Contents at a Glance

Table of Contents

Introduction

- Who this book is for

  - Assumptions about you

- How this book is organized

- About the companion content

- Acknowledgments

- Support and feedback

  - Errata, updates, and book support

  - Stay in touch

Part I: The Excel interface

- Chapter 1 What's new in Microsoft 365 Excel

  - Excel opens faster

  - Unhide multiple worksheets

  - Performance improvements

  - Stock data automatic refresh every five minutes

  - Show changes from last 60 days

  - Browse during Save As

# Table of Contents

Searching while opening workbooks  
Find dialog box shows all options on open  
Smooth scrolling for tall or wide cells  
Arrange All in Windows 11  
Collapsible tasks panes now support pivot tables  
Accessibility tab in ribbon and the navigation pane  
New Lambda helper functions  
LAMBDA functions now support optional arguments  
The ribbon has rounded edges  
Cut-out people  
Image transparency  
Save any object as picture  
Write data using the Action Pen  
New features introduced tomorrow  
Other new features

## Chapter 2 Using the Excel interface

### Using the ribbon

Using flyout menus and galleries  
Rolling through the ribbon tabs  
Revealing more commands using dialog box launchers, task panes, and More commands  
Using collapsing task panes  
Resizing Excel changes the ribbon  
Activating the Developer tab  
Activating contextual ribbon tabs  
Finding lost commands on the ribbon  
Shrinking the ribbon

### Using the Quick Access Toolbar

Adding icons to the QAT  
Removing commands from the QAT  
Customizing the QAT  
Formatting superscripts and subscripts

# Table of Contents

## Using the full-screen File menu

- Pressing the Esc key to close Backstage view

## Using the new Home screen

- Recovering unsaved workbooks
- Clearing the Recent Workbooks list
- Getting information about the current workbook
- Marking a workbook as final to prevent editing
- Finding hidden content using the Document Inspector
- Avoiding nagging about CSV files
- Adding whitespace around icons using Touch mode

## Using the new Sheet icon to add worksheets

## Navigating through many worksheets using the controls in the lower left

## Using the mini toolbar to format selected text

## Expanding the formula bar

## Zooming in and out on a worksheet

## Using the status bar to add numbers

## Switching between Normal view, Page Break preview, and Page Layout view modes

- Unselecting a cell with Ctrl+click

## Cleaning data with Flash Fill

- Coaching Flash Fill with a second example
- Flash Fill will not automatically fill in numbers
- Using formatting with dates
- Troubleshooting Flash Fill

## Sorting data

- Sorting by color or icon
- Factoring case into a sort
- Reordering columns with a left-to-right sort
- Sorting into a unique sequence by using custom lists
- One-click sorting
- Fixing sort problems

## Chapter 3 Customizing Excel

# Table of Contents

Performing a simple ribbon modification

Adding a new ribbon tab

Sharing customizations with others

Questions about ribbon customization

Using the Excel Options dialog box

- Getting help with a setting

- Recent new options in Excel

- Using AutoRecover options

- Controlling image sizes

- Working with protected view for files originating from the Internet

- Working with Trusted Document settings

Options to consider

Five Excel oddities

## Chapter 4 Keyboard shortcuts

Using keyboard accelerators

- Selecting icons on the ribbon

- Selecting options from a gallery

- Navigating within drop-down menu lists

- Backing up one level through a menu

- Dealing with keyboard accelerator confusion

- Selecting from legacy dialog boxes

Using the shortcut keys

Using my favorite shortcut keys

- Quickly move between worksheets .

