# Thinking Mathematically

Second  
Edition

# **Thinking Mathematically**

# Thinking Mathematically

## Table of Contents

Front Cover

Thinking Mathematically

Contents

Introduction to First Edition

Introduction to Second Edition

Everyone can start

- Specializing

- Generalizing

- Writing yourself notes

- Review and preview

- Reference

Phases of work

- Three phases

- The Entry phase

- Entry 1: What do I KNOW?

- Entry 2: What do I WANT?

- Entry 3: What can I INTRODUCE?

- Entry summarized

- The Attack phase

- The Review phase

- Review 1: CHECK the resolution

- Review 2: REFLECT on the key ideas and key moments

# **Table of Contents**

Review 3: EXTEND to a wider context

Practising Review

Review summarized

The three phases summarized

Reference

## **Responses to being STUCK**

Being STUCK

Summary

## **ATTACK: conjecturing**

What is conjecturing?

Conjecture: backbone of a resolution

How do conjectures arise?

Discovering pattern

Summary

## **ATTACK: justifying and convincing**

Structure

Seeking structural links

When has a conjecture been justified?

Developing an internal enemy

Summary

Reference

## **Still STUCK?**

Distilling and mulling

Specializing and generalizing

Hidden assumptions

Summary

# **Table of Contents**

References

## **Developing an internal monitor**

Roles of a monitor

Emotional snapshots

Getting started

Getting involved

Mulling

Keeping going

Insight

Being sceptical

Contemplating

Summary

## **On becoming your own questioner**

A spectrum of questions

Some questionable circumstances

Noticing

Obstacles to a questioning attitude

Summary

Reference

## **Developing mathematical thinking**

Improving mathematical thinking

Provoking mathematical thinking

Supporting mathematical thinking

Sustaining mathematical thinking

Summary

Reference

## **Something to think about**

# **Table of Contents**

References

Thinking mathematically in curriculum topics

Place value and arithmetic algorithms

Factors and primes

Fractions and percentages

Ratios and rates

Equations

Patterns and algebra

Graphs and functions

Functions and calculus

Sequences and iteration

Mathematical induction

Abstract algebra

Perimeter, area and volume

Geometrical reasoning

Reasoning

References

Powers, themes, worlds and attention

Natural powers and processes

Mathematical themes

Mathematical worlds

Attention

Summary

Bibliography

Subject index

Index of questions

# **Table of Contents**
