Table of Contents

Chapter 1 Getting Started

1-1 Introduction

Starting a New Drawing

An Alternative Method to Starting a New Drawing

1-2 Tabs and Panels

Accessing Additional Commands Within a Panel

Tooltips for Commands

Accessing Other Help Information

1-3 The Command Line Window

Entering a Diameter Value

1-4 Command Tools

Determining the Command That a Tool Button Represents

1-5 Starting a New Drawing

1-6 Naming a Drawing

Creating a New Drawing

Saving a New Drawing File

1-7 Drawing Units

Specifying or Changing the Drawing Units

Specifying or Changing the Precision of the Units System

Specifying or Changing the Angle Units Value

1-8 Drawing Limits

Aligning the Drawing Limits with a Standard A3 (Metric) Paper Size

1-9 Grid and Snap

Setting the Grid and Snap Values

1-10 Drawing Problem

Specifying the Drawing Units

Table of Contents

Defining the Units Precision

Setting the Sheet Size

Setting Grid and Snap Values

1-11 Save and Save As

Using the Save and Save As Commands

1-12 Open

Using Open

1-13 Close

1-14 Exercise Problems

Chapter 2 Fundamentals of 2D Construction

2-1 Introduction

2-2 LineRandom Points

Randomly Selecting Points

Exiting a Command Sequence

Creating a Closed Area

2-3 Erase

Erasing Individual Lines

Erasing a Group of Lines

2-4 LineSnap Points

Drawing Problem

2-5 LineDynamic Input

Creating Lines Using Dynamic Input

Accessing Dynamic Input Settings

2-6 Construction Line

Using Other Construction Line Commands: Hor, Ver, and Ang

Using Another Construction Line Option: Offset

2-7 Circle

Drawing a CircleRadius

Drawing a CircleDiameter

Drawing a CircleTwo Points

Drawing a CircleThree Points

Drawing a CircleTangent Tangent Radius

Quadrant-Sensitive Applications

2-8 Circle Centerline

Creating Center Marks

Table of Contents

2-9 Polyline

- Drawing a Polyline
- Verifying That a Polyline Is a Single Entity
- Drawing a Polyline Arc
- Other Options with a Polyline Arc
- Drawing Different Line Thicknesses

2-10 Spline

2-11 Ellipse

- Drawing an EllipseAxis Endpoint
- Drawing an EllipseCenter
- Drawing an Elliptical Arc

2-12 Rectangle

- Drawing a Rectangle
- Exploding a Rectangle

2-13 Polygon

- Drawing a PolygonCenter Point
- Drawing a PolygonEdge Distance

2-14 Point

- Changing the Shape of a Point
- Changing the Size of a Point

2-15 Text

- Creating Multiline Text
- The Multiline Text Editor
- Accessing the Multiline Text Editor
- Changing Text Height
- Changing the Text Font
- Justifying Text
- Justifying Text to the Right
- Using the Symbol Options
- Changing Text Color

