Third Edition

PEARSON

Physical Chemistry: Pearson New International Edition PDF eBook

Table of Contents

Cover

Table of Contents

1. Fundamental Concepts of Thermodynamics
2. Heat, Work, Internal Energy, Enthalpy, and the First Law of Thermodynamics
3. The Importance of State Functions: Internal Energy and Enthalpy
4. Thermochemistry
5. Entropy and the Second and Third Laws of Thermodynamics
6. Chemical Equilibrium
7. The Properties of Real Gases
8. Phase Diagrams and the Relative Stability of Solids, Liquids, and Gases
9. Ideal and Real Solutions
10. Electrolyte Solutions
11. Electrochemical Cells, Batteries, and Fuel Cells
12. From Classical to Quantum Mechanics
13. The Schrödinger Equation
14. The Quantum Mechanical Postulates
15. Using Quantum Mechanics on Simple Systems
16. The Particle in a Box and the Real World
17. Commuting and Noncommuting Operators and the Surprising
Consequences of Entanglement
18. A Quantum Mechanical Model for the Vibration and Rotation of Molecules
19. The Vibrational and Rotational Spectroscopy of Diatomic Molecules
20. The Hydrogen Atom
21. Many-Electron Atoms
22. Quantum States for Many-Electron Atoms and Atomic Spectroscopy
23. The Chemical Bond in Diatomic Molecules

Table of Contents

- 24. Molecular Structure and Energy Levels for Polyatomic Molecules
- 25. Electronic Spectroscopy
- 26. Computational Chemistry
- 27. Molecular Symmetry
- 28. Nuclear Magnetic Resonance Spectroscopy
- 29. Probability
- 30. The Boltzmann Distribution
- 31. Ensemble and Molecular Partition Functions
- 32. Statistical Thermodynamics
- 33. Kinetic Theory of Gases
- 34. Transport Phenomena
- 35. Elementary Chemical Kinetics
- 36. Values of Selected Physical Constants; SI Prefixes; Greek Alphabet;
Conversion Table for Units
- 37. Masses and Natural Abundances for Selected Isotopes; Periodic Table of
the Elements
- Index
