MARKETING RESEARCH WITH SPSS

Marketing Research with SPSS

Table of Contents

Front Cover

Marketing Research with SPSS

Contents

Preface

Statistical analyses for marketing research: when and how to use them

- Descriptive statistics

- Univariate statistics

- Multivariate statistics

Working with SPSS

- Chapter objectives

- General

- Data input

- Data editing

- Further reading

Descriptive statistics

- Chapter objectives

- Introduction

- Frequency tables and graphs

- Multiple response tables

- Mean and dispersion

- Further reading

Univariate tests

- Chapter objectives

Table of Contents

General

One sample

Two dependent samples

Two independent samples

K independent samples

K dependent samples

Further reading

Analysis of variance

Chapter objectives

Technique

Example 1: Analysis of variance as a test of difference or one-way
ANOVA

Example 2: Analysis of variance with a covariate (ANCOVA)

Example 3: Analysis of variance for a complete $2 \times 2 \times 2$ factorial design

Example 4: Multivariate analysis of variance (MANOVA)

Example 5: Analysis of variance with repeated measures

Example 6: Analysis of variance with repeated measures and
between-subjects factor

Further reading

Endnote

Linear regression analysis

Chapter objectives

Technique

Example 1: A cross-section analysis

Example 2: The Stepwise method, in addition to the Enter method

Example 3: The presence of a nominal variable in the regression model

Further reading

Endnotes

Logistic regression analysis

Table of Contents

Chapter objectives

Technique

Example 1: Interval-scaled and categorical independent variables, without interaction term

Example 2: Interval-scaled and categorical independent variables, with interaction term

Example 3: The stepwise method, in addition to the enter method, and more than one block

Example 4: Categorical independent variables with more than two categories

Further reading

Endnotes

Exploratory factor analysis

Chapter objectives

Technique

Example: Exploratory factor analysis

Further reading

Endnote

Confirmatory factor analysis and path analysis using SEM

Chapter objectives

Technique

Example 1: Confirmatory factor analysis

Example 2: Path analysis

Further reading

Cluster analysis

Chapter objectives

Technique

Example 1: Cluster analysis with binary attributes hierarchical clustering

Example 2: Cluster analysis with continuous attributes hierarchical

Table of Contents

clustering as input for K-means clustering

Further reading

Endnotes

Multidimensional scaling techniques

Chapter objectives

Technique

Example 1: Two-way, two-mode MDS correspondence analysis

Example 2: Three-way, two-mode MDS two-way, one-mode MDS
using replications in PROXSCAL

Further reading

Website reference

Endnotes

Conjoint analysis

Chapter objectives

Technique

Example: Conjoint analysis

Further reading
