About the Authors

Chapter 1 Basic Concepts

- 1.1 Introduction
  - 1.1.1 Functioning of Transistors
  - 1.1.2 What Are the Problems with Power Delivery?
  - 1.1.3 Importance of Power Delivery in Microprocessors and ICs
  - 1.1.4 Power Delivery Network
  - 1.1.5 Transients on the Power Supply
- 1.2 Simple Relationships for Power Delivery
  - 1.2.1 Core Circuits
  - 1.2.2 I/O Circuits
  - 1.2.3 Delay Due to SSN
  - 1.2.4 Timing and Voltage Margin Due to SSN
  - 1.2.5 Relationship between Capacitor and Current
- 1.3 Design of PDNs
  - 1.3.1 Target Impedance
  - 1.3.2 Impedance and Noise Voltage
- 1.4 Components of a PDN
  - 1.4.1 Voltage Regulator

Pearson

Table of Contents

    - 1.4.2 Bypass or Decoupling Capacitors
    - 1.4.3 Package and Board Planes
    - 1.4.4 On-Chip Power Distribution
    - 1.4.5 PDN with Components
  - 1.5 Analysis of PDNs
    - 1.5.1 Single-Node Analysis
    - 1.5.2 Distributed Analysis
  - 1.6 Chip-Package Antiresonance: An Example
  - 1.7 High-Frequency Measurements
    - 1.7.1 Measurement of Impedance
    - 1.7.2 Measurement of Self-Impedance
    - 1.7.3 Measurement of Transfer Impedance
    - 1.7.4 Measurement of Impedance by Completely Eliminating Probe Inductance
  - 1.8 Signal Lines Referenced to Planes
    - 1.8.1 Signal Lines as Transmission Lines
    - 1.8.2 Relationship between Transmission-Line Parameters and SSN
    - 1.8.3 Relationship between SSN and Return Path Discontinuities
  - 1.9 PDN Modeling Methodology
  - 1.10 Summary
- Chapter 2 Modeling of Planes
  - 2.1 Introduction
  - 2.2 Behavior of Planes
    - 2.2.1 Frequency Domain
    - 2.2.2 Time Domain
    - 2.2.3 Two-Dimensional Planes
  - 2.3 Lumped Modeling Using Partial Inductances

Pearson

Table of Contents

2.3.1 Extracting the Inductance and Resistance Matrices

2.4 Distributed Circuit-Based Approaches

2.4.1 Modeling Using Transmission Lines

2.4.2 Transmission Matrix Method (TMM)

2.4.3 Frequency-Dependent Behavior of Unit-Cell Elements

2.4.4 Modeling of Gaps in Planes

2.5 Discretization-Based Plane Models

2.5.1 Finite-Difference Method

2.5.2 Finite-Difference Time-Domain Method

2.5.3 Finite-Element Method

2.6 Analytical Methods

2.6.1 Cavity Resonator Method

2.6.2 Network Representation of the Cavity Resonator Model

2.7 Multiple Plane Pairs

2.7.1 Coupling through the Vias

2.7.2 Coupling through the Conductors

2.7.3 Coupling through the Apertures

2.8 Summary

Chapter 3 Simultaneous Switching Noise

3.1 Introduction

3.1.1 Methods for Modeling SSN

3.2 Simple Models

3.2.1 Modeling of Output Buffers

3.3 Modeling of Transmission Lines and Planes

3.3.1 Microstrip Configuration

3.3.2 Stripline Configuration

3.3.3 Conductor-Backed Coplanar Waveguide Configuration

3.3.4 Summary of Modal Decomposition Methods

Table of Contents

- 3.4 Application of Models in Time-Domain Analysis
  - 3.4.1 Plane Bounce from Return Currents
  - 3.4.2 Microstrip-to-Microstrip Via Transition
  - 3.4.3 Split Planes
- 3.5 Application of Models in Frequency-Domain Analysis
  - 3.5.1 Stripline between a Power and a Ground Plane
  - 3.5.2 Microstrip-to-Stripline Via Transition
  - 3.5.3 Reduction of Noise Coupling Using Thin Dielectrics
- 3.6 Extension of M-FDM to Incorporate Transmission Lines
  - 3.6.1 Analysis of a Complex Board Design
- 3.7 Summary

Chapter 4 Time-Domain Simulation Methods
- 4.1 Introduction
- 4.2 Rational Function Method
  - 4.2.1 Basic Theory
  - 4.2.2 Interpolation Schemes
  - 4.2.3 Properties of Rational Functions
  - 4.2.4 Passivity Enforcement
  - 4.2.5 Integration in a Circuit Solver
  - 4.2.6 Disadvantages
- 4.3 Signal Flow Graphs
  - 4.3.1 Causality
  - 4.3.2 Transfer-Function Causality
  - 4.3.3 Minimum Phase
  - 4.3.4 Delay Extraction from Frequency Response
  - 4.3.5 Causal Signal Flow Graphs
  - 4.3.6 Computational Aspects in SFG
  - 4.3.7 Fast Convolution Methods

Table of Contents

- 4.3.8 Cosimulation of Signal and Power Using SFGs
- 4.4 Modified Nodal Analysis (MNA)
  - 4.4.1 What Is MNA?
  - 4.4.2 Frequency Domain
  - 4.4.3 Time Domain
  - 4.4.4 MNA Formulation with S-Parameters
- 4.5 Summary

Chapter 5 Applications

- 5.1 Introduction
- 5.2 High-Speed Servers
  - 5.2.1 Core PDN Noise
  - 5.2.2 I/O PDN Noise
  - 5.2.3 Summary
- 5.3 High-Speed Differential Signaling
  - 5.3.1 Test Vehicle Description
  - 5.3.2 Plane Modeling
  - 5.3.3 Modeling of Master and Slave Islands
  - 5.3.4 Rational Function Modeling
  - 5.3.5 Modal Decomposition and Noise Simulation
  - 5.3.6 Summary
- 5.4 Analysis of IC Packages
  - 5.4.1 Simulation of a Multilayered Package Using M-FDM
  - 5.4.2 Causal Simulation of HyperBGA Package
  - 5.4.3 Summary
- 5.5 Extraction of Dielectric Constant and Loss Tangent
  - 5.5.1 Problem Definition
  - 5.5.2 Corner-to-Corner Plane-Probing Method
  - 5.5.3 Causal Model Development

Table of Contents

- 5.5.4 Summary
- 5.6 Embedded Decoupling Capacitors
  - 5.6.1 Embedded Individual Thin- or Thick-Film Capacitors
  - 5.6.2 Why Embed Individual Capacitors
  - 5.6.3 Design of an Embedded Thick-Film Capacitor Array
  - 5.6.4 Integration of Embedded Capacitors into IBM Package
  - 5.6.5 Embedded Planar Capacitors
  - 5.6.6 Summary
- 5.7 Electromagnetic Bandgap (EBG) Structures
  - 5.7.1 Basic Theory
  - 5.7.2 Response of EBG Structures
  - 5.7.3 Dispersion-Diagram Analysis
  - 5.7.4 Modification of M-FDM Using Fringe and Gap Fields
  - 5.7.5 Scalable Design of EBG Structures for Power Plane Isolation
  - 5.7.6 DigitalRF Integration
  - 5.7.7 ADC Load-Board Design
  - 5.7.8 Issues with EBG Structures for Digital Systems
  - 5.7.9 Summary
- 5.8 Future Challenges

Appendix A
- A.1 Multiport Networks
- A.2 Matrix Representation of Transmission Lines
- A.3 Spectrum of Digital Signals

Appendix B: Software list