- Jumping to the bottom of data with Ctrl+arrow

- Selecting the current region with Ctrl+\*

- Jumping to the next corner of a selection

- Pop open the right-click menu using Shift+F10

- Crossing tasks off your list with Ctrl+5

- Date stamp or time stamp using Ctrl+; or Ctrl+;

- Repeating the last task with F4

- Adding dollar signs to a reference with F4

# Table of Contents

Choosing items from a slicer

Finding the one thing that takes you too much time

## Using Excel 2003 keyboard accelerators

Invoking an Excel 2003 Alt shortcut

Determining which commands work in legacy mode

## Part II: Calculating with Excel

### Chapter 5 Understanding formulas

Getting the most from this chapter

Introduction to formulas

Formulas versus values

Entering your first formula

Building a formula

The relative nature of formulas

Overriding relative behavior: absolute cell references

Using mixed references to combine features of relative and absolute references

Using the F4 key to simplify dollar sign entry

Using F4 after a formula is entered

Using F4 on a rectangular range

Three methods of entering formulas

Enter formulas using the mouse method

Entering formulas using the arrow key method

Entering the same formula in many cells

Copying a formula by using Ctrl+Enter

Copying a formula by dragging the fill handle

Double-click the fill handle to copy a formula

Use the Table tool to copy a formula

Entering one formula and spilling many results

Understanding the #SPILL! error

Using implicit intersection is more complicated than before

Referring to an entire array with the # operator

### Chapter 6 Controlling formulas

# Table of Contents

## Formula operators

- Order of operations

- Unary minus example

- Addition and multiplication example

- Stacking multiple parentheses

## Understanding error messages in formulas

## Using formulas to join text

- Joining text and a number

## Copying versus cutting a formula

## Automatically formatting formula cells

## Specifying implicit intersection using the @ operator

## Using date math

## Troubleshooting formulas

- Seeing all formulas

- Highlighting all formula cells

- Editing a single formula to show direct precedents

- Using formula auditing arrows

- Tracing dependents

- Using the Watch Window

- Evaluate a formula in slow motion

- Evaluating part of a formula

## Chapter 7 Understanding functions

### Working with functions

- The Formulas tab in Excel

- Finding the function you need

- Using Tab to AutoComplete functions

- Using the Insert Function dialog box to find functions

### Getting help with Excel functions

- Using on-grid ToolTips

- Using the Function Arguments dialog box

- Using Excel Help

### Using AutoSum

# Table of Contents

Potential problems with AutoSum

Special tricks with AutoSum

Using AutoAverage or AutoCount

Function reference chapters

## Chapter 8 Using everyday functions: math, date and time, and text functions

### Examples of math functions

Using SUM to add numbers

Using AGGREGATE to ignore error cells or filtered rows

Rounding numbers

Using SUBTOTAL instead of SUM with multiple levels of totals

Totaling visible cells using SUBTOTAL

Using RAND, RANDARRAY, and RANDBETWEEN to generate random numbers and data

Using =ROMAN to finish movie credits and =ARABIC to convert back to digits.

Using ABS to figure out the magnitude of error

Using GCD and LCM to perform seventh-grade math

Using MOD to find the remainder portion of a division problem

Using SQRT and POWER to calculate square roots and exponents

Using SUMIFS, AVERAGEIFS, COUNTIFS, MAXIFS, and MINIFS to conditionally calculate

Dates and times in Excel

Understanding Excel date and time formats

### Examples of date and time functions

Using NOW and TODAY to calculate the current date and time or current date

Using YEAR, MONTH, DAY, HOUR, MINUTE, and SECOND to break a date/time apart

Using DATE to calculate a date from year, month, and day

Using TIME to calculate a time

Using DATEVALUE to convert text dates to real dates

Using TIMEVALUE to convert text times to real times

Using WEEKDAY to group dates by day of the week

Using WEEKNUM or ISOWEEKNUM to group dates into weeks

Calculating elapsed time

Using EOMONTH to calculate the end of the month

Using WORKDAY or NETWORKDAYS or their international equivalents to calculate workdays

Using international versions of WORKDAY or NETWORKDAYS

# Table of Contents

## Examples of text functions

- Joining text with TEXTJOIN
- Using LOWER, UPPER, or PROPER to convert text case
- Using TRIM to remove leading and trailing spaces
- Using the CHAR or UNICHAR function to generate any character
- Using the CODE or UNICODE function to learn the character number for any character
- Using LEFT, MID, or RIGHT to split text
- Using LEN to find the number of characters in a text cell
- Using SEARCH or FIND to locate characters in a particular cell
- Using SUBSTITUTE to replace characters
- Using REPT to repeat text multiple times
- Using EXACT to test case
- Using TEXT to format a number as text
- Using the T and VALUE functions
- Introducing TEXTSPLIT and other text manipulation functions

