Part 1 Introducing research methods

1 Starting out in research

Introduction

1.1 Why research?

1.2 A very brief history of science

1.3 Quantitative versus qualitative?

1.4 A brief introduction to methods in the social sciences

1.5 Planning research

Further reading

2 Variables: definitions and measurement

Introduction

2.1 Operationalising variables

2.2 Independent and dependent variables

2.3 The problem of error and confounding variables

2.4 Levels of measurement

2.5 Categorical and continuous variables

Further reading

3 Reliability, validity, sampling and groups

Introduction

3.1 Reliability

# **Table of Contents**

3.2 Validity

3.3 The role of replication in the social sciences

3.4 Populations and samples

3.5 The problem of sampling bias

3.6 Methods of sampling

3.7 Sample sizes

3.8 Control and placebo groups

Further reading

## **4 Collecting data 1: interviews and observation**

Introduction

4.1 Interviewing

4.2 Types, purposes and structures of interviews

4.3 Interview techniques

4.4 Group discussions

4.5 Repertory grid techniques

4.6 Observation

4.7 Structured and non-participant observation

4.8 Participant observation

Further reading

## **5 Collecting data 2: questionnaires and psychometric tests**

Introduction

5.1 Questionnaires

5.2 The first rule of questionnaire design: don't reinvent the wheel

5.3 General principles, types and structure of questionnaires

5.4 Writing questions and measuring attitudes

5.5 Psychometrics

5.6 Reliability

5.7 Validity

5.8 Psychometric tests

Further reading

## **6 Collecting data 3: experimental and quasi-experimental designs**

Introduction

6.1 The role of experiments in psychology

6.2 Types of experiment

# **Table of Contents**

- 6.3 Identifying four sources of error in experiments
- 6.4 Four ways to reduce error in experiments
- 6.5 Types of experimental design
- 6.6 Running an experiment
- 6.7 Describing an experiment: a note about causality
- 6.8 Returning to the basics of design
- Further reading

## **7 E-research**

- Introduction
- 7.1 Types of e-research
- 7.2 A warning what is the population?
- 7.3 E-research and online topics
- 7.4 E-research and offline topics
- 7.5 Ethical issues in e-research
- Further reading

## **Part 2 Analysing quantitative data**

### **8 Fundamentals of statistics**

- Introduction
- 8.1 Descriptive and inferential statistics
- 8.2 Measures of central tendency and dispersion
- 8.3 Probability
- 8.4 Levels of significance
- 8.5 The normal distribution
- 8.6 Understanding z-scores
- 8.7 Standard error
- 8.8 Parametric versus non-parametric tests
- Further reading

### **9 Entering and manipulating data**

- Introduction
- 9.1 First steps with SPSS
- 9.2 The Data Editor window
- 9.3 Defining variables
- 9.4 Entering data
- 9.5 Saving and opening data files

