CompTIA® Network+ N10-009 Exam Cram

Companion Website and Pearson Test Prep Access Code

Access interactive study tools on this book's companion website, including practice test software, Key Term flash card application, a Cram Sheet, and more!

To access the companion website, simply follow these steps:

1. Go to www.pearsonITcertification.com/register.
2. Enter the **print book ISBN**: 9780135340837.
3. Answer the security question to validate your purchase.
4. Go to your account page.
5. Click on the **Registered Products** tab.
6. Under the book listing, click on the **Access Bonus Content** link.

When you register your book, your Pearson Test Prep practice test access code will automatically be populated with the book listing under the Registered Products tab. You will need this code to access the practice test that comes with this book. You can redeem the code at **PearsonTestPrep.com**. Simply choose Pearson IT Certification as your product group and log into the site with the same credentials you used to register your book. Click the **Activate New Product** button and enter the access code. More detailed instructions on how to redeem your access code for both the online and desktop versions can be found on the companion website.

If you have any issues accessing the companion website or obtaining your Pearson Test Prep practice test access code, you can contact our support team by going to pearsonitp.echelp.org.

Introduction

CHAPTER 1 Networking Models, Ports, Protocols,
and Services

The OSI Networking Model

The OSI Seven-Layer Model

Comparing OSI to the Four-Layer TCP/IP Model

Identifying the OSI Layers at Which Various Network Components
Operate

Data Encapsulation/Decapsulation and OSI

Ports, Protocols, Services, and Traffic Types

Connection-Oriented Protocols Versus Connectionless Protocols

Internet Protocol

Transmission Control Protocol

User Datagram Protocol

Internet Control Message Protocol

IPsec

Generic Routing Encapsulation

Table of Contents

File Transfer Protocol (FTP)

Secure File Transfer Protocol (SFTP)

Secure Shell (SSH)

Telnet

Simple Mail Transfer Protocol (SMTP)

Domain Name System (DNS)

Dynamic Host Configuration Protocol (DHCP)

Trivial File Transfer Protocol (TFTP)

Hypertext Transfer Protocol (HTTP)

Network Time Protocol (NTP)

Simple Network Management Protocol (SNMP)

Lightweight Directory Access Protocol (LDAP)

Hypertext Transfer Protocol Secure (HTTPS)

Server Message Block (SMB)

Syslog

Simple Mail Transfer Protocol Secure (SMTPS)

Lightweight Directory Access Protocol over SSL (LDAPS)

Structured Query Language (SQL) Server

Remote Desktop Protocol (RDP)

Session Initiation Protocol (SIP)

Understanding Port Functions

Traffic Types

Whats Next?

CHAPTER 2 Network Topologies, Architectures, and Types

Network Topologies

Star/Hub and Spoke

Mesh Topology

Hybrid Topology

Table of Contents

Point to Point

Spine and Leaf

Three-Tier Hierarchical Model

Collapsed Core

Traffic Flows

Older Topologies: Bus and Ring

Whats Next?

CHAPTER 3 Network Addressing, Routing, and Switching

IPv4 Network Addressing

An Overview of IPv4

IP Address Classes

Subnet Mask Assignment

Subnetting

Identifying the Differences Between IPv4 Public and Private Networks

Classless Interdomain Routing

Default Gateways

Assigning IP Addresses

Identifying MAC Addresses

Routing and Switching Technologies

The Default Gateway

Routing Tables

Static Routing

Default Route

Switching Methods

Dynamic Routing

Route Selection

Address Translation

Table of Contents

First Hop Redundancy Protocol (FHRP)

Virtual IP

Subinterfaces

Virtual Local-Area Networks

Interface Configuration and Switch Management

Voice VLAN

Trunking

The Spanning Tree Protocol (STP)

Maximum Transmission Unit (MTU)

Network Services

Dynamic Host Configuration Protocol

The DHCP Process

DHCP and DNS Suffixes

DHCP Relays and IP Helpers

Domain Name Service (DNS)

The DNS Namespace

Types of DNS Entries

DNS Records

DNS in a Practical Implementation

Time Protocols

Whats Next?

CHAPTER 4 Network Implementations

Common Networking Devices

Router

Switch

Firewall

IDS/IPS

Load Balancer

Proxy Server

Table of Contents

Network-Attached Storage (NAS)

Storage-Area Networks

Wireless Access Point

Wireless LAN Controller

Applications/Content Delivery Network

VPNs

Quality of Service

Time To Live (TTL)

Networking Use Cases

Software-Defined Networking

Virtual Extensible Local-Area Network (VXLAN)

Zero Trust Architecture (ZTA)

Secure Access Secure Edge (SASE)/Security Service Edge (SSE)

Infrastructure as Code (IaC)

IPv6 Addressing

Comparing IPv4 and IPv6 Addressing

Whats Next?

