Table of Contents

Preface

What's New

Acknowledgments

Chapter 1: Introduction

1.1 Definition of Surveying

1.2 Geomatics

1.3 History of Surveying

1.4 Geodetic and Plane Surveys

1.5 Importance of Surveying

1.6 Specialized Types of Surveys

1.7 Surveying Safety

1.8 Land and Geographic Information Systems

1.9 Federal Surveying and Mapping Agencies

1.10 The Surveying Profession

1.11 Professional Surveying Organizations

1.12 Surveying on the Internet

1.13 Future Challenges in Surveying

Problems

Bibliography

Chapter 2: Units, Significant Figures, and Field Notes

# **Table of Contents**

## **Part I: Units and Significant Figures**

- 2.1 Introduction
- 2.2 Units of Measurement
- 2.3 International System of Units (SI)
- 2.4 Significant Figures
- 2.5 Rounding Off Numbers

## **Part II: Field Notes**

- 2.6 Field Notes
- 2.7 General Requirements of Handwritten Field Notes
- 2.8 Types of Field Books
- 2.9 Kinds of Notes
- 2.10 Arrangements of Notes
- 2.11 Suggestions for Recording Notes
- 2.12 Introduction to Survey Controllers
- 2.13 Transfer of Files from Survey Controllers
- 2.14 Digital Data File Management
- 2.15 Advantages and Disadvantages of Survey Controllers

Problems

Bibliography

## **Chapter 3: Theory of Errors in Observations**

- 3.1 Introduction
- 3.2 Direct and Indirect Observations
- 3.3 Errors in Measurements
- 3.4 Mistakes
- 3.5 Sources of Errors in Making Observations
- 3.6 Types of Errors
- 3.7 Precision and Accuracy
- 3.8 Eliminating Mistakes and Systematic Errors

# **Table of Contents**

- 3.9 Probability
- 3.10 Most Probable Value
- 3.11 Residuals
- 3.12 Occurrence of Random Errors
- 3.13 General Laws of Probability
- 3.14 Measures of Precision
- 3.15 Interpretation of Standard Deviation
- 3.16 The 50, 90, and 95 Percent Errors
- 3.17 Error Propagation
  - 3.17.1 Error of a Sum
  - 3.17.2 Error of a Series
  - 3.17.3 Error of a Products
  - 3.17.4 Error of the Mean
- 3.18 Applications
- 3.19 Conditional Adjustment of Observations
- 3.20 Weights of Observations
- 3.21 Least-Squares Adjustment
- Problems
- Bibliography

## **Chapter 4: Leveling Theory, Methods, and Equipment**

### **Part I: Leveling Theory and Methods**

- 4.1 Introduction
- 4.2 Definitions
- 4.3 North American Vertical Datum
- 4.4 Curvature and Refraction
- 4.5 Methods for Determining Differences in Elevation
  - 4.5.1 Measuring Vertical Distances by Taping or Electronic Methods
  - 4.5.2 Differential Leveling

