Part 1 Introducing Child Development

Chapter 1 Issues in Child Development

Introduction

Defining child development

What is child development?

Terms of development

Stages of development

Domains of development

A history of child development

The beginnings of child development

The scientific study of child development

Cross-cultural contexts of childhood

Principles of child development

Why is the study of child development important?

Optimising childrens development and learning

Adopting a framework to develop personal principles

Applying principles of child development

Key questions and themes in child development

Is development a continuous process or one of stages?

What roles do heredity and training play?

How important are individual differences and situational factors?

Do children play active or passive roles in their own development?

What is the relationship between the different areas of development?

Conclusion

Table of Contents

Summary Table

Going further

Chapter 2 Theories of Child Development

Introduction

The purpose of theory

What is theory?

The evaluation of theories

Theoretical approaches in child development

Learning theories

Cognitive theories

Psychoanalytic theories

Ecological theories

Biological theories

Comparing the five theoretical approaches

Theory into practice

Implications of theory for educators, carers and parents

Alternative new perspectives

Theories of spiritual development

Final thoughts on theory in the study of child development

Conclusion

Summary Table

Going further

Useful websites

Chapter 3 Research Methods

Introduction

Researching children

Studying children in school, day-care and family settings

Research approaches paradigms

Research methods

Experimental methods

Correlation methods

Surveys

Case studies

Reports from narrative

Observations in context

Psychophysical methods

Doing ethical research

Table of Contents

- Research designs
- Cross-cultural research
- Ethical considerations when studying children
- The case for informed practice

Conclusion

Summary Table

Going further

Useful websites

Chapter 4 Nature and Nurture

Introduction

Genetic foundations

- Our unique beginnings
- The genetic code
- Chromosomes and genes
- Using the human genome

Heredity

- Genotypes and phenotypes
- Dominant and recessive genes
- More about X and Y chromosomes
- Behaviour genetics
- Heritability
- Genetic and chromosome abnormalities
- Downs Syndrome

Environmental foundations

- A variety of contexts for development
- Interaction of heredity with the environment
- Twins
- Twin studies
- The scope and types of interaction

Conclusion

Summary Table

Going further

Useful websites

Part 2 Early and Physical Development

Chapter 5 Prenatal Development

Introduction

Conditions for development

Table of Contents

Growth in the womb

The external environment

Threats to development

Maternal diseases

Drugs

Environmental teratogens

Maternal characteristics

Early cognitive development

Prenatal brain development

Foetal behaviour and learning

Conclusion

Summary Table

Going further

Useful websites

Chapter 6 Neonatal Behaviour and Learning

Introduction

Childbirth

The characteristics and capabilities of newborns

Sensory capabilities

Primitive reflexes

Organised activity

Assessing newborns capabilities and states

A post-natal brain built for learning

Cerebral composition

Cerebral processes

Critical periods and brain plasticity

Early learning

Classical conditioning

Operant conditioning

Observational learning

The importance of early experiences

Conclusion

Summary Table

Going further

Useful websites

Chapter 7 The Body and Physical Growth

Introduction

Table of Contents

General physical development

- Physical growth changes in childhood
- Individual and cultural differences
- Three factors influencing physical development
- Childhood obesity

Theories of motor development

- Biological-maturation perspective
- Information-processing perspective
- Ecological perspective dynamic systems theory
- Linking motor and cognitive performance

Motor development viewed as a staged model

- Phases of motor development
- Motor milestones
- The development of gross and fine motor skills
- Implications of physical development on motor performance

Factors influencing motor development

- The importance of play
- The influence of PE and school sport

Conclusion

Summary Table

Going further

Useful websites

Chapter 8 Sensory and Perceptual Development

Introduction

The science of perception

- What is perception and why do we need it?
- Theories of perception
- Researching perception

Making connections

- Connecting sensory and perceptual development
- The sensory perceptions
- Intermodal co-ordination
- Perceptual-motor development

Implications for learning

- Brain Gym

Conclusion

Summary Table

Going further

Table of Contents

Useful websites

Part 3 Cognitive and Social Development

Chapter 9 Cognitive Development

Introduction

Understanding cognition

Three approaches to cognitive development

 Piagets cognitive-developmental theory

 Vygotskys sociocultural theory

 Information-processing theories of cognitive development

 General summary of all three approaches

The nature of intelligence

Measuring intelligence scales and tests

Contemporary theories of intelligence

 Is intelligence genetically determined or influenced by the environment?

 How does intelligence influence academic performance?

 Is intelligence fixed or does it change over time?

Developing intelligence

Giftedness, talent and creativity

 Giftedness

 Talent

 Creativity

Conclusion

Summary Table

Going further

Useful websites

Chapter 10 Language Development

Introduction

What is language and why is it so important?

 Non-verbal communication

 Four components of language

Theories of language acquisition

 Is language innate or learned?

 Language and the maturing brain

The development of language

 The sequence of language development

 When things go wrong with language

Language development different contexts and different forms

Table of Contents

Bilingualism: learning and speaking two languages

Literacy (reading and writing)

The five elements of reading

Conclusion

Summary Table

Going further

Useful websites

Chapter 11 Emotions and Personality

Introduction

Understanding emotions

Theoretical approaches to understanding emotions

Expressing emotions

The development of emotions

Emotional knowledge and understanding the emotions of others

Social referencing

Social cognition

Attachment

Theories of attachment

Early attachment and its consequences

What are the factors that influence attachment?

Judging the quality of attachment

When things go wrong with attachment

Child-care and its influence on attachment

Personality

Children's personalities and the Big Five

Temperament and personality

Linking temperament and social context

Linking temperament and learning styles

Conclusion

Summary Table

Going further

Useful websites

Chapter 12 The Social and Moral World of the Child

Introduction

Human sociability and the need for nexus

The early social world of the child: first relationships

Children's play and social experiences

Self and self-concept

Table of Contents

Self-esteem

Understanding others

Social identity and influence

Theories of social identity

The social influence of the family

The social influence of peers

The social influence of schools and the media

Moral development: right or wrong?

Theories of moral development

Pro- and antisocial behaviours

Promoting prosocial behaviour in schools

Aggressive behaviour in children

Conclusion

Summary Table

Going further
