Introduction

Part 1: The cloud

1 Code and the cloud

What is the cloud?

The World Wide Web

Putting the web in the cloud

JavaScript

JavaScript heroes: functions

The JavaScript function object

Lifting the lid on JavaScript

References to JavaScript function objects

Function expressions

Function references as function arguments

Returning values from function calls

Returning multiple values from a function call

Make a console clock

Getting the date and time

Arrow functions

What you have learned

Table of Contents

2 Get into the cloud

Working in the cloud

- Git

- Storing Git repositories

- GitHub and open-source software

- Get Visual Studio code

How a web page works

- Loading a page and displaying it

Make an active web page

- Interact with the document object

- Web pages and events

Making a time travel clock

- Add buttons to a page

- Share values with global variables

Host a website on GitHub

What you have learned

3 Make an active site

Get input from a user

- The HTML input element

- Input types

Storing data on the local machine

JavaScript heroes: let, var, and const

Making page elements from JavaScript

- Cheese Finder

What you have learned

4 Host a website

Node.js

- JavaScript heroes: modules

- Create a module and require it

- require and import

- Using import in the browser

Table of Contents

The dark side of imported code

Make a web server

Serving from software

Serving out files

Active sites

What you have learned

Part 2: Make a cloud-based application

5 Build a shared application

Upgrade Cheese Finder

Adding some color

Add a game ending

Add randomness

Add more cheese

Even more cheese

Create a shared game

Design a protocol for a conversation

Create endpoints

Start the game

The game server

Play the game

What you have learned

6 Create a shared experience

Sharing gameplay

Create shared gameplay

Debug shared gameplay

Make pseudo-random values

Create a pseudo-random library

Generate timed randomness

Use worldwide time

Prepare for the cloud

Optimize performance

Table of Contents

Avoid recalculations

Improve structure

Buy a domain name

Put your name on it

Deploy an application

What you have learned

7 Design an application

The Tiny Survey application

Ethics, privacy, and security

Application workflow

Index page

Enter options

Select option

Display results

Extra workflows

Application data storage

JavaScript hero: classes

Classes for Tiny Survey

The Option class

The Survey class

The Surveys class

What you have learned

8 Build an application

Put on the style with Bootstrap

Getting started with Express

Express and node package manager

Express routes

Manage versions with Git

Use gitignore

Use page templates with EJS

Get the example application

Table of Contents

The index page

- Post data from a form

- Receive input from a post

Enter the survey options

- The enteroptions page

- Generate pages using an EJS template

- Use named route parameters

- Build a survey data object

Build a select option page

Record survey responses

Render the results

What you have learned

9 Turn professional

Modular code

- Comments/documentation

- Error checking

- Testing

- Logging

Professional coding

Store application status with cookies

- Cookies in Tiny Survey

- Cookie middleware

- Use cookies in Tiny Survey

What you have learned

Part 3: Building with cloud technologies

10 Store data

File data storage

- Synchronous file writing

- Asynchronous file writing

- JavaScript heroes: the Promise

- JavaScript heroes: await and async

Table of Contents

Using async in Tiny Survey

Refactoring Tiny Survey

Create route files

Handle file errors

Create error-handling middleware

Database storage

Start with MongoDB

Mongoose and schemas

The SurveyManagerDB class

Testing asynchronous code

Tiny Survey deployment

Manage environment variables

Code and deploy with the nodemon package

Create a README.md file

What you have learned

11 Activity tracking and sessions

User tracking

Create a Globally Unique Identifier (GUID)

User tracking ethics

Use activity diagrams to describe workflow

Cookies approval workflow

Create tracking middleware

Store survey creators

Recognize survey creators

Tiny Survey improvements

User sessions

Store user details

Register and login workflow

Register a user

Hashing passwords

The register route

User login

Table of Contents

Access tokens

- Create an access token

Authenticate tokens

Session renewal

Role-based security

- Creating the admin user

What you have learned

12 JavaScript technologies

Make your own cloud

- Installing node

- Host an application

- Use MongoDB on your server

- Shut down the server

- Running a server

Control hardware from a server

- Browser-controlled light

- Remote button

- Use WebSockets to send values from a server

- Make a WebSocket

Use MQTT

- MQTT in a node.js application

Create an Internet of Things network

- Create your own IoT devices

- Manage devices using the Connected Little Boxes server

Create a game using Phazer

- Serving static files from Express

Further development

- Typescript

- React

- Electron

- GraphQL

- Socket.io