# **Table of Contents**

4.5.3 Barometric Leveling

4.5.4 Trigonometric Leveling

## **Part II: Equipment for Differential Leveling**

4.6 Categories of Levels

4.7 Telescopes

4.8 Level Vials

4.9 Tilting Levels

4.10 Automatic Levels

4.11 Digital Levels

4.12 Tripods

4.13 Hand Level

4.14 Level Rods

4.15 Testing and Adjusting Levels

4.15.1 Requirements for Testing and Adjusting Instruments

4.15.2 Adjusting for Parallax

4.15.3 Testing and Adjusting Level Vials

4.15.4 Preliminary Adjustment of the Horizontal Cross Hair

4.15.5 Testing and Adjusting the Line of Sight

Problems

Bibliography

## **Chapter 5: LevelingField Procedures and Computations**

5.1 Introduction

5.2 Carrying and Setting Up a Level

5.3 Duties of a Rodperson

5.4 Differential Leveling

5.5 Precision

5.6 Adjustments of Simple Level Circuits

5.7 Reciprocal Leveling

5.8 Three-Wire Leveling

# **Table of Contents**

## **5.9 Profile Leveling**

5.9.1 Staking and Stationing the Reference Line

5.9.2 Field Procedures for Profile Leveling

5.9.3 Drawing and Using the Profile

## **5.10 Grid, Cross-Section, or Borrow-Pit Leveling**

## **5.11 Use of the Hand Level**

## **5.12 Sources of Error in Leveling**

5.12.1 Instrumental Errors

5.12.2 Natural Errors

5.12.3 Personal Errors

## **5.13 Mistakes**

## **5.14 Reducing Errors and Eliminating Mistakes**

## **5.15 Using Software**

Problems

Bibliography

## **Chapter 6: Distance Measurement**

### **Part I: Methods for Measuring Distances**

6.1 Introduction

6.2 Summary of Methods for Making Linear Measurements

6.3 Pacing

6.4 Odometer Readings

6.5 Optical Rangefinders

6.6 Tacheometry

6.7 Subtense Bar

### **Part II: Distance Measurements by Taping**

6.8 Introduction to Taping

6.9 Taping Equipment and Accessories

6.10 Care of Taping Equipment

# **Table of Contents**

## **6.11 Taping on Level Ground**

- 6.11.1 Lining In
- 6.11.2 Applying Tension
- 6.11.3 Plumbing
- 6.11.4 Marking Tape Lengths
- 6.11.5 Reading the Tape
- 6.11.6 Recording the Distance

## **6.12 Horizontal Measurements on Sloping Ground**

## **6.13 Slope Measurements**

## **6.14 Sources of Error in Taping**

- 6.14.1 Incorrect Length of Tape
- 6.14.2 Temperature Other Than Standard
- 6.14.3 Inconsistent Pull
- 6.14.4 Sag
- 6.14.5 Tape Not Horizontal and Tape Off-Line
- 6.14.6 Improper Plumbing
- 6.14.7 Faulty Marking
- 6.14.8 Incorrect Reading or Interpolation
- 6.14.9 Summary of Effects of Taping Errors

## **Part III: Electronic Distance Measurement**

## **6.15 Introduction**

## **6.16 Propagation of Electromagnetic Energy**

## **6.17 Principles of Electronic Distance Measurement**

## **6.18 Electro-Optical Instruments**

## **6.19 Total Station Instruments**

## **6.20 EDM Instruments Without Reflectors**

## **6.21 Computing Horizontal Lengths from Slope Distances**

- 6.21.1 Reduction of Short Lines by Elevation Differences
- 6.21.2 Reduction of Short Lines by Vertical Angles

## **6.22 Errors in Electronic Distance Measurement**

- 6.22.1 Personal Errors
- 6.22.2 Instrumental Errors

# **Table of Contents**

6.22.3 Natural Errors

6.23 Using Software

Problems

Bibliography

## **Chapter 7: Angles, Azimuths, and Bearings**

7.1 Introduction

7.2 Units of Angle Measurement

7.3 Kinds of Horizontal Angles

7.4 Direction of a Line

7.5 Azimuths

7.6 Bearings

7.7 Comparison of Azimuths and Bearings

7.8 Computing Azimuths

7.9 Computing Bearings

7.10 The Compass and the Earth's Magnetic Field

7.11 Magnetic Declination

7.12 Variations in Magnetic Declination

7.13 Software for Determining Magnetic Declination

7.14 Local Attraction

7.15 Typical Magnetic Declination Problems

7.16 Mistakes

Problems

Bibliography

## **Chapter 8: Total Station Instruments; Angle Observations**

Part I: Total Station Instruments

8.1 Introduction

8.2 Characteristics of Total Station Instruments

# **Table of Contents**

- 8.3 Functions Performed by Total Station Instruments
- 8.4 Parts of a Total Station Instrument
- 8.5 Handling and Setting up a Total Station Instrument
- 8.6 Servo-Driven and Remotely Operated Total Station Instruments

## **Part II: Angle Observations**

- 8.7 Relationship of Angles and Distances
- 8.8 Observing Horizontal Angles with Total Station Instruments
- 8.9 Observing Multiple Horizontal Angles by the Direction Method
- 8.10 Closing the Horizon
- 8.11 Observing Deflection Angles
- 8.12 Observing Azimuths
- 8.13 Observing Vertical Angles
- 8.14 Sights and Marks
- 8.15 Prolonging a Straight Line
- 8.16 Balancing-In
- 8.17 Random Traverse
- 8.18 Total Stations for Determining Elevation Differences
- 8.19 Adjustment of Total Station Instruments and Their Accessories
  - 8.19.1 Adjustment of Plate-Level Vials
  - 8.19.2 Adjustment of Tripods
  - 8.19.3 Adjustment of Tribrachs
  - 8.19.4 Adjustment of Plummets
  - 8.19.5 Adjustment of Circular Level Bubbles
- 8.20 Sources of Error in Total Station Work
  - 8.20.1 Instrumental Errors
  - 8.20.2 Natural Errors
  - 8.20.3 Personal Errors
- 8.21 Propagation of Random Errors in Angle Observations
- 8.22 Mistakes

