**HOW TO
USE
STATISTICS**

How to Use Statistics

Table of Contents

Cover

How to use Statistics

Contents

Preface and acknowledgements

How to use this book

A note on mathematics, rounding, calculators and
computer software

Introductory statistics

Introduction to statistics and data

Presentation of data

Averages

Cumulative frequencies and percentiles

Measures of dispersion

Working with frequency distributions

Essential mathematics

Factorials, permutations and combinations

Sigma notation

Correlation and regression

Correlation

Table of Contents

Linear regression

Probability

An introduction to probability

Multiple probabilities

Probability trees

Expected values and decision criteria

Conditional probability

Probability distributions

Introduction to probability distributions

The Poisson distribution

The normal distribution

The binomial distribution

Hypothesis testing

Introduction to hypothesis testing

z-tests

t-tests

X²-tests

Statistical tables

Table A The normal distribution $N(0,1)$

Table B Critical values and confidence limits for the
z-test

Table C1 The one-tailed t-test

Table C2 The two-tailed t-test

Table D Critical values for the X² distribution

Table of Contents

Table E1 Critical values for the F-test (5%)

Table E2 Critical values for the F-test (1%)

Summary, glossary and appendices

Summary and further work

Glossary

Appendix 1 Use of a calculator test

Appendix 2 The Greek alphabet

Appendix 3 Some useful Excel commands

Solutions to exercises
