Introduction to Azure networking services

Chapter 1 Azure virtual networks

- Overview

- Azure virtual networks features

- Design concepts and deployment considerations

  - Address space

  - Subnets

  - vNET peering

  - Routing

  - Network security groups (NSGs)

  - Availability zones support

  - vNET network address translation (NAT)

  - Integrations for enhanced security

  - Service tags

  - Disaster recovery planning

# **Table of Contents**

vNET walkthrough

Best practices

## **Chapter 2 Azure Application Gateway**

Overview

Azure Application Gateway features

Design concepts and deployment considerations

Front-end IP addresses

Back-end pools

Listeners

Request routing rules

HTTP settings

Health probes

Sizing and scaling

TLS policy

Application gateway walkthrough

Best practices

## **Chapter 3 Azure VPN gateway**

Overview

Azure VPN gateway features

Design concepts and deployment considerations

VPN types

Gateway SKUs

Connection types

Gateway subnet

Border Gateway Protocol (BGP)

Local network gateways

VPN gateway redundancy

Deployment models

# **Table of Contents**

Best practices

## **Chapter 4 Azure Load Balancer**

Overview

Azure Load Balancer features

Design concepts and deployment considerations

Front-end IP address

Back-end pool

Health probes

Load-balancing rules

Load-balancing algorithms

Availability zones

Azure Load Balancer walkthrough

Best practices

## **Chapter 5 Azure Firewall**

Overview

Azure Firewall features

Design concepts and deployment considerations

Support for availability zones

Inbound DNAT

Outbound SNAT

Traffic filtering

Groupings

Forced tunneling

Threat intelligence

Azure Firewall Manager

Classic rules versus firewall policies

Firewall rule processing

DNS proxy

# **Table of Contents**

- Active FTP support
- Azure Monitor logging
- Azure Firewall deployment walkthrough

Best practices

## **Chapter 6 Azure DNS**

Overview

- Azure DNS features
- Azure DNS limitations

Design and configuration considerations

- Types of DNS zones
- Linking with Azure virtual networks
- Auto registration
- Alias record sets
- Reverse DNS lookup
- Zone delegation

Best practices

## **Chapter 7 Azure Traffic Manager**

Overview

Traffic Manager features

Design concepts and deployment considerations

- Traffic Manager endpoints
- Nested Traffic Manager profiles
- Traffic routing methods
- Endpoint monitoring
- Traffic Manager walkthrough

Best practices

## **Chapter 8 Azure Front Door**

Overview

# **Table of Contents**

## Key features

## Design concepts and deployment considerations

- Back ends

- Back-end pools

- Health probes

- Load balancing

- Traffic routing

- URL rewrite

- URL redirect

- Wildcard domains

- Rules Engine

- Caching

## Network and security

- Azure DDoS Protection Basic

- Protection against unwanted protocols

- Handling large volumes of traffic

- WAF security features

- Front Door service walkthrough

## Best practices

## Chapter 9 Azure Bastion

### Overview

- Azure Bastion features

- Azure Bastion limitations

### Design concepts and deployment considerations

- Architecture

- SKUs

- High-availability hosts

- Virtual network peering

- Disaster recovery

# **Table of Contents**

Service requirements

Best practices

## **Chapter 10 Azure Private Link**

Overview

Azure Private Link features

Design concepts and deployment considerations

Private endpoints

Azure Private Link service

Best practices

Index