## **Problems**

# **Table of Contents**

Bibliography

## **Chapter 9: Traversing**

9.1 Introduction

9.2 Observation of Traverse Angles or Directions

9.2.1 Traversing by Interior Angles

9.2.2 Traversing by Angles to the Right

9.2.3 Traversing by Deflection Angles

9.2.4 Traversing by Azimuths

9.3 Observation of Traverse Lengths

9.4 Selection of Traverse Stations

9.5 Referencing Traverse Stations

9.6 Traverse Field Notes

9.7 Angle Misclosure

9.8 Traversing with Total Station Instruments

9.9 Radial Traversing

9.10 Sources of Error in Traversing

9.11 Mistakes in Traversing

Problems

## **Chapter 10: Traverse Computations**

10.1 Introduction

10.2 Balancing Angles

10.3 Computation of Preliminary Azimuths or Bearings

10.4 Departures and Latitudes

10.5 Departure and Latitude Closure Conditions

10.6 Traverse Linear Misclosure and Relative Precision

10.7 Traverse Adjustment

10.7.1 Compass (Bowditch) Rule

# **Table of Contents**

10.7.2 Least-Squares Method

10.8 Rectangular Coordinates

10.9 Alternative Methods for Making Traverse Computations

10.9.1 Balancing Angles by Adjusting Azimuths or Bearings

10.9.2 Balancing Departures and Latitudes by Adjusting Coordinates

10.10 Inversing

10.11 Computing Final Adjusted Traverse Lengths and Directions

10.12 Coordinate Computations in Boundary Surveys

10.13 Use of Open Traverses

10.14 State Plane Coordinate Systems

10.15 Traverse Computations Using Computers

10.16 Locating Blunders in Traverse Observations

10.17 Mistakes in Traverse Computations

Problems

Bibliography

## **Chapter 11: Coordinate Geometry in Surveying Calculations**

11.1 Introduction

11.2 Coordinate Forms of Equations for Lines and Circles

11.3 Perpendicular Distance from a Point to a Line

11.4 Intersection of Two Lines, Both Having Known Directions

11.5 Intersection of a Line with a Circle

11.6 Intersection of Two Circles

11.7 Three-Point Resection

11.8 Two-Dimensional Conformal Coordinate Transformation

11.9 Inaccessible Point Problem

11.10 Three-Dimensional Two-Point Resection

11.11 Software

# **Table of Contents**

Problems

Bibliography

## **Chapter 12: Area**

12.1 Introduction

12.2 Methods of Measuring Area

12.3 Area by Division into Simple Figures

12.4 Area by Offsets from Straight Lines

12.4.1 Regularly Spaced Offsets

12.4.2 Irregularly Spaced Offsets

12.5 Area by Coordinates

12.6 Area by Double-Meridian Distance Method

12.7 Area of Parcels with Circular Boundaries

12.8 Partitioning of Lands

12.8.1 Trial and Error Method

12.8.2 Use of Simple Geometric Figures

12.8.3 Coordinate Method

12.9 Area by Measurements from Maps

12.9.1 Area by Counting Coordinate Squares

12.9.2 Area by Scaled Lengths

12.9.3 Area by Digitizing Coordinates

12.9.4 Area by Planimeter

12.10 Software

12.11 Sources of Error in Determining Areas

12.12 Mistakes in Determining Areas

Problems

Bibliography

## **Chapter 13: Global Navigation Satellite SystemsIntroduction and**

# **Table of Contents**

## **Principles of Operation**

### **13.1 Introduction**

### **13.2 Overview of GPS**

### **13.3 The GPS Signal**

### **13.4 Reference Coordinate Systems**

#### **13.4.1 The Satellite Reference Coordinate System**

#### **13.4.2 The Geocentric Coordinate System**

#### **13.4.3 The Geodetic Coordinate System**

#### **13.4.4 Evolution of WGS84 Reference Frame**

### **13.5 Fundamentals of Satellite Positioning**

#### **13.5.1 Code Ranging**

#### **13.5.2 Carrier Phase-Shift Measurements**

### **13.6 Errors in Observations**

#### **13.6.1 Clock Bias**

#### **13.6.2 Refraction**

#### **13.6.3 Other Error Sources**

#### **13.6.4 Geometry of Observed Satellites**

### **13.7 Differential Positioning**

### **13.8 Kinematic Methods**

### **13.9 Relative Positioning**

#### **13.9.1 Single Differencing**

#### **13.9.2 Double Differencing**

#### **13.9.3 Triple Differencing**

### **13.10 Other Satellite Navigation Systems**

#### **13.10.1 The GLONASS Constellation**

#### **13.10.2 The Galileo System**

#### **13.10.3 The BeiDou System**

#### **13.10.4 Summary**

### **13.11 The Future**

# **Table of Contents**

Problems

