Introduction

- Organization of this book

- Microsoft certifications

- Quick access to online references

- Errata, updates, & book support

- Stay in touch

Chapter 1 Secure Windows Server on-premises and hybrid infrastructure

- Skill 1.1: Secure Windows Server operating system

 - Configure and manage exploit protection

 - Configure and manage Windows Defender Application Control

 - Configure and manage Windows Defender for Endpoint

 - Configure and manage Windows Defender Credential Guard

 - Configure SmartScreen

 - Implement operating system security by using Group Policies

 - Configure Windows Server Auditing

 - Implement and manage Azure AD self-service password reset

Table of Contents

Skill 1.2: Secure a hybrid Active Directory infrastructure

- Configure password policies
- Enable password block lists
- Manage protected users
- Manage account security on a Read-Only Domain Controller (RODC)
- Harden domain controllers
- Configure authentication policies silos
- Restrict access to domain controllers
- Configure account security
- Manage AD built-in administrative groups
- Manage AD delegation
- Implement and manage Microsoft Defender for Identity

Skill 1.3: Identify and remediate Windows Server security issues by using Azure services

- Monitor on-premises servers and Azure IaaS virtual machines (VMs) by using Microsoft Sentinel
- Identify and remediate security issues in on-premises servers and Azure IaaS VMs by using Microsoft Defender for Cloud (Azure Security Center)
- Manage security updates using Windows Server Update Services
- Manage security updates using Azure Automation Update Management
- Onboard Windows Server using Azure Automanage

Skill 1.4: Secure Windows Server networking

- Manage Windows Defender Firewall
- Implement connection security rules
- Implement domain isolation

Skill 1.5: Secure Windows Server storage

- Manage Windows BitLocker Drive Encryption (BitLocker)
- Manage and recover encrypted volumes
- Enable storage encryption by using Azure Disk Encryption

Table of Contents

Manage disk encryption keys for IaaS virtual machines

Chapter summary

Thought experiment

Thought experiment answers

Chapter 2 Implement and manage Windows Server High Availability

Skill 2.1: Implement a Windows Server failover cluster

Implement a failover cluster on-premises, hybrid, or cloud-only

Create a Windows failover cluster

Stretch cluster across datacenter or Azure regions

Configure storage for failover clustering

Modify quorum options

Configure network adapters for failover clustering

Configure cluster workload options

Configure cluster sets

Create an Azure witness

Configure a floating IP address for the cluster

Implement load balancing for the failover cluster

Skill 2.2: Manage failover clustering

Implement Cluster-Aware Updating

Recover a failed cluster node

Upgrade a node to Windows Server 2022

Failover workloads between nodes

Manage failover clusters using Windows Admin Center

Skill 2.3: Implement and manage Storage Spaces Direct

Understand Storage Spaces Direct

Create failover cluster using Storage Spaces Direct

Configure Storage Spaces Direct

Upgrade Storage Spaces Direct node

Table of Contents

Implement networking for Storage Spaces Direct

Chapter summary

Thought experiment

Thought experiment answers

Chapter 3 Implement disaster recovery

Skill 3.1: Manage backup and recovery for Windows Server

Understand Azure Backup

Manage backups in Azure Recovery Services vault

Back up and restore files and folders to Azure Recovery Services vault

Install and manage Azure Backup Server

Back up and recover using Azure Backup Server

Create a backup policy

Configure backup for Azure Virtual Machines using the built-in backup agent

Restore a VM

Skill 3.2: Implement disaster recovery by using Azure Site Recovery

Understand Azure Site Recovery

Configure Site Recovery for on-premises VMs

Configure a recovery plan

Configure Site Recovery for Azure virtual machines

Configure Azure Site Recovery networking

Configure Azure Site Recovery policy

Skill 3.3: Protect virtual machines by using Hyper-V Replica

Understand Hyper-V Replica

Configure Hyper-V hosts for replication

Manage Hyper-V Replica servers

Configure VM replication

Perform a failover

Chapter summary

Thought experiment

Thought experiment answers

Chapter 4 Migrate servers and workloads

Skill 4.1: Migrate on-premises storage to on-premises servers or Azure

Transfer data and shares

Cut over to a new server by using Storage Migration Service

Use Storage Migration Service to migrate to Azure Virtual Machines

Migrate to Azure File Shares

Skill 4.2: Migrate on-premises servers to Azure

Migrate by using Azure Migrate

Deploy and configure Azure Migrate appliance

Migrate VM workloads to Azure IaaS

Migrate physical workloads to Azure IaaS

Skill 4.3: Migrate workloads from previous versions to Windows Server 2022

Understand Windows Server Migration Tools

Migrate Internet Information Services (IIS)

Migrate Hyper-V hosts

Migrate Remote Desktop Services (RDS) host servers

Migrate Dynamic Host Configuration Protocol (DHCP)

Migrate print servers

Monitor Azure Virtual Machines performance by using VM Insights

Skill 4.4: Migrate IIS workloads to Azure

Migrate IIS workloads to Azure Web Apps

Migrate IIS workloads to containers

Skill 4.5: Migrate an AD DS infrastructure to Windows Server 2022

AD DS

Upgrade an existing forest

Migrate AD DS objects, including users, groups and Group Policies, using Active Directory Migration Tool

Table of Contents

Migrate to a new Active Directory forest

Chapter summary

Thought experiment

Thought experiment answers

Chapter 5 Monitor and troubleshoot Windows Server environments

Skill 5.1: Monitor Windows Server by using Windows Server tools and Azure services

Monitor Windows Server by using Performance Monitor

Create and configure data collector sets

Monitor servers using Windows Admin Center

Monitor by using System Insights

Manage event logs

Deploy Azure Monitor and Log Analytics agents

Collect performance counters to Azure

Create alerts

Monitor Azure Virtual Machines by using Azure Diagnostics extension

Skill 5.2: Troubleshoot Windows Server on-premises and hybrid networking

Troubleshoot hybrid network connectivity

Troubleshoot Azure VPN

Troubleshoot on-premises connectivity

Skill 5.3: Troubleshoot Windows Server virtual machines in Azure

Troubleshoot deployment failures

Troubleshoot booting failures

Troubleshoot VM performance issues

Troubleshoot VM extension issues

Troubleshoot disk encryption issues

Troubleshoot storage

Table of Contents

Troubleshoot VM connection issues

Skill 5.4: Troubleshoot Active Directory

Restore objects from AD Recycle Bin

Recover Active Directory database using Directory Services Restore Mode

Troubleshoot Active Directory replication

Recover SYSVOL

Troubleshoot hybrid authentication issues

Troubleshoot on-premises Active Directory

Chapter summary

Thought experiment

Thought experiment answers