2-16 Move

- Moving an Object

2-17 Copy

- Copying an Object
- Making Multiple Copies

2-18 Offset

Table of Contents

2-19 Mirror

2-20 Array

Using the Rectangular Array Option

Using the Polar Array Option

Using the Path Array Option

2-21 Rotate

Rotating an Object

2-22 Trim

Using Trim

2-23 Extend

2-24 Break

Using the Break Command

Using the First Point Option

2-25 Chamfer

Creating a Chamfer

2-26 Fillet

Creating a Fillet

2-27 Table

Creating a Table

2-28 Exercise Problems

Chapter 3 Advanced Commands

3-1 Introduction

3-2 Object Snap

Accessing the Object Snap Modes

Enabling Object Snap Modes

Changing the Size of the Osnap Marker

3-3 OsnapEndpoint

Snapping to the Endpoint of an Existing Line

3-4 OsnapMidpoint

Drawing a Circle About the Midpoint of a Line

3-5 OsnapIntersection

Using Osnap Intersection Mode to Define an Ellipse

3-6 OsnapApparent Intersection

Drawing a Circle Centered About an Apparent Intersection

3-7 OsnapCenter

Table of Contents

Drawing a Line to the Center Point of a Circle

3-8 OsnapQuadrant

Drawing a Line to One of a Circles Quadrant Points

3-9 OsnapPerpendicular

Drawing a Line Perpendicular to an Existing Line

3-10 OsnapTangent

Drawing a Line Tangent to a Circle

3-11 OsnapNearest

Drawing a Line from a Point to the Nearest Selected Point on an Existing Line

3-12 Drawing Problem

3-13 Drawing Problem

3-14 Grips

Turning Grips Off

Accessing the Grips Dialog Box

3-15 GripsExtend

Extending the Length of a Line

3-16 GripsMove

Moving an Object Using Grips

3-17 GripsRotate

Rotating an Object Using Grips

3-18 GripsScale

Changing the Scale of an Object

3-19 GripsMirror

Mirroring an Object

3-20 Blocks

Creating a Block

Inserting a Block

Changing the Scale of a Block

Exploding a Block

3-21 Working with Blocks

Inserting Blocks at Different Angles

Inserting Blocks with Different Scale Factors

Using the Blocks Palette to Change the Shape of a Block

Combining Blocks

3-22 Wblock

Table of Contents

- Using Wblock to Create a New Drawing File
- Verifying That Wblock Created a New Drawing

3-23 Layers

- Creating New Layers
- Changing the Color and Linetype of a Layer
- Drawing on Different Layers
- Changing an Objects Layer
- Changing the Scale of a Linetype
- Using the Match Layer Tool
- Turning Layers Off

3-24 Attributes

- Adding an Attribute to a Block
- Creating a New Block That Includes Attributes
- Inserting an Existing Block with Attributes
- Editing an Existing Attribute

3-25 Title Blocks with Attributes

3-26 Edit Polyline

- Creating a Splined Polyline from a Given Polyline

3-27 Edit Spline

- Editing a Spline

3-28 Edit Text

- Changing Existing Text

3-29 Constructing the Bisector of an Angle, Method I

3-30 Constructing the Bisector of an Angle, Method II

3-31 Constructing an Ogee Curve (S-Curve) with Equal Arcs

3-32 Constructing a Parabola

3-33 Constructing a Hyperbola

3-34 Constructing a Spiral

3-35 Constructing a Helix

3-36 Designing by Using Shape Parameters

- Drawing Problem

- Drawing Problem

3-37 Exercise Problems

Chapter 4 Sketching

4-1 Introduction

Table of Contents

- 4-2 Establishing Your Own Style
- 4-3 Graph Paper
- 4-4 Pencils
- 4-5 Lines
- 4-6 Proportions
- 4-7 Curves
- 4-8 Drawing Problem
- 4-9 Isometric Sketches
- 4-10 Drawing Problem
- 4-11 Oblique Sketches
- 4-12 Perspective Sketches
- 4-13 Working in Different Orientations
- 4-14 Exercise Problems

Chapter 5 Orthographic Views

- 5-1 Introduction
- 5-2 Three Views of an Object
- 5-3 Visualization
 - Drawing a Three-Dimensional Box
- 5-4 Hidden Lines
- 5-5 Hidden Line Conventions
- 5-6 Drawing Hidden Lines
 - Adding Hidden Linetypes to a Drawing
 - Creating a Hidden Layer for General Use
 - Changing Layers
- 5-7 Precedence of Lines
- 5-8 Slanted Surfaces
- 5-9 Projection Between Views
- 5-10 Drawing Problem
- 5-11 Compound Lines
- 5-12 Drawing Problem
- 5-13 Oblique Surfaces
- 5-14 Drawing Problem
- 5-15 Rounded Surfaces
- 5-16 Drawing Problem