Bibliography

## **Chapter 14: Global Navigation Satellite Systems Static Surveys**

### **14.1 Introduction**

### **14.2 Field Procedures in Static GNSS Surveys**

14.2.1 Static Relative Positioning

14.2.2 Rapid Static Relative Positioning

14.2.3 Pseudokinematic Surveys

### **14.3 Planning Satellite Surveys**

14.3.1 Preliminary Considerations

14.3.2 Selecting the Appropriate Survey Method

14.3.3 Field Reconnaissance

14.3.4 Developing an Observation Scheme

14.3.5 Availability of Reference Stations

### **14.4 Performing Static Surveys**

### **14.5 Data Processing and Analysis**

14.5.1 Specifications for Static Surveys

14.5.2 Analysis of Fixed Baseline Measurements

14.5.3 Analysis of Repeat Baseline Measurements

14.5.4 Analysis of Loop Closures

14.5.5 Baseline Network Adjustment

14.5.6 The Survey Report

### **14.6 Things to Consider**

### **14.7 Sources of Errors in Satellite Surveys**

14.7.1 Instrumental Errors

14.7.2 Natural Errors

14.7.3 Personal Errors

### **14.8 Mistakes in Satellite Surveys**

# **Table of Contents**

Problems

Bibliography

## **Chapter 15: Global Navigation Satellite System Kinematic Surveys**

15.1 Introduction

15.2 Planning of Kinematic Surveys

15.3 Initialization

15.4 Equipment Used in Kinematic Surveys

15.5 Methods Used in Kinematic Surveys

15.6 Performing Post-Processed Kinematic Surveys

15.7 Communication in Real-Time Kinematic Surveys

15.8 Real-Time Networks

15.9 Performing Real-Time Kinematic Surveys

15.10 Machine Guidance and Control

15.11 Errors in Kinematic Surveys

15.12 Mistakes in Kinematic Surveys

Problems

Bibliography

## **Chapter 16: Adjustments by Least Squares**

16.1 Introduction

16.2 Fundamental Condition of Least Squares

16.3 Least-Squares Adjustment by the Observation Equation Method

16.4 Matrix Methods in Least-Squares Adjustment

16.5 Matrix Equations for Precisions of Adjusted Quantities

16.6 Least-Squares Adjustment of Leveling Circuits

16.7 Propagation of Errors

16.8 Least-Squares Adjustment of GNSS Baseline Vectors

# **Table of Contents**

## 16.9 Least-Squares Adjustment of Conventional Horizontal Plane Surveys

- 16.9.1 Linearizing Nonlinear Equations
- 16.9.2 The Distance Observation Equation
- 16.9.3 The Azimuth Observation Equation
- 16.9.4 The Angle Observation Equation
- 16.9.5 A Traverse Example Using WOLFPACK

## 16.10 The Error Ellipse

## 16.11 Adjustment Procedures

## 16.12 Other Measures of Precision for Horizontal Stations

## 16.13 Software

## 16.14 Conclusions

## Problems

## Bibliography

## Chapter 17: Mapping Surveys

### 17.1 Introduction

### 17.2 Basic Methods for Performing Mapping Surveys

### 17.3 Map Scale

### 17.4 Control for Mapping Surveys

### 17.5 Contours

### 17.6 Characteristics of Contours

### 17.7 Method of Locating Contours

### 17.8 Digital Elevation Models and Automated Contouring Systems

### 17.9 Basic Field Methods for Locating Topographic Details

- 17.9.1 Radiation by Total Station
- 17.9.2 Coordinate Squares or "Grid" Method
- 17.9.3 Offsets from a Reference Line
- 17.9.4 Topographic Detailing with GNSS

