Contents at a Glance

Table of Contents

Introduction

Part I: Getting Started

1 Installing Ubuntu and Post-Installation Configuration

Before You Begin the Installation

Researching Your Hardware Specifications

Installation Options

32-Bit Versus 64-Bit Ubuntu

Planning Partition Strategies

The Boot Loader

Installing from DVD or USB Drive

Step-by-Step Installation

Installing

First Update

Shutting Down

Finding Programs and Files

Software Updater

The sudo Command

Configuring Software Repositories

System Settings

Detecting and Configuring a Printer

Table of Contents

Configuring Power Management in Ubuntu

Setting the Time and Date

Configuring Wireless Networks

Troubleshooting Post-Installation Configuration Problems

References

2 Background Information and Resources

What Is Linux?

Why Use Linux?

What Is Ubuntu?

Ubuntu for Business

Ubuntu in Your Home

Getting the Most from Linux and Ubuntu Documentation

Linux

Ubuntu

Part II: Desktop Ubuntu

3 Foundations of the Linux GUI

Foundations and the X Server

Basic X Concepts

Using X

Elements of the xorg.conf File

Starting X

Using a Display Manager

Changing Window Managers

References

4 Ubuntu Desktop Options

Desktop Environment

Using GNOME: A Primer

KDE and Kubuntu

Xfce and Xubuntu

LXDE and Lubuntu

Table of Contents

MATE and Ubuntu MATE

Ubuntu Budgie

Ubuntu Kylin

References

5 On the Internet

Part III: System Administration

9 Managing Software

Ubuntu Software

Using Synaptic for Software Management

Staying Up to Date

Working on the Command Line

Day-to-Day APT Usage

Finding Software

Using apt-get Instead of apt

Compiling Software from Source

Compiling from a Tarball

Compiling from Source from the Ubuntu Repositories

Configuration Management

dotdee

Ubuntu Core

Using the Snappy Package Manager

References

10 Command-Line Beginners Class

What Is the Command Line?

Accessing the Command Line

Text-Based Console Login

Logging Out

Logging In and Out from a Remote Computer

User Accounts

Reading Documentation

Using Man Pages

Using apropos

Using whereis

Understanding the Linux File System Hierarchy

Table of Contents

Essential Commands in /bin and /sbin

Configuration Files in /etc

User Directories: /home

Using the Contents of the /proc Directory to Interact with or Obtain Information from the Kernel

Working with Shared Data in the /usr Directory

Temporary File Storage in the /tmp Directory

Accessing Variable Data Files in the /var Directory

Navigating the Linux File System

Listing the Contents of a Directory with ls

Changing Directories with cd

Finding Your Current Directory with pwd

Working with Permissions

Assigning Permissions

Directory Permissions

Altering File Permissions with chmod

File Permissions with umask

File Permissions with chgrp

Changing File Permissions with chown

Understanding Set User ID, Set Group ID, and Sticky Bit Permissions

Setting Permissions with Access Control Lists

Working with Files

Creating a File with touch

Creating a Directory with mkdir

Deleting a Directory with rmdir

Deleting a File or Directory with rm

Moving or Renaming a File with mv

Copying a File with cp

Displaying the Contents of a File with cat

Displaying the Contents of a File with less

Using Wildcards and Regular Expressions

Working as Root

Understanding and Fixing sudo

Creating Users

Table of Contents

Deleting Users

Shutting Down the System

Rebooting the System

Commonly Used Commands and Programs

References

11 Command-Line Master Class, Part 1

Why Use the Command Line?

Using Basic Commands

Printing the Contents of a File with cat

Changing Directories with cd

Changing File Access Permissions with chmod

Copying Files with cp

Printing Disk Usage with du

Using echo

Finding Files by Searching with find

Searches for a String in Input with grep

Paging Through Output with less

Creating Links Between Files with ln

Finding Files from an Index with locate

Listing Files in the Current Directory with ls

Listing System Information with lsblk, lshw, lsmode, lspci, and neofetch

Reading Manual Pages with man

Making Directories with mkdir

Moving Files with mv

Renaming Files with rename

Deleting Files and Directories with rm

Sorting the Contents of a File with sort

Printing the Last Lines of a File with tail

Printing the Location of a Command with which

Downloading Files with wget

References

12 Command-Line Master Class, Part 2

Table of Contents

Redirecting Output and Input

stdin, stdout, stderr, and Redirection

Comparing Files

- Finding Differences in Files with diff

- Finding Similarities in Files with comm

Limiting Resource Use and Job Control

- Listing Processes with ps

- Listing Jobs with jobs

- Running One or More Tasks in the Background

- Moving Jobs to the Background or Foreground with bg and fg

- Printing Resource Usage with top

- Setting Process Priority with nice

Combining Commands

- Pipes

- Combining Commands with Boolean Operators

- Running Separate Commands in Sequence

- Process Substitution

Executing Jobs in Parallel

Using Environment Variables

Using Common Text Editors

- Working with nano

- Working with vi

- Working with emacs

- Working with sed and awk

Working with Compressed Files

Using Multiple Terminals with byobu

Doing a Polite System Reset Using REISUB

Fixing an Ubuntu System That Will Not Boot

- Checking BIOS

- Checking GRUB

- Reinstalling GRUB

- Using Recovery Mode

Table of Contents

Reinstalling Ubuntu

Tips and Tricks

Running the Previous Command

Running Any Previous Command

Running a Previous Command That Started with Specific Letters

Running the Same Thing You Just Ran with a Different First Word

Viewing Your History and More

Doing Two or More Things

Using Shortcuts

Confining a Script to a Directory

Using Coreutils

Reading the Contents of the Kernel Ring Buffer with dmesg

14 Automating Tasks and Shell Scripting

What Is a Shell?

Scheduling Tasks

- Using at and batch to Schedule Tasks for Later
- Using cron to Run Jobs Repeatedly
- Using rtcwake to Wake Your Computer from Sleep Automatically

Basic Shell Control

- The Shell Command Line
- Shell Pattern-Matching Support
- Redirecting Input and Output
- Piping Data
- Background Processing

Writing and Executing a Shell Script

- Running the New Shell Program
- Storing Shell Scripts for System-wide Access
- Interpreting Shell Scripts Through Specific Shells
- Using Variables in Shell Scripts
- Assigning a Value to a Variable
- Accessing Variable Values
- Positional Parameters
- A Simple Example of a Positional Parameter
- Using Positional Parameters to Access and Retrieve Variables from the Command Line
- Using a Simple Script to Automate Tasks
- Built-in Variables
- Special Characters

Part VI: Bonus Online Chapters

Table of Contents

42 Using Perl

Using Perl with Linux

- Perl Versions

- A Simple Perl Program

Perl Variables and Data Structures

- Perl Variable Types

- Special Variables

Perl Operators

- Comparison Operators

- Compound Operators

- Arithmetic Operators

- Other Operators

- Special String Constants

Conditional Statements: if/else and unless

- if

- unless

Looping

- for

- foreach

- while

- until

- last and next

- do ... while and do ... until

Regular Expressions

Access to the Shell

Modules and CPAN

Code Examples

- Sending Mail

- Purging Logs

- Posting to Usenet

- One-Liners

- Command-Line Processing
