**

## **References in This Chapter**

## **Endnotes**

## **6 YANG Data Modeling Developments in the Industry**

Introduction

The Beginning: The IETF

Embracing YANG Throughout the Industry

The OpenConfig YANG Model

Industry Coordination Is Required

Interoperability Testing

Implementing More Than One YANG Model for a Specific Functionality

Interview with the Expert

Q&A with Carl Moberg

## **Summary**

## **References in This Chapter**

## **Endnotes**

## **7 Automation Is as Good as the Data Models, Their Related Metadata, and the Tools: For the Network Architect and Operator**

Introduction

# **Table of Contents**

Getting to Know the Structure of a YANG Module

Finding the Right Modules Using the YANG Catalog

- YANG Search

- The Module Tree

- Module [Metadata] Details

- Moving from Nodes to RPCs and Scripts with YANG Suite

Interacting with Devices

- NETCONF Tools

- RESTCONF Tools

- Telemetry Tools

- Commercial Products

Interview with the Experts

- Q&A with Einar Nilsen-Nygaard

Summary

Endnotes

## **8 Automation Is as Good as the Data Models, Their Related Metadata, and the Tools: For the Module Author**

Introduction

Designing Modules

- Learning from Others

- Compiling and Validating Modules

- Testing Modules

- Sharing the Module Metadata

Understanding Your Modules Impact

Interview with the Expert

- Q&A with William Lupton

Summary

Endnotes

# **Table of Contents**

## **9 Automation Is as Good as the Data Models, Their Related Metadata, and the Tools: For the Application Developer**

Introduction

Working with YANG Modules

Integrating Metadata from YANG Catalog

Embedding Pyang

Pyang Plug-Ins

YANG Parsing with Libyang

Interacting with the Network

NETCONF with Ncclient

NETCONF Clients and Servers with Libnetconf2

Interacting with RESTCONF Servers

Making YANG Language Native

YDK

Pyangbind

Interview with the Expert

Q&A with Radek Krejčí

Summary

Endnotes

## **10 Using NETCONF and YANG**

Introduction

So the Story Goes

Top-Down Service Model

Bottom-Up Device Templates

Service Logic Connecting the Dots

Setting Up NETCONF on a Device

Discovering Whats on a Device

# Table of Contents

Managing Services

Manager Synchronization with Devices

Network-Wide Transactions

Interview with the Experts

Q&A with Kristian Larsson

Summary

## 11 YANG Model Design

Introduction

Modeling Strategy

Getting Started

You, the Four-Star General

YANG Modeling Tips

Naming a Module

Publishing a Module

Choosing YANG Identifiers

Accepting a Blank Configuration

Using Leafrefs

Minding That XPath Feature

Enumerating and More

Choosing Keys

Types Empty and Boolean

Reusing Groupings

Deviating from a Standard YANG Module

Transient Configuration and Other Dependencies

Augmenting YANG Models

Types Anyxml and Anydata

Common YANG Mistakes

Unclear Optional Leafs

# **Table of Contents**

- Missing Ranges
- Overusing Strings
- Bad String Patterns
- Blank Configuration Made Invalid
- Misunderstanding When a Constraint Applies
- Missing the Simple Constraints
- Getting the Path Wrong
- Disconnected Multikey Leafrefs
- Mixing Up For One, For Any, and For All
- Performance of XPath Expressions

## **Backward Compatibility**

- The Rules Versus Staying Relevant
- Tooling

## **Interview with the Experts**

- Q&A with Andy Bierman

## **Summary**

## **References in This Chapter**

## **Index**