# **Table of Contents**

17.9.5 Laser Scanning

17.10 Planning a Laser-Scanning Survey

17.11 Three-Dimensional Conformal Coordinate Transformation

17.12 Selection of Field Method

17.13 Working with Survey Controllers and Field-to-Finish Software

17.14 Hydrographic Surveys

17.14.1 Equipment for Making Soundings

17.14.2 Locating Soundings

17.14.3 Hydrographic Mapping

17.15 Sources of Error in Mapping Surveys

17.16 Mistakes in Mapping Surveys

Problems

Bibliography

## **Chapter 18: Mapping**

18.1 Introduction

18.2 Availability of Maps and Related Information

18.3 National Mapping Program

18.4 Accuracy Standards for Mapping

18.5 Manual and Computer-Aided Drafting Procedures

18.6 Map Design

18.7 Map Layout

18.8 Basic Map Plotting Procedures

18.8.1 Plotting Manually by Coordinates

18.8.2 Plotting Using CADD

18.9 Contour Interval

18.10 Plotting Contours

18.11 Lettering

# **Table of Contents**

18.12 Cartographic Map Elements

18.13 Drafting Materials

18.14 Automated Mapping and Computer-Aided Drafting Systems

18.15 Migrating Maps between Software Packages

18.16 Impacts of Modern Land and Geographic Information Systems on Mapping

18.17 Sources of Error in Mapping

18.18 Mistakes in Mapping

Problems

Bibliography

## **Chapter 19: Control Surveys and Geodetic Reductions**

19.1 Introduction

19.2 The Ellipsoid and Geoid

19.3 The Conventional Terrestrial Pole

19.4 Geodetic Position and Ellipsoidal Radii of Curvature

19.5 Geoid Undulation and Deflection of the Vertical

19.6 U.S. Reference Frames

19.6.1 North American Horizontal Datum of 1927 (NAD27)

19.6.2 North American Horizontal Datum of 1983 (NAD83)

19.6.3 Later Versions of NAD83

19.6.4 National Geodetic Vertical Datum of 1929 (NGVD29)

19.6.5 North American Vertical Datum of 1988 (NAVD88)

19.6.6 Future Reference Frames in the United States

19.7 Transforming Coordinates Between Reference Frames

19.7.1 Helmert Transformation and Its Variant

19.7.2 The Two plus One Approach

19.8 Accuracy Standards and Specifications for Control Surveys

# **Table of Contents**

19.9 The National Spatial Reference System

19.10 Hierarchy of the National Horizontal-Control Network

19.11 Hierarchy of the National Vertical-Control Network

19.12 Control Point Descriptions

19.13 Field Procedures for Conventional Horizontal-Control Surveys

19.13.1 Triangulation

19.13.2 Precise Traverse

19.13.3 Trilateration

19.13.4 Combined Networks

19.14 Field Procedures for Vertical-Control Surveys

19.15 Reduction of Field Observations to Their Geodetic Values

19.15.1 Reduction of Distance Observations Using Elevations

19.15.2 Reduction of Distance Observations Using Vertical Angles

19.15.3 Reduction of Directions and Angles

19.15.4 Leveling and Orthometric Heights

19.16 Geodetic Position Computations

19.16.1 Direct Geodetic Problem

19.16.2 Inverse Geodetic Problem

19.17 The Local Geodetic Coordinate System

19.18 Three-Dimensional Coordinate Computations

19.19 Software

Problems

Bibliography

## **Chapter 20: State Plane Coordinates and Other Map Projections**

20.1 Introduction

20.2 Projections Used In State Plane Coordinate Systems

20.3 Lambert Conformal Conic Projection

# **Table of Contents**

20.4 Transverse Mercator Projection

20.5 State Plane Coordinates in NAD27 and NAD83

20.6 Computing SPCS83 Coordinates in the Lambert Conformal Conic System

20.6.1 Zone Constants

20.6.2 The Direct Problem

20.6.3 The Inverse Problem

20.7 Computing SPCS83 Coordinates in the Transverse Mercator System

20.7.1 Zone Constants

20.7.2 The Direct Problem

20.7.3 The Inverse Problem

20.8 Reduction of Distances and Angles to State Plane Coordinate Grids

20.8.1 Grid Reduction of Distances

20.8.2 Grid Reduction of Azimuths and Angles

20.9 Computing State Plane Coordinates of Traverse Stations

20.10 Surveys Extending from One Zone to Another

20.11 The Universal Transverse Mercator Projection

20.12 Other Map Projections

20.12.1 Oblique Stereographic Map Projection

20.12.2 Oblique Mercator Map Projection

20.13 Map Projection Software

Problems

Bibliography

## **Chapter 21: Boundary Surveys**

21.1 Introduction

21.2 Categories of Land Surveys

# **Table of Contents**

- 21.3 Historical Perspectives
- 21.4 Property Description by Metes and Bounds
- 21.5 Property Description by Block-and-Lot System
- 21.6 Property Description by Coordinates
- 21.7 Retracement Surveys
- 21.8 Subdivision Surveys
- 21.9 Partitioning Land
- 21.10 Registration of Title
- 21.11 Adverse Possession and Easements
- 21.12 Condominium Surveys
- 21.13 Geographic and Land Information Systems
- 21.14 Sources of Error in Boundary Surveys
- 21.15 Mistakes
- Problems
- Bibliography

## **Chapter 22: Surveys of the Public Lands**

- 22.1 Introduction
- 22.2 Instructions for Surveys of the Public Lands
- 22.3 Initial Point
- 22.4 Principal Meridian
- 22.5 Baseline
- 22.6 Standard Parallels (Correction Lines)
- 22.7 Guide Meridians
- 22.8 Township Extérieurs, Meridional (Range) Lines, and Latitudinal  
(Township) Lines
- 22.9 Designation of Townships
- 22.10 Subdivision of a Quadrangle into Townships