## Chapter 9 Using powerful functions: logical, lookup, and database functions

### Examples of logical functions

- Using the IF function to make a decision
- Using the AND function to check for two or more conditions
- Using OR to check whether one or more conditions are met
- Using the NOT function to simplify the use of AND and OR
- Using the IFERROR or IFNA function to simplify error checking

### Examples of information functions

- Using the ISFORMULA function with conditional formatting to mark formula cells
- Using IS functions to test for types of values
- Using the N function to add a comment to a formula
- Using the NA function to force charts to not plot missing data
- Using the CELL function to return the worksheet name

### Examples of lookup and reference functions

- Using the CHOOSE function for simple lookups
- Moving from VLOOKUP to XLOOKUP
- Using FORMULATEXT to document a worksheet
- Using numbers with OFFSET to describe a range

# **Table of Contents**

Using INDIRECT to build and evaluate cell references on the fly

Using the HYPERLINK function to add hyperlinks quickly

Using the TRANSPOSE function to formulaically turn data

Using GETPIVOTDATA to retrieve one cell from a pivot table

## **Examples of database functions**

Using DSUM to conditionally sum records from a database

Using the DGET function

## **Chapter 10 Using names, LET, LAMBDA, and Data Types in Excel**

### **Using names in Excel**

Using the Name Box for quick navigation

Avoiding problems by using worksheet-level scope

Using named ranges to simplify formulas

Retroactively applying names to formulas

Adding many names at once from existing labels and headings

Using a name to avoid an absolute reference

### **Storing intermediate formula results using LET**

### **Storing logic in LAMBDA functions**

Creating a simple LAMBDA function for the hypotenuse of a right triangle

Sharing LAMBDA functions with other workbooks

### **Using LAMBDA helper functions**

Performing calculations for each row or column

Performing calculations for each item in an array

Performing calculations for each item in an array and returning a single value

Performing calculations for each item in an array and returning each intermediate value

