Contents at a Glance

Contents

Introduction

Part I Introduction

Chapter 1 MPLS in a Nutshell

How MPLS Operates

MPLS Label Structure

Control Plane and Data Plane

Label Distribution Protocol (LDP)

Label Allocation Mechanism

MPLS Label Operations

Traffic Forwarding Using Labels

MPLS VPN Services Overview

MPLS Traffic Protection

Challenges and Shortcomings of MPLS

MPLS Label Space Limitation

LSP and Summarization

Inter-AS Limitations

Lack of End-to-end QoS Control

Configuration and Operational Complexity of MPLS/VPN and BGP

RSVP-Based Traffic Engineering

Table of Contents

LDPIGP Synchronization

Load Balancing and Hashing

Beyond MPLS

Summary

References and Additional Reading

Chapter 2 What Is Segment Routing over MPLS (SR-MPLS)?

Problem Description and Requirements

Segment Routing over MPLS (SR-MPLS)

Data Plane

Segment Identifier (SID)

SID Allocation

IGP Prefix Segment (Prefix SID)

IGP Adjacency Segment (Adjacency SID)

BGP Prefix Segment (BGP Prefix SID)

BGP Peering Segments (BGP Peering SIDs)

Binding Segment (Binding SID)

IGP Extensions

IS-IS Extensions for Segment Routing (RFC 8667)

OSPF Extensions for Segment Routing (RFC 8665)

IGP Flexible Algorithm (Flex Algo) (RFC 9350)

MP-BGP Extensions

SR Prefix SID Extensions for BGP (RFC 8669)

BGP Link-State Extensions for SR (RFC 9085)

BGP Link-State Extensions for SR BGP Egress Peer Engineering (RFC 9086)

Summary

References and Additional Reading

Chapter 3 What Is Segment Routing over IPv6 (SRv6)?

Introduction

Segment Routing over IPv6 (SRv6)

IPv6 for SRv6 Recap

SRv6 Network Programming (RFC 8986)

SRv6 Segment Identifier (SID)

Table of Contents

- IPv6 Segment Routing Header (SRH) (RFC 8754)
- Penultimate Segment Pop of the SRH
- Ultimate Segment Pop of the SRH
- Ultimate Segment Decapsulation
- SRv6 Policy Headend Behaviors
- SRv6 Policy Endpoint Behaviors
- SRv6 Headend and Endpoint Behavior Overview
- SRv6 Network Programming Extension: SRv6 uSID Instruction
- uN Endpoint Variants
- uA Endpoint Variants
- SID Compression
- Addressing Considerations
- IPv6 Addressing
- SRv6 Locator Addressing Scheme
- Summarization
- IGP Extensions
- IS-IS Extensions for Segment Routing over IPv6 (RFC 9352)
- MP-BGP Extensions
- BGP Overlay Services on SRv6 (RFC 9252)
- BGP Link-State Extensions for SRv6 (RFC 9514)

SR-Powered Network Evolution

- MPLS Network Architecture: Control and Data Plane Overview
- SR-MPLS Network Architecture: Control and Data Plane Overview
- SRv6 Network Architecture: Control and Data Plane Overview
- Network Evolution at a Glance

SR-MPLS or SRv6

- Benefits of Deploying Segment Routing
- Hardware and Software Support
- Feature Support

Summary

References and Additional Reading

Part II Segment Routing

Table of Contents

Chapter 4 Segment Routing in Detail

Link-State IGPs

- IS-IS
- IS-IS Levels
- IS-IS Areas
- IS-IS Router Types
- IS-IS Routing
- IS-IS Route Propagation and Leaking
- IS-IS Overload Bit
- OSPF
- OSPF SPF Algorithm
- OSPFv3
- OSPFv3 Route Summarization
- OSPFv3 Route Filtering

Segment Routing Baseline

- SR-MPLS Baseline
- Segment Routing Global Block (SRGB)
- Segment Routing Local Block (SRLB)
- SR-MPLS Addressing
- SR-MPLS Configuration
- SR-MPLS Verification
- SRv6 Baseline
- SRv6 uSID
- SRv6 Addressing
- SRv6 uSID Configuration
- SRv6 uSID Verification

Segment Routing Control Plane (IGP)

- SR-MPLS Control Plane
- SR-MPLS IS-IS
- SR-MPLS OSPF
- SR-MPLS Anycast SID
- SRv6 Control Plane
- SRv6 IS-IS

Table of Contents

SRv6 OSPF

Multiplane Topologies with Flex Algos

Components of SR Flex Algos

Flex Algo Use Cases Scenarios

SR-MPLS Configuration for Flex Algo Use Cases

Segment Routing Control Plane (BGP)

BGP Prefix SID

BGP Prefix SID Configuration

BGP Prefix SID Verification

Intra-AS BGP-LU with a BGP Prefix SID

Intra-AS BGP-LU Design

BGP Additional Path

Intra-AS BGP-LU Configuration

Intra-AS BGP-LU Verification

Data Forwarding from PE-1 to PE-3

Inter-AS BGP-LU

Inter-AS BGP-LU Design

Inter-AS BGP-LU Configuration

Inter-AS BGP-LU Verification

Data Forwarding from PE-1 to PE-5

Summary

References and Additional Reading

Chapter 5 Migrating to Segment Routing

Deployment Models

Migration Strategies

SR-MPLS Migration

SR-MPLS Reference Network Topology

Enabling SR-MPLS in an Existing Network (Coexistence)