# **Table of Contents**

22.11 Subdivision of a Township into Sections

22.12 Subdivision of Sections

22.13 Fractional Sections

22.14 Notes

22.15 Outline of Subdivision Steps

22.16 Marking Corners

22.17 Witness Corners

22.18 Meander Corners

22.19 Lost and Obliterated Corners

22.20 Accuracy of Public Lands Surveys

22.21 Descriptions by Township, Section, and Smaller Subdivision

22.22 BLM Land Information System

22.23 Sources of Error

22.24 Mistakes

Problems

Bibliography

## **Chapter 23: Construction Surveys**

23.1 Introduction

23.2 Specialized Equipment for Construction Surveys

23.2.1 Visible Laser-Beam Instruments

23.2.2 Reflectorless EDMs

23.2.3 Laser Scanners

23.3 Horizontal and Vertical Control

23.4 Staking out a Pipeline

23.5 Staking Pipeline Grades

23.6 Staking out a Building

23.7 Staking out Highways

# **Table of Contents**

23.8 Other Construction Surveys

23.9 Construction Surveys Using Total Station Instruments

23.10 Construction Surveys Using GNSS Equipment

23.11 Machine Guidance and Control

23.12 As-Built Surveys with Laser Scanning

23.13 Sources of Error in Construction Surveys

23.14 Mistakes

Problems

Bibliography

## **Chapter 24: Horizontal Curves**

24.1 Introduction

24.2 Degree of Circular Curve

24.3 Definitions and Derivation of Circular Curve Formulas

24.4 Circular Curve Stationing

24.5 General Procedure of Circular Curve Layout by Deflection Angles

24.6 Computing Deflection Angles and Chords

24.7 Notes for Circular Curve Layout by Deflection Angles and Incremental Chords

24.8 Detailed Procedures for Circular Curve Layout by Deflection Angles and Incremental Chords

24.9 Setups on Curve

24.10 Metric Circular Curves by Deflection Angles and Incremental Chords

24.11 Circular Curve Layout by Deflection Angles and Total Chords

24.12 Computation of Coordinates on a Circular Curve

24.13 Circular Curve Layout by Coordinates

24.14 Curve Stakeout Using GNSS Receivers and Robotic Total

# **Table of Contents**

## Stations

### 24.15 Circular Curve Layout by Offsets

### 24.16 Special Circular Curve Problems

#### 24.16.1 Passing a Circular Curve Through a Fixed Point

#### 24.16.2 Intersection of a Circular Curve and a Straight Line

#### 24.16.3 Intersection of Two Circular Curves

### 24.17 Compound and Reverse Curves

### 24.18 Sight Distance on Horizontal Curves

### 24.19 Spirals

#### 24.19.1 Spiral Geometry

#### 24.19.2 Spiral Calculation and Layout

### 24.20 Computation of "As-Built" Circular Alignments

### 24.21 Sources of Error in Laying out Circular Curves

### 24.22 Mistakes

## Problems

## Bibliography

## Chapter 25: Vertical Curves

### 25.1 Introduction

### 25.2 General Equation of a Vertical Parabolic Curve

### 25.3 Equation of an Equal Tangent Vertical Parabolic Curve

### 25.4 High or Low Point on a Vertical Curve

### 25.5 Vertical Curve Computations Using the Tangent-Offset Equation

#### 25.5.1 Example Computations Using the English System of Units

#### 25.5.2 Example Computations Using the Metric System

### 25.6 Equal Tangent Property of a Parabola

### 25.7 Curve Computations by Proportion

### 25.8 Staking a Vertical Parabolic Curve

# **Table of Contents**

25.9 Machine Control in Grading Operations

