Contents at a Glance

Contents

Introduction to Azure compute services

Chapter 1 Azure virtual machines

Overview

What is an Azure VM?

Operating system support

VM series

Azure regions

Compute sizing and pricing

Azure VM creation walkthrough

High-availability considerations

Availability sets

Availability zones

Proximity placement groups

Storage disks for VMs

Managed disks

Unmanaged disks

Disk roles

Table of Contents

Disk SKUs

Networking for VMs

Network interfaces

IP addresses

Network security groups

Cost-optimization options

Reserved instances

Azure Hybrid Benefit

Spot instances

Dedicated hosts

Backups and disaster recovery

Backup

Disaster recovery

Best practices

Chapter 2 Azure virtual machine scale sets

Overview

How Azure VMSS work

Why use a VMSS?

VMSS features

Scale sets versus VMs

VMSS creation walkthrough

Large VMSS

Ensure high availability with VMSS

Overprovisioning

Availability zones

Fault domains

Autoscaling

Vertical scaling

Load balancing

Table of Contents

Maintain Azure VMSS

- Upgrade the scale set model
- Perform automatic OS upgrades
- Update golden OS images
- Deploy the Application Health extension and automated instance repairs
- Use Instance Protection
- Use proximity placement groups
- Check and increase vCPU quotas
- Enable termination notifications
- Azure maintenance best practices

Networking considerations and best practices

VMSS deployment best practices

- Use a custom golden image
- Use the Custom Script Extension for app configuration
- Use Windows PowerShell Desired State Configuration
- Use cloud-init for Linux VMs

OS and data disks for scale sets

- Disk types
- Managed disks
- User-managed storage
- Data disks

Strategies for cost optimization

- Spot instances
- Reserved instances
- Dedicated hosts
- Azure Hybrid Benefit

Best practices

Chapter 3 Azure App Service

Table of Contents

Overview

- App Service plans
- Azure App Service Environments

Planning deployment and operations

- Select an appropriate deployment source
- Build pipelines
- Deployment mechanism
- Best practices

Networking considerations

- Service endpoints and private endpoints
- VNet integration
- Traffic Manager and Azure Front Door
- Hybrid Connections
- Network security groups
- Route tables
- Azure DNS private zones

Backup and restore

Disaster recovery

Cost considerations

Security recommendations

Chapter 4 Azure Virtual Desktop

Overview

Key features

Core concepts

- Use cases
- Architecture
- AVD control plane
- Session connectivity

Table of Contents

Reverse Connect

Design considerations

Service locations

Data storage location

Service limitations

Host pools

Validation pool

App groups

Workspaces

Session hosts

Operating systems supported

Windows 10 Enterprise multi-session

VM sizing

Licensing

Scaling

High availability

Reserved instances

WVD agent

Deploying apps to session hosts

Windows OS servicing

Store user profile data

Data redundancy and high availability

Backups

Disaster recovery

VM redundancy

vNETs

User identities

User profile data

Network shares (optional)

Table of Contents

- Applications

- Best practices

Authentication

- AVD service

- Session-host access

- Use built-in roles to provision access

Network considerations

Security

- Security for the overall WVD environment

- Security for session hosts

Integration with Azure DevTest Labs

Other best practices

Publish apps

Chapter 5 Azure Container Instances

Overview

Key features

Benefits of container services

Deployment considerations

- Container groups

- Container orchestration

- Container registry

- Best practices

Security best practices

Chapter 6 Azure Functions

Overview

- Azure Functions hosting options

- Durable Functions

- Triggers

Table of Contents

Bindings

Deploy function apps

Deployment methods

Deployment technologies

Deployment slots

Event-driven scaling

Scaling management

Best practices

Reliability best practices

Organizing functions

Performance and scalability

Storage best practices

Security best practices

Index
