

BAYESIAN ANALYSIS WITH EXCEL AND R

CONRAD CARLBERG

Bayesian Analysis with Excel and R

Conrad G. Carlberg

Contents at a Glance

Preface	ix
1 Bayesian Analysis and R: An Overview	1
2 Generating Posterior Distributions with the Binomial Distribution.....	15
3 Understanding the Beta Distribution	33
4 Grid Approximation and the Beta Distribution.....	53
5 Grid Approximation with Multiple Parameters	75
6 Regression Using Bayesian Methods.....	97
7 Handling Nominal Variables.....	115
8 MCMC Sampling Methods.....	133
Appendix A Installation Instructions for RStan and the <i>rethinking</i> Package on the Windows Platform	149
Glossary	151
Index.....	161

Contents at a Glance

Contents

Preface

1 Bayesian Analysis and R: An Overview

Bayes Comes Back

About Structuring Priors

Watching the Jargon

Priors, Likelihoods, and Posteriors

The Prior

The Likelihood

Contrasting a Frequentist Analysis with a Bayesian

The Frequentist Approach

The Bayesian Approach

Summary

2 Generating Posterior Distributions with the Binomial Distribution

Understanding the Binomial Distribution

Understanding Some Related Functions

Working with R's Binomial Functions

Table of Contents

Using Rs dbinom Function

Using Rs pbinom Function

Using Rs qbinom Function

Using Rs rbinom Function

Grappling with the Math

Summary

3 Understanding the Beta Distribution

Establishing the Beta Distribution in Excel

Comparing the Beta Distribution with the Binomial Distribution

Decoding Excels Help Documentation for BETA.DIST

Replicating the Analysis in R

Understanding dbeta

Understanding pbeta

Understanding qbeta

About Confidence Intervals

Applying qbeta to Confidence Intervals

Applying BETA.INV to Confidence Intervals

Summary

4 Grid Approximation and the Beta Distribution

More on Grid Approximation

Setting the Prior

Using the Results of the Beta Function

Tracking the Shape and Location of the Distribution

Inventorizing the Necessary Functions

Looking Behind the Curtains

Moving from the Underlying Formulas to the Functions

Comparing Built-in Functions with Underlying Formulas

Understanding Conjugate Priors

Table of Contents

Summary

5 Grid Approximation with Multiple Parameters

Setting the Stage

Global Options

Local Variables

Specifying the Order of Execution

Normal Curves, Mu and Sigma

Visualizing the Arrays

Combining Mu and Sigma

Putting the Data Together

Calculating the Probabilities

Folding in the Prior

Inventorying the Results

Viewing the Results from Different Perspectives

Summary

6 Regression Using Bayesian Methods

Regression à la Bayes

Sample Regression Analysis

Matrix Algebra Methods

Understanding quap

Continuing the Code

A Full Example

Designing the Multiple Regression

Arranging a Bayesian Multiple Regression

Summary

7 Handling Nominal Variables

Using Dummy Coding

Table of Contents

Supplying Text Labels in Place of Codes

Comparing Group Means

Summary

8 MCMC Sampling Methods

Quick Review of Bayesian Sampling

Grid Approximation

Quadratic Approximation

MCMC Gets Up To Speed

A Sample MCMC Analysis

ulam's Output

Validating the Results

Getting Trace Plot Charts

Summary and Concluding Thoughts

Appendix Installation Instructions for RStan and the rethinking
Package on the Windows Platform