Table of Contents

5-17 Holes

5-18 Holes in Slanted Surfaces

Drawing an Ellipse Representing a Projected Hole

Drawing Three Views of a Hole in a Slanted Surface

Drawing Three Views of a Hole Through an Oblique Surface

5-19 Cylinders

5-20 Drawing Problem

5-21 Cylinders with Slanted and Rounded Surfaces

5-22 Drawing Problem

5-23 Drawing Conventions and Cylinders

5-24 Irregular Surfaces

5-25 Drawing Problem

5-26 Hole Callouts

Drawing a Countersunk Hole

5-27 Castings

5-28 Drawing Problem

5-29 Thin-Walled Objects

5-30 Drawing Problem

5-31 Intersections

5-32 Drawing Problem

5-33 Drawing Problem

5-34 Drawing Problem

5-35 Designing by Modifying an Existing Part

5-36 Drawing Standards

5-37 Third- and First-Angle Projections

5-38 Exercise Problems

Chapter 6 Sectional Views

6-1 Introduction

6-2 Cutting Plane Lines

Drawing a Cutting Plane Line Method I

Drawing a Cutting Plane Line Method II

6-3 Indicating Solid Cuts

6-4 Hatch

Hatching a Given Area

Table of Contents

Changing Hatch Patterns

Changing the Spacing and Angle of a Hatch Pattern

6-5 Drawing Problem

6-6 Styles of Section Lines

6-7 Sectional View Location

6-8 Holes in Sections

6-9 Gradients

Creating a Gradient

6-10 Offset Sections

6-11 Multiple Sections

6-12 Aligned Sections

6-13 Drawing Conventions in Sections

6-14 Half, Partial, and Broken-Out Sectional Views

6-15 Removed Sectional Views

6-16 Breaks

Drawing an S-Break

6-17 Sectional Views of Castings

6-18 Exercise Problems

Chapter 7 Auxiliary Views

7-1 Introduction

7-2 Projection Between Normal and Auxiliary Views

Rotating the Drawings Axis System

7-3 Drawing Problem

7-4 Transferring Lines Between Views

Measuring the Length of a Line

Using Grips to Move a Line

Rotating and Moving a Line

7-5 Drawing Problem

7-6 Projecting Rounded Surfaces

7-7 Drawing Problem

7-8 Projecting Irregular Surfaces

7-9 Drawing Problem

7-10 Drawing Problem

7-11 Partial Auxiliary Views

Table of Contents

7-12 Sectional Auxiliary Views

7-13 Auxiliary Views of Oblique Surfaces

7-14 Secondary Auxiliary Views

Drawing the First Auxiliary View

Drawing the Secondary Auxiliary View

7-15 Drawing Problem

7-16 Secondary Auxiliary View of an Ellipse

7-17 Exercise Problems

Chapter 8 Dimensioning

8-1 Introduction

8-2 Terminology and Conventions

Some Common Terms

Some Dimensioning Conventions

Some Common Errors to Avoid

8-3 Linear Dimensions

Creating a Linear Dimension

Creating a Vertical Dimension

Creating a Horizontal Dimension by Selecting the Object to Be Dimensioned

Changing the Default Dimension Text Using the Text Option

Changing the Default Dimension Text with the Mtext Option

Editing an Existing Dimension

8-4 Dimension Styles

Changing the Scale of a Drawing

Using the Text Tab

8-5 Units

Preventing a Zero from Appearing to the Left of the Decimal Point

Changing the Number of Decimal Places in a Dimension Value

8-6 Aligned Dimensions

Creating an Aligned Dimension

Using Text Options

8-7 Radius and Diameter Dimensions

Creating a Radius Dimension

Altering the Default Dimension

Removing the Center Mark from a Radius Dimension

Creating a Diameter Dimension

Table of Contents

Creating Center Marks and Lines

Adding Linear Dimensions to Given Centerlines

8-8 Angular Dimensions

Creating an Angular Dimension