Enabling SR-MPLS on P2, P3, and PE-3

Enabling and Preferring SR-MPLS on P1, P2, and PE-1

Building a New SR-MPLS Network

Enabling SRMS

Table of Contents

Enabling LDP on the Border Node

Enabling the BGP Prefix SID in an SR-MPLS Network

BGP Proxy Prefix SID

SRv6 Migration

Building a New SRv6 Network Using an SRv6 IWG

Migration Use Case

Building a New SRv6 Network Using Inter-AS Option A

Migration Use Case

Building a New SRv6 Network Using Dual-Connected PE Devices

Migration Use Case

High Availability

Active-Active

Active-Backup

Load Sharing

Migration Paths from MPLS to SRv6

Flat MPLS Network

Unified MPLS Network

MPLS Network with Inter-AS Option C

Carrier Supporting Carrier MPLS Network

Summary

References and Additional Reading

Part III Service Design

Chapter 6 L2VPN Service Deployment: Configuration and Verification

Techniques

L2VPN (EVPN)

EVPN in Detail

EVPN Instance (EVI)

Ethernet Segment (ES)

Ethernet Tag ID

EVPN BGP Routes

EVPN E-LAN

SRv6 EVPN E-LAN Service Configuration and Verification

Table of Contents

EVPN E-Tree

SRv6 EVPN E-Tree Service Configuration

EVPN E-Line

SRv6 EVPN E-Line (VPWS) Service Configuration

Summary

References and Additional Reading

Chapter 7 L3VPN Service Deployment: Configuration and Verification Techniques

L3VPN

SRv6 L3VPN Overlay Service

SRv6 L3VPN Full-Mesh Service

SRv6 L3VPN Hub-and-Spoke Service

SRv6 L3VPN Extranet Service

SR-MPLS L3VPN Overlay Service

SR-MPLS L3VPN Full-Mesh Service

SR-MPLS L3VPN Hub-and-Spoke Service

SR-MPLS L3VPN Extranet Service

Route Target Constraint

Route Target Constraint Configuration and Verification

Summary

References and Additional Reading

Chapter 8 Service Assurance

Transport

Segment Routing Data Plane Monitoring (SR-DPM)

SR-DPM Configuration and Verification

Path Tracing (PT)

Services

L2VPN Service Assurance

Ethernet Connectivity Fault Management (CFM)

ITU-T Y.1731 Performance Measurement

L3VPN Service Assurance

IPSLA and TWAMP

Table of Contents

Summary

References and Additional Reading

Chapter 9 High Availability and Fast Convergence

BFD Failure Detection Mechanism

BFD BoB Configuration

BFD BoB Verification

BFD BLB Configuration

BFD BLB Verification

Topology-Independent Loop-Free Alternate (TI-LFA)

Link Protection Configuration

Link Protection Verification: SR-MPLS

Link Protection Verification: SRv6

Node Protection Configuration

Node Protection Verification: SR-MPLS

Node Protection Verification: SRv6

SRLG Protection Configuration

SRLG Protection Verification: SR-MPLS

SRLG Protection Verification: SRv6

Microloop Avoidance

BGP PIC Edge

BGP PIC Edge Configuration: SR-MPLS

BGP PIC Edge Verification: SR-MPLS

BGP PIC Edge Configuration: SRv6

BGP PIC Edge Unipath Verification: SRv6

BGP PIC Edge Multipath Verification: SRv6

Summary

References and Additional Reading

Part IV Business and Operational Considerations

Chapter 10 Business Opportunities

Technological Opportunities and Benefits

Fewer Protocols

Table of Contents

More QoS Options
SR from the Access Network to the Data Center Network
Traffic Engineering and Network Slicing
Scale
Routed Optical Networks
Benefit 1: Simplified Long-Distance Connectivity
Benefit 2: Easier and Cost-Effective Scaling
Benefit 3: Simplified Redundancy
Private Line Emulation
Integrated Visibility
Intent-Driven Configuration of Visibility Features
Intent-/Model-Based Assurance
High-Precision Probing
Path Tracing
New Hardware Generation

CapEx Savings

OpEx Savings

Business Case Guidance

Summary

References and Additional Reading

Chapter 11 Organizational Considerations

Scenario 1: Replacing or Enhancing a Legacy Network with SR

Knowledge
Migration Strategy
IT Evolution and Gap Awareness

Scenario 2: Consolidating Networks and Services

Domain Definitions
Domain Architecture Blueprint
Domain Responsibilities and Their Architectural Implications
Domain Organization and Transformation
Existing and New Processes
Service Portfolio Consolidation

Table of Contents

Development and Release Methodology

Process with a Clear Flow

Environments

Domain Releases: A Symphony of Component Builds and Release Candidates

Tooling: Embracing Automation for Environment and Process Efficiency

Tooling: Source of Truth

Tooling: Binary Repository

Tooling: Pipelines

Change Management Across Domains

Summary

References and Additional Reading

Appendix A Reference Diagrams and Information

SR-MPLS Reference Network

SRv6 Reference Network

SR Migration Reference Network

Index

Online Element:

Chapter 12 SRv6 Ecosystem Deployment Use Cases

SRv6 Open-Source Implementations

Linux Kernel

Free Range Routing (FRR)

Vector Packet Processor (VPP)

Software for Open Networking in the Cloud (SONiC)

SRv6 Open-Source Lab Deployment Examples

Linux SRv6 Deployment

Containerlab

Linux Underlay Connectivity

Linux IPv4 L3VPN Service

Linux IPv6 L3VPN Service

Linux IPv4/IPv6 L3VPN Service

Linux Point-to-Point L2VPN Service

Table of Contents

VPP SRv6 Deployment

Basic VPP Setup

VPP Underlay Connectivity

VPP IPv4 L3VPN Service

VPP IPv6 L3VPN Service

VPP Point-to-Point L2VPN Service

SRv6 L3VPN Interoperability

Free Range Routing IPv4 L3VPN Service

Cisco Catalyst 8000V Edge IPv4 L3VPN Service
