

The background of the entire cover is a solid teal color. Overlaid on this are numerous thin, white, curved lines that intersect to form a complex, web-like pattern. These lines are most prominent in the top and bottom sections of the cover, framing the central text area.

CLASSICAL MECHANICS

Classical Mechanics

Table of Contents

Cover

Title

Contents

1 Survey of the Elementary Principles

1.1 Mechanics of a Particle

1.2 Mechanics of a System of Particles

1.3 Constraints

1.4 D' Alembert's Principle and Lagrange's Equations

1.5 Velocity-Dependent Potentials and the Dissipation Function

1.6 Simple Applications of the Lagrangian Formulation

2 Variational Principles and Lagrange's Equations

2.1 Hamilton's Principle

2.2 Some Techniques of the Calculus of Variations

2.3 Derivation of Lagrange's Equations from Hamilton's Principle

2.4 Extending Hamilton's Principle to Systems with Constraints

2.5 Advantages of a Variational Principle Formulation

2.6 Conservation Theorems and Symmetry Properties

2.7 Energy Function and the Conservation of Energy

3 The Central Force Problem

3.1 Reduction to the Equivalent One-Body Problem

3.2 The Equations of Motion and First Integrals

3.3 The Equivalent One-Dimensional Problem, and Classification of
Orbits

Table of Contents

3.4 The Virial Theorem

3.5 The Differential Equation for the Orbit, and Integrable Power-Law Potentials

3.6 Conditions for Closed Orbits (Bertrand's Theorem)

3.7 The Kepler Problem: Inverse-Square Law of Force

3.8 The Motion in Time in the Kepler Problem

3.9 The Laplace-Runge-Lenz Vector

3.10 Scattering in a Central Force Field

3.11 Transformation of the Scattering Problem to Laboratory Coordinates

3.12 The Three-Body Problem

4 The Kinematics of Rigid Body Motion

4.1 The Independent Coordinates of a Rigid Body

4.2 Orthogonal Transformations

4.3 Formal Properties of the Transformation Matrix

4.4 The Euler Angles

4.5 The Cayley-Klein Parameters and Related Quantities

4.6 Euler's Theorem on the Motion of a Rigid Body

4.7 Finite Rotations

4.8 Infinitesimal Rotations

4.9 Rate of Change of a Vector

4.10 The Coriolis Effect

5 The Rigid Body Equations of Motion

5.1 Angular Momentum and Kinetic Energy of Motion about a Point

5.2 Tensors

5.3 The Inertia Tensor and the Moment of Inertia

5.4 The Eigenvalues of the Inertia Tensor and the Principal Axis

Table of Contents

Transformation

5.5 Solving Rigid Body Problems and the Euler Equations of Motion

5.6 Torque-free Motion of a Rigid Body

5.7 The Heavy Symmetrical Top with One Point Fixed

5.8 Precession of the Equinoxes and of Satellite Orbits

5.9 Precession of Systems of Charges in a Magnetic Field

6 Oscillations

6.1 Formulation of the Problem

6.2 The Eigenvalue Equation and the Principal Axis Transformation

6.3 Frequencies of Free Vibration, and Normal Coordinates

6.4 Free Vibrations of a Linear Triatomic Molecule

6.5 Forced Vibrations and the Effect of Dissipative Forces

6.6 Beyond Small Oscillations: The Damped Driven Pendulum and the Josephson Junction

7 The Classical Mechanics of the Special Theory of Relativity

7.1 Basic Postulates of the Special Theory

7.2 Lorentz Transformations

7.3 Velocity Addition and Thomas Precession

7.4 Vectors and the Metric Tensor

7.5 1-Forms and Tensors

7.6 Forces in the Special Theory; Electromagnetism

7.7 Relativistic Kinematics of Collisions and Many-Particle Systems

7.8 Relativistic Angular Momentum

7.9 The Lagrangian Formulation of Relativistic Mechanics

7.10 Covariant Lagrangian Formulations

7.11 Introduction to the General Theory of Relativity

8 The Hamilton Equations of Motion

Table of Contents

8.1 Legendre Transformations and the Hamilton Equations of Motion

8.2 Cyclic Coordinates and Conservation Theorems

8.3 Routh's Procedure

8.4 The Hamiltonian Formulation of Relativistic Mechanics

8.5 Derivation of Hamilton's Equations from a Variational Principle

8.6 The Principle of Least Action

9 Canonical Transformations

9.1 The Equations of Canonical Transformation

9.2 Examples of Canonical Transformations

9.3 The Harmonic Oscillator

9.4 The Symplectic Approach to Canonical Transformations

9.5 Poisson Brackets and Other Canonical Invariants

9.6 Equations of Motion, Infinitesimal Canonical Transformations,
and Conservation Theorems in the Poisson Bracket Formulation

9.7 The Angular Momentum Poisson Bracket Relations

9.8 Symmetry Groups of Mechanical Systems

9.9 Liouville's Theorem

10 Hamilton-Jacobi Theory and Action-Angle Variables

10.1 The Hamilton-Jacobi Equation for Hamilton's Principal Function

10.2 The Harmonic Oscillator Problem as an Example of
the Hamilton-Jacobi Method

10.3 The Hamilton-Jacobi Equation for Hamilton's Characteristic Function

10.4 Separation of Variables in the Hamilton-Jacobi Equation

10.5 Ignorable Coordinates and the Kepler Problem

10.6 Action-angle Variables in Systems of One Degree of Freedom

10.7 Action-Angle Variables for Completely Separable Systems

10.8 The Kepler Problem in Action-angle Variables

Table of Contents

11 Classical Chaos

11.1 Periodic Motion

11.2 Perturbations and the Kolmogorov-Arnold-Moser Theorem

11.3 Attractors

11.4 Chaotic Trajectories and Liapunov Exponents

11.5 Poincare Maps

11.6 Henon-Heiles Hamiltonian

11.7 Bifurcations, Driven-damped Harmonic Oscillator, and
Parametric Resonance

11.8 The Logistic Equation

11.9 Fractals and Dimensionality

12 Canonical Perturbation Theory

12.1 Introduction

12.2 Time-dependent Perturbation Theory

12.3 Illustrations of Time-dependent Perturbation Theory

12.4 Time-independent Perturbation Theory

12.5 Adiabatic Invariants

13 Introduction to the Lagrangian and Hamiltonian Formulations for Continuous Systems and Fields

13.1 The Transition from a Discrete to a Continuous System

13.2 The Lagrangian Formulation for Continuous Systems

13.3 The Stress-energy Tensor and Conservation Theorems

13.4 Hamiltonian Formulation

13.5 Relativistic Field Theory

13.6 Examples of Relativistic Field Theories

13.7 Noether's Theorem

Appendix A Euler Angles in Alternate Conventions and

Table of Contents

Cayley-Klein Parameters

Appendix B Groups and Algebras