Avoiding Overdimensioning

8-9 Ordinate Dimensions

Moving the Origin and the Origin Icon

Adding Ordinate Dimensions to an Object

8-10 Baseline Dimensions

Using the Baseline Dimension Tool

8-11 Continued Dimensions

Using the Continue Dimension Command

8-12 Quick Dimension

Using the Quick Dimension Tool

8-13 Center Mark

Adding Centerlines to a Given Circle

8-14 Mleader and Qleader

Creating a Quick Leader

Drawing a Curved Leader Line

Drawing a Leader Line with a Dot at Its End

8-15 Text Angle

Changing the Angle of Dimension Text

8-16 Tolerances

8-17 Dimensioning Holes

Dimensioning Individual Holes

Dimensioning Hole Patterns

8-18 Placing Dimensions

8-19 Fillets and Rounds

8-20 Rounded ShapesInternal

8-21 Rounded ShapesExternal

8-22 Irregular Surfaces

8-23 Polar Dimensions

8-24 Chamfers

8-25 Knurling

8-26 Keys and Keyseats

Table of Contents

8-27 Symbols and Abbreviations

8-28 Symmetry and Centerline

8-29 Dimensioning to Points

8-30 Coordinate Dimensions

8-31 Sectional Views

8-32 Orthographic Views

8-33 Very Large Radii

 Creating a Radius for Large Radii

8-34 Exercise Problems

Chapter 9 Tolerancing

9-1 Introduction

9-2 Direct Tolerance Methods

9-3 Tolerance Expressions

9-4 Understanding Plus and Minus Tolerances

9-5 Creating Plus and Minus Tolerances with AutoCAD

 Creating Plus and Minus Tolerances Using the Text Option

 Creating Plus and Minus Tolerances with the Text Override Tool

 Using Dtext to Create a Plus and Minus Tolerance

 Using the Dimension Style Manager

9-6 Limit Tolerances

9-7 Creating Limit Tolerances in AutoCAD

 Creating a Limit Tolerance Using the Dimension Style Manager

 Using the Properties Palette to Change an Existing Dimension to a Limit Tolerance
 Dimension

9-8 Angular Tolerances

 Setting the Precision for Angular Dimensions and Tolerances

 Creating an Angular Dimension and Tolerance

9-9 Standard Tolerances

9-10 Double Dimensioning

9-11 Chain Dimensions and Baseline Dimensions

 Creating Baseline Dimensions

9-12 Tolerance Studies

 Calculating As Maximum Length

 Calculating As Minimum Length

9-13 Rectangular Dimensions

Table of Contents

9-14 Hole Locations

9-15 Choosing a Shaft for a Toleranced Hole

For Linear Dimensions and Tolerances

9-16 Drawing Problem

9-17 Drawing Problem

9-18 Standard Fits (Metric Values)

Clearance Fits

Transition Fits

Interference Fits

9-19 Nominal Sizes

9-20 Hole and Shaft Basis

9-21 Drawing Problem

9-22 Standard Fits (Inch Values)

Fits Defined by Inch Values

9-23 Drawing Problem

9-24 Preferred and Standard Sizes

9-25 Surface Finishes

9-26 Surface Control Symbols

9-27 Drawing Problem

Floating Condition

Fixed Condition

Designing a Hole Given a Fastener Size

9-28 Exercise Problems

Chapter 10 Geometric Tolerances

10-1 Introduction

10-2 Tolerances of Form

10-3 Flatness

10-4 Straightness

10-5 Straightness (RFS and MMC)

10-6 Circularity

10-7 Cylindricity

10-8 Creating Geometric Tolerances in AutoCAD

Defining a Datum

Defining a Straightness Value

Table of Contents

- Creating a Positional Tolerance
- Creating a Basic Dimension
- Creating Basic Dimensions from Existing Dimensions
- Adding a Limit Feature Tolerance to a Hole
- Adding a Positional Tolerance to the Holes Feature Tolerance
- Adding a Geometric Tolerance with a Leader Line

