About the author

Contents

Introduction

1 Recording and running macros

- Record a macro

- Run a macro

- Edit a macro

- Delete a macro

- Record a macro using relative references

- Record a macro using relative references

- Assign a macro to a keyboard shortcut

- Run a macro by clicking a shape

- Add a macro to the Quick Access Toolbar

- Customise a Quick Access Toolbar button

- Save a macro-enabled workbook

- Manage Excel 2010 security settings

- Change Protected View settings

- Change message bar settings

- Change data connection security settings

Table of Contents

Add a digital signature to a workbook

2 Starting with the Visual Basic Editor

Introduce object-orientated programming

Display the Developer ribbon tab

Display the Visual Basic Editor

Set project properties

Create a code module

Create a subroutine

Create a function

Add a comment to your code

Run a VBA routine

Rename a code module

Delete a code module

Export a code module to a text file

3 Working with data and variables

Understand data types in Excel VBA

Declare a variable

Require variable declaration before use

Manage variable scope

Perform calculations using mathematical operators

Define constant

Define a static variable

Define an array

Define a multidimensional array

Redefine an array

Define a dynamic array

Display an object type

Table of Contents

Define an object variable

4 Managing workbooks and files

Open a workbook

Open a text file as a workbook

Open a file the user selects

Save a workbook

Save a workbook in a different format

Detect if a workbook is open

Close a workbook

Create a new workbook

Delete a file

5 Managing worksheets

Add a worksheet

Delete a worksheet

Move a worksheet

Copy a worksheet

Hide or unhide a worksheet

Rename a worksheet

Protect a worksheet

Print a worksheet

6 Managing ranges

Activate a cell range

Select a cell range

Select the active region

Refer to cells using Offset

Insert a cell range

Delete a cell range

Table of Contents

Hide a worksheet columns or rows

Create a named range

Resize a selected range

Set the column width

Set the row height

7 Managing cells

Cut and paste a cell range

Copy and paste a cell ranges

Copy and paste a cell ranges using PasteSpecial

Transpose a column into a row

Create a cell comment

Display a cells comment

Hide a cells comment

Delete one or all cell comments

Fill a range of cells automatically

Copy a range to multiple sheets

Add a cell border

Find a cell value

Replace a cell value

8 Formatting worksheets and worksheet elements

Apply bold, italic and underline formatting

Change a cells font

Change a cells font size

Change a cells font colour

Change a cells fill colour

Change a cells alignment

Apply a cell style

Table of Contents

Apply a number format to a cell

Clear a cells format

9 Sorting and filtering

Sort cell data using a single criterion

Create a multilevel sort

Sort using a customised list of values

Turn on filter arrows using VBA code

Apply a filter using a single criterion

Remove a filter

Display a list of unique values

Filter data to display two values in a column

Filter data to display three or more values in a column

Filter data based on vlues in multiple columns

10 Managing charts

Create a chart

Move chart to chart sheet

Add a new data series to a chart

Format a charts legend text

Format a charts axis text

Export a chart as an image

Create a Line sparkline

Create a Column sparkline

Create a Win/Loss sparkline

Delete a sparkline

11 Using built-in functions and statements

Use the built-in Open dialog box

Prevent screen flicker when running VBA code

Table of Contents

- Suppress and rerstore alerts
- Calculate data using Excel worksheet functions
- Display a message box
- Get data from an InputBox
- Display the current date and time
- Format a date
- Remove spaces from the string
- Locate a portion of a string
- Concatenate strings

12 Managing code using logical constructs

- Create a For... Next loop
- Create a For... Each loop
- Create an If... Then statement
- Create a Case statement
- Create a Do loop
- Create a Do... While loop
- Create a Do... Until loop
- Call another macro from within your code
- Refer to objects using a With... End With statement

13 Debugging your VBA code

- Execute code in the Immediate window
- Set a breakpoint in your VBA code
- Watch a value in a routine
- Step through your code one line at a time
- Skip over a subroutine
- Step out of a subroutine
- Manage errors using an On Error GoTo statement

Table of Contents

Manage errors using an On Error Resume Next statement

Manage errors using an On Error GoTo 0 statement

14 Using Excel events in your VBA code

Display the available events

Run a procedure when you open a workbook

Run a procedure when you close a workbook

Run a procedure when you save a workbook

Run a procedure when a cell range changes

15 Gathering data with UserForms

Create a UserForm

Add a TextBox to a UserForm

Add a ListBox to a UserForm

Add a ComboBox to a UserForm

Add an option button to a UserForm

Add graphics to a UserForm

Add a SpinButton to a UserForm

Create a multipage or multitable UserForm

Write UserForm data to a worksheet

Display, load and hide a UserForm

Jargon buster

Troubleshooting guide