# **Table of Contents**

9.6 Sorting and splitting files

9.7 Selecting cases

9.8 Recoding variables

9.9 Computing new variables

Further reading

## **10 Graphical representation and descriptive statistics**

Introduction

10.1 Descriptive statistics

10.2 Simple and complex bar charts

10.3 Histograms

10.4 Pie charts

10.5 Box plots

10.6 Scattergrams

10.7 Editing charts

## **11 Bivariate analysis 1: exploring differences between variables**

Introduction

11.1 Theoretical issues in inferential statistics

11.2 Introducing the t-test

11.3 Calculating an independent groups t-test

11.4 Calculating a related t-test

11.5 Introducing non-parametric tests of difference

11.6 Calculating a MannWhitney U-test

11.7 Calculating a Wilcoxon test

## **12 Bivariate analysis 2: exploring relationships between variables**

Introduction

12.1 Introducing chi-square

12.2 Calculating chi-square

12.3 Introducing correlation coefficients

12.4 Calculating correlation coefficients

## **13 Analysis of variance (ANOVA)**

Introduction

13.1 Terminology and techniques

13.2 Calculating a one-way ANOVA

13.3 Calculating a two-way ANOVA

# **Table of Contents**

13.4 Calculating a mixed design ANOVA

13.5 Non-parametric alternatives KruskalWallis and Friedman

## **14 Multivariate analysis of variance (MANOVA)**

Introduction

14.1 When would you use MANOVA?

14.2 Introduction to MANOVA

14.3 Calculating a MANOVA

14.4 Running a discriminant function analysis

Further reading

## **15 Regression**

Introduction

15.1 Terminology and techniques

15.2 Calculating multiple regression using SPSS

Further reading on statistics

Statistical test flowchart

## **16 Exploratory factor analysis (EFA)**

Introduction

16.1 What is a latent variable?

16.2 Fundamentals of EFA

16.3 What is the difference between factor analysis and PCA?

16.4 Creating scale scores manually

Further reading

## **17 Introducing R and R commander**

Introduction

17.1 What is R?

17.2 Installing new R libraries

17.3 The R commander

17.4 Importing data into R

17.5 Getting started with R code

17.6 Making comments

17.7 Basic R commands

17.8 Vectors

17.9 Large and small numbers

17.10 Save your code

# **Table of Contents**

- 17.11 Creating and saving a data frame
- 17.12 Graphs
- 17.13 Independent t-test
- 17.14 Related t-test
- 17.15 MannWhitney test
- 17.16 Wilcoxon test
- 17.17 Chi square
- 17.18 Correlation and linear regression
- 17.19 Multiple regression
- 17.20 One-way ANOVA
- 17.21 Two-way ANOVA
- 17.22 Repeated measures ANOVA
- 17.23 Reshaping wide format data into long format
- 17.24 Exploratory factor analysis
- Further R resources
- Further reading

## **Part 3 Analysing qualitative data**

### **18 Fundamentals of qualitative research**

- Introduction
- 18.1 Philosophical underpinnings: the old paradigm
- 18.2 Philosophical underpinnings: the new paradigm
- 18.3 Revisiting the qualitative versus quantitative debate
- 18.4 Limitations of the new paradigm for the social sciences
- 18.5 Varieties of qualitative methods and analysis
- Further reading

### **19 Transcribing, coding and organising textual data**

- Introduction
- 19.1 Purposes and principles of transcription
- 19.2 Systems of transcription
- 19.3 Transcription as analysis
- 19.4 Coding qualitative data
- 19.5 Thematic analysis
- 19.6 Organising and presenting the analysis of textual data
- Further reading

# **Table of Contents**

## **20 Phenomenological research methods**

Introduction

20.1 The fundamentals of phenomenology: philosophical issues

20.2 The fundamentals of phenomenology: methodological issues

20.3 Searching for meaning: phenomenological psychology and the Duquesne School

20.4 Searching for meaning: interpretative phenomenological analysis (IPA)

20.5 Strengths, limitations and debates

Further reading

## **21 Grounded theory**

Introduction

21.1 Introducing grounded theory

21.2 Collecting data

21.3 The dynamic nature of meaning making

21.4 Coding

21.5 Memo-writing

21.6 Theory development

21.7 Strengths, limitations and debates

Further reading

## **22 Discourse analysis**

Introduction

22.1 The turn to language

22.2 Approaches to the study of discourse

22.3 Discursive psychology

22.4 Foucauldian discourse analysis

22.5 Strengths, limitations and debates

Further reading

## **23 Life story and narrative research**

Introduction

23.1 The turn to narrative

23.2 Selecting informants

23.3 Collecting data

23.4 Triangulation

23.5 Analysing life story data

23.6 Writing a life story

# **Table of Contents**

23.7 Narrative practice and form

23.8 Strengths, limitations and debates

Further reading

## **24 The use of computers in qualitative research**

Introduction

24.1 Use of computers in qualitative research

24.2 Qualitative analysis software

24.3 Introducing qualitative analysis software

24.4 Fundamentals of using QDA software

24.5 Controversies and debates

Further reading

## **25 Mixed methods**

Introduction

25.1 Similarities between methods

25.2 Four models of (sequenced) mixed methods

25.3 Four models of triangulated methods

25.4 Blended or 'hybrid' methods

25.5 Q method

25.6 Other hybrid methods

25.7 A final comment

Further reading

Resources: Q method

## **Part 4 Ethics and reporting findings**

### **26 The ethics and politics of psychological research**

Introduction

26.1 Ethical fundamentals

26.2 BPS Code of Human Research Ethics principles

26.3 Respect for the autonomy and dignity of persons

26.4 Scientific value

26.5 Social responsibility

26.6 Maximising benefit and minimising harm

26.7 Other named issues in the Code of Human Research Ethics

26.8 Research with (non-human) animals

26.9 Equal opportunities

# **Table of Contents**

26.10 Politics and psychological research

26.11 Evaluation research

26.12 The need for balance

Further reading

## **27 Reporting and presenting findings**

Introduction

27.1 The standard scientific report style

27.2 An example quantitative report (with commentary)

27.3 Writing up qualitative research

27.4 Writing skills

27.5 Presenting research writing for publication

Further reading

**Appendix: Tables of critical values for statistical tests**

**References**

**Index**