10-9 Tolerances of Orientation

10-10 Datums

10-11 Perpendicularity

10-12 Parallelism

10-13 Angularism

10-14 Profiles

10-15 Runouts

10-16 Positional Tolerances

10-17 Virtual Condition

- Calculating the Virtual Condition for a Shaft

- Calculating the Virtual Condition for a Hole

10-18 Floating Fasteners

10-19 Drawing Problem

10-20 Drawing Problem

10-21 Fixed Fasteners

10-22 Drawing Problem

10-23 Design Problems

10-24 Exercise Problems

Chapter 11 Threads and Fasteners

11-1 Introduction

11-2 Thread Terminology

11-3 Thread CalloutsMetric Units

11-4 Thread CalloutsEnglish Units

11-5 Thread Representations

- Drawing a Detailed Thread Representation

- Creating an Internal Detailed Thread Representation in a Sectional View

- Creating a Schematic Thread Representation

- Creating an Internal Schematic Thread Representation

Table of Contents

Creating a Simplified Thread Representation

11-6 Orthographic Views of Internal Threads

11-7 Sectional Views of Internal Thread Representations

11-8 Types of Threads

11-9 How to Draw an External Square Thread

11-10 How to Draw an Internal Square Thread

11-11 How to Draw an External Acme Thread

11-12 Bolts and Nuts

11-13 Screws

11-14 Studs

11-15 Head Shapes

Drawing a Hexagon-Shaped (Hex) Head

Drawing a Square-Shaped Head

11-16 Nuts

Drawing a Hexagon-Shaped Finished Nut

Drawing a Locking Nut

11-17 Drawing Problem

11-18 Drawing Problem

11-19 Standard Screws

11-20 Set screws

11-21 Washers

Drawing a Plain Washer

11-22 Keys

11-23 Rivets

11-24 Springs

Drawing a Detailed Representation of an Extension Spring

Drawing a Detailed Representation of a Compression Spring

11-25 Tool Palettes

Creating a Shoulder Screw

Changing the Scale of a Tool Palette Block

Modifying the Block

11-26 Exercise Problems

Chapter 12 Working Drawings

12-1 Introduction

Table of Contents

12-2 Assembly Drawings

12-3 Drawing Formats (Templates)

Adding a Drawing Template

12-4 Title Block

Drawing Titles (Names)

Drawing Numbers

Company Name

Scale

Release Date

Sheet

12-5 Revision Block

12-6 Tolerance Block

12-7 Release Block

12-8 Parts List (Bill of Materials [BOM])