Making an array using MAKEARRAY

Testing for optional arguments using ISOMITTED

### **Using Data Types in Excel**

Dealing with Data Type formulas that return an array

Drilling down through the data card to find an array

Using stock or currency Data Types

Retrieving historical stock prices using STOCKHISTORY

## **Chapter 11 Connecting worksheets and workbooks**

# **Table of Contents**

Connecting two worksheets

Excel in practice: seeing two worksheets of the same workbook side by side

Creating links between worksheets

- Creating links using the Paste Options menu

- Creating links using the right-drag menu

- Building a link by using the mouse

- Links to external workbooks default to absolute references

- Building a formula by typing

Creating links to unsaved workbooks

Using the Links tab on the Trust Center

Opening workbooks with links to closed workbooks

Dealing with missing linked workbooks

Updating links when a workbook is renamed or moved

- Preventing the Update Links dialog box from appearing

## **Chapter 12 Dynamic array formulas and names in Excel**

Using dynamic array functions to return many results

- Sorting with a formula

- Filtering with a formula

- Using FILTER to select a subset of columns

- Extracting unique values with a formula

- Generating a sequence of numbers

- Generating an array of random numbers with a formula

- Refer to the entire array

- Learning about new functions and features

Using power formula techniques

- Using 3D formulas to spear through many worksheets

- Referring to the previous worksheet

## **Part III: Data analysis with Excel**

### **Chapter 13 Transforming data with Power Query**

Using Power Query

- Establishing a workflow

# Table of Contents

Loading data using Power Query

Loading data from a single Excel workbook

Transforming data in Power Query

Unpivoting data in Power Query

Adding columns in Power Query

Reviewing the query

Loading and refreshing the data

Splitting each delimiter to a new row

Appending one worksheet from every workbook in a folder

Appending worksheets from one workbook

Creating a custom data type in Excel

## Chapter 14 Summarizing data using subtotals or filter

Adding automatic subtotals

Working with the subtotals

Showing a one-page summary with only the subtotals

Sorting the collapsed subtotal view with the largest customers at top

Copying only the subtotal rows

Formatting the subtotal rows

Removing subtotals

Subtotaling multiple fields

Subtotaling daily dates by month

Filtering records

Using a filter

Selecting one or multiple items from the filter drop-down

Identifying which columns have filters applied

Combining filters

Clearing filters

Refreshing filters

Resizing the filter drop-down

Filtering by selection-hard way

Filtering by selection-easy way

Filtering by color or icon

# Table of Contents

Handling date filters

Using special filters for dates, text, and numbers

Totaling filtered results

Formatting and copying filtered results

Using the Advanced Filter command

Excel in practice: using formulas for Advanced Filter criteria

Advanced Filter criteria

Replacing Advanced Filter with a dynamic array formula

Using Remove Duplicates to find unique values

Combining duplicates and adding values

## Chapter 15 Using pivot tables to analyze data

Creating your first pivot table

Using artificial intelligence for inspiration with pivot tables

Starting with a blank pivot table

Adding fields to your pivot table using the field list

Changing the pivot table report by using the field list

Dealing with the compact layout

Rearranging a pivot table

Finishing touches: numeric formatting and removing blanks

Three things you must know when using pivot tables

Your pivot table is in manual calculation mode until you click Refresh

If you click outside the pivot table, all the pivot table tools disappear

You cannot change, move a part of, or insert cells in a pivot table

Calculating and roll-ups with pivot tables

Grouping daily dates to months, quarters, and years

Adding calculations outside the pivot table

Changing the calculation of a field

Showing percentage of total using Show Value As settings

Showing running totals and rank

Using a formula to add a field to a pivot table

Formatting a pivot table

Setting defaults for future pivot tables

# **Table of Contents**

Finding more information on pivot tables

## **Chapter 16 Using slicers and filtering a pivot table**

### **Filtering using the row label filter**

- Clearing a filter

- Filtering using the check boxes

- Filtering using the Label Filters fly-out

- Filtering using the date filters

- Filtering to the top 10

### **Filtering using slicers**

- Adding slicers

- Arranging the slicers

- Using the slicers in Excel

### **Filtering dates**

### **Filtering oddities**

- Autofiltering a pivot table

- Replicating a pivot table for every customer

### **Sorting a pivot table**

## **Chapter 17 Mashing up data with Power Pivot**

### **Joining multiple tables using the Data Model**

- Preparing data for use in the Data Model

- Creating a relationship between two tables in Excel

- Creating a relationship using Diagram view

- Building a pivot table from the Data Model

### **Unlocking hidden features with the Data Model**

- Counting distinct in a pivot table

- Including filtered items in totals

- Creating Median in a pivot table using DAX Measures

- Time intelligence using DAX

- Converting your pivot table to formulas for use on a dashboard

### **Overcoming limitations of the Data Model**

- Enjoying other benefits of Power Pivot

- Learning more

# **Table of Contents**

## **Chapter 18 Using What-If, Scenario Manager, Goal Seek, and Solver**

### **Using What-If**

Creating a two-variable What-If table

Modeling a random scenario using a data table

### **Using Scenario Manager**

Creating a Scenario Summary report

Adding multiple scenarios

### **Using Goal Seek**

### **Using Solver**

Installing Solver

Solving a model using Solver

## **Chapter 19 Automating repetitive functions using VBA macros**

### **Checking security settings before using macros**

### **Recording a macro**

### **Case study: macro for formatting for a mail merge**

How not to record a macro: the default state of the macro recorder

Relative references in macro recording

Starting the macro recorder

Running a macro

### **Everyday-use macro example: formatting an invoice register**

Using the Ctrl+Down-Arrow key to handle a variable number of rows

Making sure you find the last record

Recording the macro in a blank workbook

Editing a macro

### **Understanding VBA code-an analogy**

Comparing object.method to nouns and verbs

Comparing collections to plural nouns

Comparing parameters to adverbs

Accessing VBA help

Comparing adjectives to properties

Using the analogy while examining recorded code

### **Using simple variables and object variables**

# Table of Contents

Using R1C1-style formulas

Entering spillable formulas in macros

Fixing Autosum errors in macros

Customizing the everyday-use macro example: GetOpenFileName and  
GetSaveAsFileName

