Contents

1 Introduction to Rust

Introduction

Functional Programming

Expression Oriented

Pattern-Oriented

Features

Safeness

Ownership

Lifetimes

Fearless Concurrency

Zero-Cost Abstraction

Rust Terminology

Tools

A Note About Security

Summary

2 Getting Started

Preliminaries

Rust and Windows

Table of Contents

Installing Rust

Advanced Rustup

Hello, World

Compile and Run

Cargo

Library

Comments

Published Crates

Main Function

Command-Line Arguments

Summary

3 Variables

Terminology

Variables

Primitives

Integer Types

Overflow

Notations

Floating Point Types

Floating Point Constants

Infinity

NaN

Numeric Ranges

Casting

Boolean Types

Char

Table of Contents

Pointers

References

Operators

Summary

4 Strings

Str

String

Length

Extending a String

Capacity

Accessing a String Value

String Characters

Deref Coercion

Formatted String

Helpful Functions

Summary

5 Console

Print

Positional Arguments

Variable Arguments

Named Arguments

Padding, Alignment, and Precision

Base

Developer Facing

Write! Macro

Display Trait

Debug Trait

Table of Contents

Format! Macro

Console Read and Write

Summary

6 Control Flow

The if Expression

The while Expression

 The break and continue Keywords

 The for Expression

The loop Expression

 The loop break Expression

 The Iterator Trait

The loop Label

Summary

7 Collections

Arrays

 Multidimensional Arrays

 Accessing Array Values

 Slices

 Comparing Arrays

 Iteration

 Coercion

Vectors

 Multidimensional

 Access

 Iteration

 Resizing

 Capacity

HashMap

Table of Contents

Creating a HashMap

Accessing the HashMap

Updating an Entry

Iteration

Summary

8 Ownership

Stack and Heap Memory

Shallow versus Deep Copy

Car Analogy

Move Semantics

Borrow

Copy Semantics

Clone Trait

Copy Trait

Clone Trait

Summary

9 Lifetimes

Introduction to Lifetimes

Function Headers and Lifetimes

Lifetime Annotation

Lifetime Elision

Complex Lifetimes

Sharing a Lifetime

Static Lifetimes

Structs and Lifetimes

Methods and Lifetimes

Subtyping Lifetimes

Table of Contents

- Anonymous Lifetimes
- Generics and Lifetimes
- Summary

10 References

- Declaration
- Borrowing
- Dereferencing
- Comparing References
- Reference Notation
- Reference to Reference
- Mutability
- Limits to Multiple Borrowers
- Summary

11 Functions

- Function Definition
- Parameters
- Function Return
- Const Functions
- Nested Functions
- Function Pointers
- Function Aliases
- Summary

12 Error Handling

- Handling Error Handling
- The Result Enum
- The Option Enum

Table of Contents

Panics

- Panic! Macro

- Handling Panics

Unwrapping

- Match Pattern for Result and Option

Map

- Rich Errors

- Custom Errors

- Summary

13 Structures

- Alternate Initialization

- Move Semantics

- Mutability

- Methods

- Self

- Associated Functions

- Impl Blocks

- Operator Overloading

 - Unary Operator Overloading

 - Binary Operator Overloading

- Tuple Struct

 - Unit-Like Struct

- Summary

14 Generics

- Generic Functions

- Bounds

- The where Clause

Table of Contents

Structs

Associated Functions

Enums

Generic Traits

Explicit Specialization

Summary

Summary

15 Patterns

Let Statement

Wildcards

Complex Patterns

Ownership

Irrefutable

Ranges

Multiple Patterns

Control Flow

Structs

Functions

Match Expressions

Match Guards

Summary

16 Closures

Hello, World

Closure Syntax

Closed Over

Closures as Function Arguments

Table of Contents

Closures as Function Return Values

Implementation of Closures

The Fn Trait

The FnMut Trait

The FnOnce Trait

The move Keyword

The Impl Keyword

Matrix Example

Summary

17 Traits

Trait Definition

Default Functions

Marker Trait

Associated Functions

Associated Types

Extension Methods

Fully Qualified Syntax

Supertraits

Static Dispatch

Dynamic Dispatch

Enums and Traits

Summary

18 Threads 1

Synchronous Function Calls

Threads

The Thread Type

Processor Time

Table of Contents

Builder

Communicating Sequential Process

Asynchronous Channel

Synchronous Channel

Rendezvous Channel

The try Methods

Store Example

Summary

19 Threads 2

Mutex

Nonscoped Mutex

Mutex Poisoning

Reader-Writer Lock

Condition Variables

Atomic Operations

Store and Load

Fetch and Modify

Compare and Exchange

Summary

20 Memory

Stacks

Static Values

The Heap

Interior Mutability

RefCell

OnceCell

Summary

Table of Contents

21 Macros

- Tokens

- Declarative Macros

 - Repetition

 - Multiple Macro Matchers

- Procedural Macros

 - Derive Macros

 - Attribute Macros

 - Function-Like Macros

- Summary

22 Interoperability

- Foreign Function Interface

- Basic Example

- Libc Crate

- Structs

- Bindgen

- C Calling Rust Functions

- Cbindgen

- Summary

23 Modules

- Module Items

 - Module Files

 - The path Attribute

- Functions and Modules

- The crate, super, and self Keywords

- Legacy Model

- Summary