12-9 Detail Drawings

12-10 First-Angle Projection

12-11 Drawing Notes

12-12 Design Layouts

12-13 Drawing Problem

Creating the Design Layout

Creating a Drawing Using Layers

Creating a Drawing from a Layout

12-14 Drawing Problem

Creating an Assembly Drawing

12-15 Drawing Problem

12-16 Exercise Problems

Chapter 13 Gears, Bearings, and Cams

13-1 Introduction

13-2 Types of Gears

13-3 Gear Terminology

English and Metric Units for Spur Gears

13-4 Spur Gear Drawings

13-5 Drawing Problem

13-6 Drawing Problem

Table of Contents

Drawing Meshing Spur Gears

13-7 Drawing Problem

13-8 Selecting Spur Gears

13-9 Center Distance Between Gears

13-10 Drawing Problem

13-11 Combining Spur Gears

13-12 Gear Terminology Bevel

13-13 How to Draw Bevel Gears

Drawing a Matched Set of Beveled Gears

13-14 Worm Gears

13-15 Helical Gears

13-16 Racks

13-17 Ball Bearings

13-18 Drawing Problem

13-19 Bushings

13-20 Drawing Problem

13-21 Cam Displacement Diagrams

Setting Up a Displacement Diagram

13-22 Cam Motions

Uniform Motion

Modified Uniform Motion

Harmonic Motion

Uniform Acceleration and Deceleration

13-23 Cam Followers

13-24 Drawing Problem

13-25 Exercise Problems

Chapter 14 Fundamentals of 3D Modeling

14-1 Introduction

14-2 The World Coordinate System

Changing the Background Color to White

14-3 Viewpoints

Changing the Viewpoint by Using the View Command

Returning to the Original WCS Orientation

14-4 Perspective and Parallel Grids

Table of Contents

Creating a Drawing with a Perspective Grid

Returning to the 2D WCS

14-5 Setting the 3D Modeling Workspace

Accessing the 3D Modeling Mode

14-6 User Coordinate Systems

Drawing a Solid Box

Creating a UCS on the Top Surface

Saving a UCS

Returning to the WCS

Restoring a Saved UCS

Defining a UCS by Selecting Three Points

14-7 Editing a Solid Model

Changing the Size of a Solid Model

14-8 Visual Styles

Changing Visual Styles

14-9 Rotating a UCS Axis

14-10 Drawing Problem

14-11 Visual Errors

14-12 Drawing Problem

Drawing a Circle on the Upper Front Surface

Adding a Rectangle on the Top Surface

Adding an Ellipse on the Left Vertical Surface

14-13 Orthographic Views

Creating Orthographic Views

14-14 Line Thickness

Using the Thickness Variable

Drawing a Curve with Thickness

14-15 Using the Thickness Variable to Create Objects

Drawing the Box

Creating a New UCS

Drawing the Right Cylinder

Drawing the Top Cylinder

Returning the Drawing to Its Original Settings

14-16 Exercise Problems

Chapter 15 Advanced Modeling

Table of Contents

15-1 Introduction

15-2 Box

Drawing a Box (Corner Option)

Changing the Visual Style

Drawing a Box from Given Dimensions

Drawing a Cube

Using Dynamic Grips

15-3 Sphere

Drawing a Sphere

15-4 Cylinder

Drawing a Cylinder with a Circular Base

Drawing a Cylinder with an Elliptical Base

15-5 Cone

Drawing a Cone with an Elliptical Base

Drawing a Cone with a Circular Base

15-6 Wedge

Drawing a Wedge by Defining Its Corner Point

Drawing a Wedge by Defining Its Center Point

Aligning a Wedge with an Existing Wedge

15-7 Torus

Drawing a Torus

15-8 Extrude

Extruding a 2D Polyline

Creating a Polyline from Line Segments

15-9 Revolve

Creating a Revolved Solid Object

15-10 Helix

15-11 Sweep

15-12 Loft

15-13 Union and Subtract

Unioning Two Objects

Subtracting an Object

15-14 Intersect

15-15 Solid Modeling and UCSs

15-16 Combining Solid Objects

Table of Contents

- Setting Up the Drawing
- Drawing the First Box
- Creating the Internal Open Volume
- Creating the Top Cutout
- Creating a Box
- Creating a Wedge

15-17 Intersecting Solids

- Setting Up the Drawing
- Drawing the Cone
- Drawing the Cylinder
- Completing the 3D Model
- Creating Viewports for the Orthographic Views

15-18 Solid Models of Castings

- Drawing the Basic Shape
- Creating a Polyline from the Basic Shape
- Extruding the Shape
- Adding the Holes
- Creating the Rounded Edges

15-19 Thread Representations in Solid Models

15-20 List

15-21 Massprop

15-22 Face and Edge Editing

- Extruding a Face
- Extruding a Face Along a Path
- Extruding Two Faces at the Same Time
- Moving a Face
- Offsetting Faces
- Rotating a Face
- Tapering a Face
- Copying a Face
- Copying Edges
- Imprinting an Object

15-23 Exercise Problems

Index

Chapter 16 Projects (Online Only)

16-1 Introduction

Table of Contents

16-2 Project 1: Milling Vise

Creating the Milling Vise

Creating the Base Subassembly

Creating the Middle Subassembly

Creating the Top Subassembly

16-3 Project 2: Tenon Jig

Drawing the Clamping Subassembly

Drawing the Vertical Subassembly

Drawing the Base Plate Subassembly

Drawing the Guide Plate Subassembly

Creating an Assembly Drawing of the Tenon Jig

Appendix