From-scratch macro example: loops, flow control, and referring to ranges

Finding the last row with data

Looping through all rows

Referring to ranges

Combining a loop with FinalRow

Making decisions by using flow control

Putting together the from-scratch example: testing each record in a loop

A special case: deleting some records

Combination macro example: creating a report for each customer

Using the Advanced Filter for unique records

Using AutoFilter

Selecting Visible Cells Only

Combination macro example: putting it all together

## Chapter 20 More tips and tricks for Excel

Watching the results of a distant cell

Calculating a formula in slow motion

Inserting a symbol in a cell

Editing an equation

Protecting a worksheet

Repeat the last command with F4

Bring the active cell back into view with Ctrl+Backspace

Separating text based on a delimiter

Auditing worksheets using Inquire

Inserting and exploring 3D models

Using the inking tools and the Action Pen

Seeing Workbooks Statistics and Smart Lookup

# Table of Contents

## Part IV: Excel visuals

### Chapter 21 Formatting worksheets

Why format worksheets?

Using traditional formatting

- Changing numeric formats by using the Home tab

- Changing numeric formats by using built-in formats in the Format Cells dialog box

- Using numeric formatting with thousands separators

- Displaying currency

- Displaying dates and times

- Displaying fractions

- Displaying ZIP Codes, telephone numbers, and social security numbers

- Changing numeric formats using custom formats

- Using the four zones of a custom number format

- Controlling text and spacing in a custom number format

- Controlling decimal places in a custom number format

- Using conditions and color in a custom number format

- Using dates and times in a custom number format

- Displaying scientific notation in custom number formats

- Aligning cells

- Changing font size

- Changing font typeface

- Applying bold, italic, and underline

- Using borders

- Coloring cells

- Adjusting column widths and row heights

- Using merge and center

- Rotating text

Formatting with styles

Understanding themes

- Choosing a new theme

- Creating a new theme

- Reusing another themes effects

# Table of Contents

Saving a custom theme

Using a theme on a new document

Sharing a theme with others

## Other formatting techniques

Formatting individual characters

Changing the default font

Wrapping text in a cell

Justifying text in a range

Adding cell notes

## Copying formats

Pasting formats

Pasting conditional formats

Using the Format Painter

Copying formats to a new worksheet

## Chapter 22 Using data visualizations and conditional formatting

### Using data bars to create in-cell bar charts

Creating data bars

Customizing data bars

Showing data bars for a subset of cells

### Using color scales to highlight extremes

### Using icon sets to segregate data

Setting up an icon set

Moving numbers closer to icons

Mixing icons or hiding icons

### Using the top/bottom rules

### Using the highlight cells rules

Highlighting cells by using greater than and similar rules

Comparing dates by using conditional formatting

Identifying duplicate or unique values by using conditional formatting

Using conditional formatting for text containing a value

### Tweaking rules with advanced formatting

Using a formula for rules

# Table of Contents

- Getting to the formula box
- Working with the formula box
- Finding cells within three days of today
- Finding cells containing data from the past 30 days
- Highlighting data from specific days of the week
- Highlighting an entire row
- Highlighting every other row without using a table

Combining rules

Extending the reach of conditional formats

Special considerations for pivot tables

## Chapter 23 Graphing data using Excel charts

Choosing from recommended charts

- Using the paintbrush icon for styles
- Deleting extraneous data using the funnel
- Changing chart options using the plus icon

Easy combo charts

Creating a frequency distribution with a histogram chart

Showing financial data with a waterfall chart

Mapping geographic data with a filled map chart

Saving time with charting tricks

- Adding new data to a chart by pasting.
- Dealing with small pie slices
- Saving a favorite chart style as a template

## Chapter 24 Using 3D Maps

Examples of 3D Maps

- Adding color information for categories
- Zooming in
- Animating over time
- Going ultra-local