CHAPTER 5 Cabling Solutions and Issues

General Media Considerations

Broadband Versus Baseband Transmissions

Simplex, Half-Duplex, and Full-Duplex Modes

Data Transmission Rates

Wired Versus Wireless

Types of Wired Network Media

Types of Media Connectors

Media Couplers/Converters

TIA/EIA 568A and 568B Wiring Standards

Straight-Through Versus Crossover Cables

Rollover and Loopback Cables

Table of Contents

Ethernet Copper and Fiber Standards

Multiplexing Options

Troubleshooting Common Cable Connectivity Issues

Limitations, Considerations, and Issues

Throughput, Speed, and Distance

Cabling Specifications/Limitations

Cabling Considerations

Cabling Issues

Signal Degradation

Interference

Improper Termination

Incorrect Pinout

Bad Ports

Open/Short

LED Status Indicators

Duplexing Issues

TX/RX Reversed

Dirty Optical Cables

Interface Issues

Hardware Issues

Power over Ethernet Issues

Transceiver Issues

Common Tools

Cable Crimpers, Strippers, and Snips/Cutters

Punchdown Tools

Tone Generator

Loopback Adapter

TDR/OTDR

Multimeter

Table of Contents

Cable Tester

Wire Map

Tap

Fusion Splicer

Spectrum Analyzer

Fiber Light Meter

Whats Next?

CHAPTER 6 Wireless Solutions

Understanding Wireless Basics

Wireless Channels and Frequencies

Speed, Distance, and Bandwidth

Channel Bonding

MIMO/MU-MIMO/Directional/Omnidirectional

Network Types

Establishing Communications Between Wireless Devices

Guest Networks

Configuring the Wireless Connection

Autonomous and Lightweight Access Points

Whats Next?

CHAPTER 7 Cloud Computing Concepts and Options

Cloud Concepts

Service Models

Software as a Service

Platform as a Service

Infrastructure as a Service

Deployment Models

Private Cloud

Public Cloud

Table of Contents

Hybrid Cloud

Multitenancy

Elasticity

Scalability

Network Functions Virtualization (NFV)

Cloud Connectivity Options

Virtual Private Cloud (VPC)

Cloud Gateways

Network Security, Groups, and Lists

Whats Next?

CHAPTER 8 Network Operations

Physical Installation Factors

Components of Wiring Distribution

Using Uninterruptible Power Supplies

Beyond the UPS

Environmental Factors

Organizational Processes and Procedures

Wiring and Port Locations

Physical and Logical Network Diagrams

Baseline/Golden Configurations

Policies, Procedures, Configurations, and Regulations

Labeling

Monitoring Network Performance

Common Performance Metrics

SNMP

Network Performance, Load, and Stress Testing

Network Device Logs

Disaster Recovery and High Availability

Table of Contents

Backups

Backup Best Practices

Cold, Warm, Hot, and Cloud Sites

High-Availability Approaches and Recovery Concepts

Active-Active Versus Active-Passive

DR Testing

Network Access and Management Methods

Site-to-Site VPN

Client-to-Site VPN

Connection Methods

Jump Box

In-Band Versus Out-of-Band Management

Whats Next?

CHAPTER 9 Network Security

Common Security Concepts

Encryption

Access Control

Mandatory Access Control

Discretionary Access Control

Rule-Based Access Control

Role-Based Access Control

Defense in Depth

Separation of Duties

Deception Technologies: Honeypots and Honeynets

RADIUS and TACACS+

Kerberos Authentication

Local Authentication

Lightweight Directory Access Protocol

Using Certificates

Table of Contents

- Identity and Access Management (IAM)
- Security Assertion Markup Language (SAML)
- Multifactor Authentication Factors
- Auditing and Regulatory Compliance
- Additional Access Control Methods
- Risk Management
- Penetration Testing
- Security Information and Event Management

Common Networking Attacks

- Denial-of-Service and Distributed Denial-of-Service Attacks
- Other Common Attacks
- Vulnerabilities and Prevention

Applying Network Security

- Disposing of Assets
- Secured Versus Unsecured Protocols
- Key Management
- Hardening Best Practices
- Wireless Security
- Working with Zones

Whats Next?

CHAPTER 10 Network Troubleshooting

Troubleshooting Steps and Procedures

- Identify the Problem
- Establish a Theory of Probable Cause
- Test the Theory to Determine the Cause
- Establish a Plan of Action
- Implement the Solution or Escalate
- Verify Full System Functionality

Table of Contents

Document Findings, Actions, Outcomes, and Lessons Learned
Throughout the Process

Troubleshooting Common Networking Issues

Common Considerations
Common Problems to Be Aware Of
Hardware Failure
Network Performance Issues
Wireless Issues
Site Surveys
Factors Affecting Wireless Signals
Troubleshooting AP Coverage

Troubleshooting Tools

Toner
Cable Tester
Taps
Visual Fault Locator
Wi-Fi Analyzer
Protocol Analyzer
Speed Tester
Port Scanner
LLDP and CDP
NetFlow Analyzer
TFTP Server
Terminal Emulator
IP Scanner
Command-Line Tools
The Trace Route Utility (tracert/traceroute)
ping
ARP

Table of Contents

The netstat Command

ipconfig

ifconfig

nslookup

dig

The tcpdump Command

The route Utility

nmap

Basic Networking Device Commands
