Introduction

Part 1: The world of Java Script

1 Running JavaScript

What is JavaScript?

JavaScript origins

JavaScript and the web browser

Our first brush with JavaScript

Tools

Getting Git

Getting Visual Studio Code

Getting the sample files

Working on files with Visual Studi Code

What you have learned

2 Hypertext Markup Language (HTML)

HTML and the World Wide Web

Fetching web pages

What is HTML?

Display symbols

# Table of Contents

Lay out text in paragraphs

Create headings

Use preformatted text

Add comments to documents

Add images to web pages

The HTML document

Linking HTML documents

## Making active web pages

Using a button

Reading input from a user

Display text output

## Egg timer

Adding sound to the egg timer

Controlling audio playback

## An image display program

## What you have learned

# 3 Cascading Style Sheets (CSS)

## Putting on the style

Splashing some color

Work with fonts

Text alignment

Make a ticking clock

Create a ticking clock

Margins around text

Creating style classes

Formatting parts of a document using `<div>` and `<span>`

## Cascading styles

Color highlighting using selectors

## What you have learned

# Part 2: Coding with JavaScript

## 4 Working with data

# **Table of Contents**

## Computers as data processors

- Programs as data processors
- JavaScript as a data processor
- Process data with expressions

## Data and information

## Variables in programs

- JavaScript identifiers
- Performing calculations
- Whole numbers and real numbers
- Real numbers and floating-point numbers
- Creating random dice

## Working with text

- JavaScript string delimiters
- Escape sequences in strings
- Working with strings and numbers
- Converting strings into numbers
- Make an adding machine

## Making applications

- Calculating a pizza order
- Converting between Fahrenheit and centigrade
- Adding comments

## Global and local variables

- Global variables

## What you have learned

## 5 Making decisions in programs

### Boolean thinking

- Boolean values in JavaScript
- Boolean expressions
- Logical operators

### The if construction

- Adding an else part

### Use decisions to make an application

# Table of Contents

Build the user interface

Add the code

Using the switch construction

What you have learned

## 6 Repeating actions in programs

App development

Adding data attributes to HTML elements

Using an unordered list as a container

The JavaScript for loop

Work through collections using for-of

Building web pages from code

Deleting elements from a document

What you have learned

## 7 Creating functions

What makes a function?

Give information to functions

Arguments and parameters

Multiple parameters in a function

Using references as function arguments

Arrays of arguments

Returning values from function calls

Add error handling to an application

Local variables in JavaScript functions

What you have learned

## 8 Storing data

Collections of data

Ice Cream Sales

Creating an array

Processing data in an array

Build a user interface

Arrays as lookup tables

# Table of Contents

Creating fixed with layouts

What you have learned

## 9 Objects

Make a tiny contacts app

Prototype HTML

Prototype style sheet

Prototype JavaScript

Storing contact details

Finding contacts

Displaying contacts

Saving a contact

Finding a contact

Use an object to store contact details

Use an object in the Tiny Contacts program

Store data in JavaScript local storage

Use JSON to encode object data

Use property accessors

Use a data schema

Build HTML from a schema

Build a data object from a schema

Improving the user interface

Add Super Search to Tiny Contacts

What you have learned

## Part 3: Useful JavaScript

### 10 Advanced JavaScript

Manage errors with exceptions

Catching exceptions

Class design

Fashion Shop application

Object-oriented design

Store data in a class hierarchy

# Table of Contents

Add a method to give an object a behavior

Overriding methods in subclasses

Static class members

Data storage

Build a user interface

Exploring the Fashion Shop application

What you have learned

## 11 Creating applications

Data analysis

Fashion Shop stock list

Fashion Shop data analysis

Work with array methods

Read the weather

Fetch data from a server

Node.js

Create a web server with Node.js

Node package manager

Deploying a Node.js server

What you have learned

## 12 Creating games

Use the HTML Canvas

Canvas coordinates

Computer art

Draw images on a canvas

Animate images

Control gameplay

Window events

Control object position with a keyboard

Use keydown and keyup events

Create game objects

Game sprites

# Table of Contents

The game object

Starting the game

Add a cheese sprite

Add a Cracker sprite

Add lots of crackers

Catch the crackers

Add sound

Adding scores

Add a killer tomato

Create timed sprites

Complete the game

Add a start screen

Start the game running

What you have learned

Index
