Introduction

- Organization of this book

- Preparing for the exam

- Microsoft certifications

- Quick access to online references

- Errata, updates & book support

- Stay in touch

Chapter 1 Manage identity and access

- Skill 1.1: Manage Azure Active Directory identities

  - Create and manage a managed identity for Azure resources

  - Manage Azure AD groups

  - Manage Azure AD users

  - Manage external identities by using Azure AD

  - Manage administrative units

- Skill 1.2: Manage secure access by using Azure AD

  - Configure Azure AD Privileged Identity Management (PIM)

  - Implement conditional access policies, including multifactor authentication

  - Implement Azure AD Identity Protection

# **Table of Contents**

Implement passwordless authentication

Configure access reviews

## **Skill 1.3: Manage application access**

Integrate single sign-on (SSO) and identity providers for authentication

Create an app registration

Configure app registration permission scopes

Manage app registration permission consent

Manage API permissions to Azure subscriptions and resources

Configure an authentication method for a service principal

## **Skill 1.4: Manage access control**

Configure Azure role permissions for management groups, subscriptions,  
resource groups, and resources

Interpret role and resource permissions

Assign built-in Azure AD roles

Create and assign custom roles, including Azure roles and Azure AD roles

## **Thought experiment**

Identity and access at Tailwind Traders

## **Thought experiment answers**

## **Chapter summary**

# **Chapter 2 Implement platform protection**

## **Skill 2.1: Implement advanced network security**

Overview of Azure network components

Secure the connectivity of hybrid networks

Secure connectivity of virtual networks

Create and configure Azure Firewall

Create and configure Azure Firewall Manager

Create and configure Azure Front Door

Create and configure Web Application Firewall (WAF)

Configure resource firewall

# **Table of Contents**

Implement Azure service endpoints

Azure private endpoints and Private Links

Implement Azure DDoS protection

## **Skill 2.2: Configure advanced security for compute**

Configure Azure endpoint protection for virtual machines (VMs)

Implement and manage security updates for VMs

Configure security for containers services

Manage access to Azure Container Registry

Configure security for serverless compute

Configure security for Azure App Service

Configure encryption at rest

Configure encryption in transit

Thought experiment

Advanced security for compute at Tailwind Traders

Thought experiment answers

Chapter summary

## **Chapter 3 Manage security operations**

### **Skill 3.1: Configure centralized policy management**

Configure a custom security policy

Create a policy initiative

Configure security settings and auditing by using Azure Policy

### **Skill 3.2: Configure and manage threat protection**

Microsoft Defender for servers

Evaluate vulnerability scan from Microsoft Defender for servers

Configure Microsoft Defender for SQL

### **Skill 3.3: Configure and manage security monitoring solutions**

Introduction to Azure Monitor

Create and customize alert rules in Azure Monitor

Configure diagnostic logging and log retention by using Azure Monitor

# **Table of Contents**

- Introduction to Microsoft Sentinels architecture
- Create and customize alerts
- Evaluate alerts and incidents in Microsoft Sentinel

## **Thought experiment**

- Monitoring Security at Tailwind Traders

## **Thought experiment answers**

## **Chapter summary**

## **Chapter 4 Secure data and applications**

### **Skill 4.1: Configure security for storage**

- Configure access control for storage accounts
- Configure storage account access keys
- Configure Azure AD authentication for Azure Storage and Azure Files
- Configure delegated access

### **Skill 4.2: Configure security for databases**

- Enable database authentication by using Azure AD
- Enable database auditing
- Configure dynamic masking on SQL workloads
- Implement database encryption for Azure SQL Database
- Implement network isolation for data solutions, including Azure Synapse Analytics and Azure Cosmos DB
- Configure Microsoft Defender for SQL

### **Skill 4.3: Configure and manage Key Vault**

- Create and configure Key Vault
- Configure access to Key Vault
- Manage certificates, secrets, and keys
- Configure key rotation
- Configure backup and recovery of certificates, secrets, and keys

## **Thought experiment**

- Securing data at Tailwind Traders

# **Table of Contents**

Thought experiment answers