Getting your data into a 3D Map

Techniques when using 3D Maps

# Table of Contents

Tipping, rotating, and zooming the map

Adding a photo to a point

Combining layers

Changing column size or color

Resizing the various panes

Adding a satellite photograph

Showing the whole earth

Understanding the time choices

Controlling map labels

Building a tour and creating a video

Using an alternate map

Preparing the store image

Specifying a custom map

## Chapter 25 Using sparklines

Fitting a chart into the size of a cell with sparklines

Understanding how Excel maps data to sparklines

Creating a group of sparklines

Built-in choices for customizing sparklines

Controlling axis values for sparklines

Setting up Win/Loss sparklines

Showing detail by enlarging the sparkline and adding labels

Other sparkline options

## Chapter 26 Formatting spreadsheets for presentation

Using SmartArt

Elements common in most SmartArt

Inserting SmartArt

Changing existing SmartArt to a new style

Adding images to SmartArt

Special considerations for organizational charts and hierarchical SmartArt

Using shapes to display cell contents

Working with shapes

Using WordArt for interesting titles and headlines

# Table of Contents

Using text boxes to flow long text passages

## Using pictures and clip art

Getting your picture into Excel

Inserting a picture from your computer

Inserting multiple pictures at once

Inserting a picture from stock images

## Adjusting the picture using the ribbon tab

Resizing the picture to fit

Adjusting the brightness and contrast

Adjusting picture transparency so cell values show through

Adding interesting effects using the picture styles gallery

Applying artistic effects

Removing the background

## Inserting screen clippings

## Selecting and arranging pictures

Inserting icons, stickers, illustrations, and cut-out people

Examining 3D models

## Chapter 27 Printing

Printing in one click

Finding print settings

Previewing the printed report

Using the Print Preview on the print panel

Using full-screen Print Preview

Making the report fit on the page

Setting worksheet paper size

Adjusting worksheet orientation

Adjusting worksheet margins

Repeating the headings on each page

Excluding part of your worksheet from the print range

Forcing more data to fit on a page

## Working with page breaks

Manually adding page breaks

# **Table of Contents**

Manual versus automatic page breaks

Using Page Break Preview to make changes

Removing manual page breaks

## **Adding headers or footers to the printed report**

Adding an automatic header

Adding a custom header

Inserting a picture or a watermark in a header

Using different headers and footers in the same document

Scaling headers and footers

## **Printing from the File menu**

Choosing a printer

## **Choosing what to print**

Changing printer properties

Changing some of the Page Setup settings

## **Using Page Layout view**

## **Exploring other page setup options**

Printing gridlines and headings

Centering a small report on a page

Replacing error values when printing

Printing comments

Controlling the first page number

## **Chapter 28 Collaborating in Excel**

The rise of working remotely in 2020

Storing documents in the cloud

Sharing documents with others

Sharing during the initial save

Sharing using the Share button

Sharing by mentioning in a modern comment

Seeing who has access to the workbook

Knowing when someone shares a workbook with you

Editing the same workbook at the same time

Seeing who else is editing using presence

# **Table of Contents**

Etiquette for editing at the same time

Avoiding the dreaded veto

Filtering and sorting with Sheet Views

Using threaded comments, mentions, and assigning tasks

Tracking who did what in the workbook

Seeing who changed what with Show Changes

Catching up

Rolling back using Version History

## **Part V: Appendixes**

### **Appendix A Excel functions**

Financial functions in Excel

Logical functions in Excel

Text functions

Text functions for double-byte languages

Date and time functions

Lookup and reference functions

Math and trig functions

Statistical functions

Engineering functions

Cube functions

Information functions

Web functions

Database functions

Add-in functions

Compatibility functions

Alphabetical cross-reference

### **Appendix B Excel functions with DAX or Power Query equivalents**

Excel functions and DAX equivalents

Excel functions with Power Query M equivalents

### **Appendix C Adding functionality to Excel with add-ins**

# **Table of Contents**

Understanding three types of add-ins and how to activate

Find optimal solutions with Solver

Audit workbooks with Inquire

Get descriptive statistics with the Analysis ToolPak

Find near matches with Fuzzy Lookup

Perform science projects with Data Streamer

Perform Euro conversions with Euro Currency Tools

Generate diagrams from data with Visio Data Visualizer

Perform sentiment analysis using Azure Machine Learning

Generate a chart with people using People Graph

Generate fake data

Test brilliant new functions for Excel with Fast Excel

Index
