Introduction

Chapter 1. Introducing Windows Communication Foundation

Chapter 1. What Is Windows Communication Foundation?

The Early Days of Personal Computer Applications

Inter-Process Communications Technologies

The Web and Web Services

Using XML as a Common Data Format

Sending and Receiving Web Service Requests

JavaScript Object Notation and Rich Internet Applications

Handling Security and Privacy in a Global Environment

Service-Oriented Architectures and Windows Communication Foundation

Building a WCF Service

Defining the Contracts

Implementing the Service

Configuring and Testing the Service

Building a WCF Client Application

Deploying a WCF Service to Internet Information Services

WCF and the Principles of SOA

Summary

Chapter 2. Hosting a WCF Service

# Table of Contents

## How Does a WCF Service Work?

- Service Endpoints

- Processing a Client Request

## Hosting a WCF Service by Using Windows Process Activation Service

### Hosting a Service in a User Application

- Using the ServiceHost Class

## Building a Windows Presentation Foundation Application to Host a WCF Service

- Reconfiguring the Service to Support Multiple Endpoints

## Understanding Endpoints and Bindings

- The WCF Predefined Bindings

- Configuring Bindings

- Default Endpoints

## Hosting a WCF Service in a Windows Service

### Summary

## Chapter 3. Making Applications and Services Robust

### CLR Exceptions and SOAP Faults

- Throwing and Catching a SOAP Fault

- Using Strongly Typed Faults

- Reporting Unanticipated Exceptions

### Managing Exceptions in Service Host Applications

- ServiceHost States and Transitions

- Handling Faults in a Host Application

- Handling Unexpected Messages in a Host Application

### Summary

## Chapter 4. Protecting an Enterprise WCF Service

### What Is Security?

# Table of Contents

Authentication and Authorization in a Windows Environment

Transport-Level and Message-Level Security

## Implementing Security in a Windows Domain

Protecting a TCP Service at the Message Level

Protecting an HTTP Service at the Transport Level

Protecting an HTTP Service at the Message Level

Authenticating Windows Users

Authorizing Users

Using Impersonation to Access Resources

Summary

## Chapter 5. Protecting a WCF Service over the Internet

### Authenticating Users and Services in an Internet Environment

Authenticating and Authorizing Users by Using the ASP.NET Membership  
Provider and the ASP.NET Role Provider

Authenticating and Authorizing Users by Using Certificates

Authenticating Service Messages by Using a Certificate

Summary

## Chapter 6. Maintaining Service Contracts and Data Contracts

### Modifying a Service Contract

Selectively Protecting Operations

Versioning a Service

Making Breaking and Nonbreaking Changes to a Service Contract

### Modifying a Data Contract

Data Contract and Data Member Attributes

Data Contract Compatibility

Summary

## Chapter 7. Maintaining State and

Managing State in a WCF Service

# Table of Contents

Service Instance Context Modes

Maintaining State with the PerCall Instance Context Mode

Selectively Controlling Service Instance Deactivation

Sequencing Operations in a WCF Service

Maintaining State by Using a Durable Service

Summary

## Chapter 8. Implementing Services by Using Workflows

Building a Simple Workflow Service and Client Application

Implementing a Workflow Service

Implementing a Client Application for a Workflow Service

Handling Faults in a Workflow Service

Hosting a Workflow Service

Hosting a Workflow Service in IIS

Hosting a Workflow Service in a Custom Application

Implementing Common Messaging Patterns in a Workflow Service

Messaging Activities

Correlating Request and Reply Messages in a Workflow Service Instance

Managing Sessions and Maintaining State in a Workflow Service

Building Durable Workflow Services

Summary

## Chapter 9. Supporting Transactions

Using Transactions in a WCF Service

Implementing OLE Transactions

Implementing the WS-AtomicTransaction Protocol

Designing a WCF Service to Support Transactions

Transactions, Sessions, and Service Instance Context Modes

Transactions and Messaging

# Table of Contents

Transactions and Multi-Threading

Implementing Transactions in a Workflow Service

Long-Running Transactions

Summary

## Chapter 10. Implementing Reliable Sessions

Using Reliable Messaging

Implementing Reliable Sessions with WCF

Detecting and Handling Replay Attacks

Configuring Replay Detection with WCF

Summary

## Chapter 11. Programmatically Controlling

The WCF Service Model

Services and Channels

Behaviors

Composing Channels into Bindings

Inspecting Messages

Controlling Client Communications

Connecting to a Service Programmatically

Sending Messages Programmatically

Summary

## Chapter 12. Implementing One-Way and Asynchronous Operations

Implementing One-Way Operations

The Effects of a One-Way Operation

One-Way Operations and Transactions

One-Way Operations and Timeouts

Implementing a One-Way Operation

Recommendations for Using One-Way Operations

# Table of Contents

Invoking and Implementing Operations Asynchronously

    Invoking an Operation Asynchronously in a Client Application

    Implementing an Operation Asynchronously in a WCF Service

Using Message Queues

Summary

## Chapter 13. Implementing a WCF Service for Good Performance

Using Service Throttling to Control Resource Use

    Configuring Service Throttling

    Specifying Memory Requirements

Transmitting Data by Using MTOM

    Sending Large Binary Data Objects to a Client Application

    Controlling the Size of Messages

Streaming Data from a WCF Service

    Enabling Streaming in a WCF Service and Client Application

    Designing Operations to Support Streaming

    Security Implications of Streaming

Summary

## Chapter 14. Discovering Services and Routing Messages

Implementing Discovery

    Configuring Ad Hoc Discovery

    Handling Service Announcements

    Using a Discovery Proxy

Implementing Routing

    Routing Messages Manually

Using the RoutingService Class

Summary

## Chapter 15. Building REST Services

# Table of Contents

Understanding the REST Model

Querying Data by Implementing a REST Web Service

Updating Data Through a REST Web Service

Using WCF Data Services

Consuming a WCF Data Service in a Client Application

Modifying Data by Using a WCF Data Service

Handling Exceptions in a Client Application

Summary

## Chapter 16. Using a Callback Contract to Publish and Subscribe to Events

Implementing and Invoking a Client Callback

Defining a Callback Contract

Implementing an Operation in a Callback Contract

Invoking an Operation in a Callback Contract

Reentrancy and Threading in a Callback Operation

Bindings and Duplex Channels

Using a Callback Contract to Notify a Client of the Outcome of a One-Way Operation

Using a Callback Contract to Implement an Eventing Mechanism

Delivery Models for Publishing and Subscribing

Summary

## Chapter 17. Managing Identity with Windows CardSpace

Using Windows CardSpace to Access a WCF Service

Implementing Claims-Based Security

Using an Identity Provider

Claims-Based Authentication in a Federated Environment

Summary

# Table of Contents

## Chapter 18. Integrating with ASP.NET Clients and Enterprise Services Components

Creating a WCF Service That Supports an ASP.NET Client

Exposing a COM+ Application as a WCF Service

Summary

Index
