PEARSON

Principles of Sedimentology and Stratigraphy

Table of Contents

Cover

Table of Contents

Origin and Transport of Sedimentary Materials

1. Weathering and Soils

2. Transport and Deposition of Siliciclastic Sediment

Physical Properties of Sedimentary Rocks

3. Sedimentary Textures

4. Sedimentary Structures

Composition, Classification, and Diagenesis of Sedimentary Rocks

5. Siliciclastic Sedimentary Rocks

6. Carbonate Sedimentary Rocks

7. Other Chemical/Biochemical and Carbonaceous Sedimentary Rocks

Depositional Environments

8. Continental (Terrestrial) Environments

9. Siliciclastic Marine Environments

10. Marginal-Marine Environments

11. Carbonate and Evaporite Environments

Stratigraphy and Basin Analysis

12. Lithostratigraphy

13. Seismic, Sequence, and Magnetic Stratigraphy

14. Biostratigraphy

15. Chronostratigraphy and Geologic Time

16. Basin Analysis, Tectonics, and Sedimentation

Appendix: Form and Roundness of Sedimentary Particles

Appendix: Paleothermometry

Appendix: Nomenclature of Global and Northern American
Chronostratigraphic Units

Table of Contents

Appendix: Web Sites Pertaining to Sedimentology and Stratigraphy