25.10 Computations for an Unequal Tangent Vertical Curve

25.11 Designing a Curve to Pass Through a Fixed Point

25.12 Sight Distance

25.13 Sources of Error in Laying out Vertical Curves

25.14 Mistakes

Problems

Bibliography

## **Chapter 26: Volumes**

26.1 Introduction

26.2 Methods of Volume Measurement

26.3 The Cross-Section Method

26.4 Types of Cross-Sections

26.5 Average-End-Area Formula

26.6 Determining End Areas

26.6.1 Calculating End Areas with Simple Figures

26.6.2 Calculating End Areas with Coordinates

26.7 Computing Slope Intercepts

26.8 Prismoidal Formula

26.9 Volume Computations

26.10 Unit-Area, or Borrow-Pit, Method

26.11 Contour-Area Method

26.12 Measuring Volumes of Water Discharge

26.13 Software

26.14 Sources of Error in Determining Volumes

26.15 Mistakes

Problems

# **Table of Contents**

Bibliography

## **Chapter 27: Photogrammetry**

27.1 Introduction

27.2 Uses of Photogrammetry

27.3 Aerial Cameras

27.4 Types of Aerial Photographs

27.5 Vertical Aerial Photographs

27.6 Scale of a Vertical Photograph

27.7 Ground Coordinates from a Single Vertical Photograph

27.8 Relief Displacement on a Vertical Photograph

27.9 Flying Height of a Vertical Photograph

27.10 Stereoscopic Parallax

27.11 Stereoscopic Viewing

27.12 Stereoscopic Measurement of Parallax

27.13 Analytical Photogrammetry

27.14 Stereoscopic Plotting Instruments

27.14.1 Basic Concepts in Stereoplotters

27.14.2 Analytical Stereoplotters

27.14.3 Softcopy Stereoplotters

27.15 Orthophotos

27.16 Ground Control for Photogrammetry

27.17 Flight Planning

27.18 Airborne Laser-Mapping Systems

27.19 Remote Sensing

27.20 Software

27.21 Sources of Error in Photogrammetry

27.22 Mistakes

# **Table of Contents**

Problems

Bibliography

## **Chapter 28: Introduction to Geographic Information Systems**

28.1 Introduction

28.2 Land Information Systems

28.3 GIS Data Sources and Classifications

28.4 Spatial Data

28.4.1 Simple Spatial Objects

28.4.2 Vector and Raster Formats

28.4.3 Topology

28.5 Nonspatial Data

28.6 Data Format Conversions

28.6.1 Vector-to-Raster Conversion

28.6.2 Raster-to-Vector Conversion

28.7 Creating GIS Databases

28.7.1 Generating Digital Data from Field Surveys

28.7.2 Digitizing from Aerial Photos with Stereoplotters

28.7.3 Digitizing Existing Graphic Materials

28.7.4 Keyboard Entry

28.7.5 Existing Digital Data Sets

28.7.6 Scanning

28.8 Metadata

28.9 GIS Analytical Functions

28.9.1 Proximity Analysis

28.9.2 Boundary Operations

28.9.3 Spatial Joins

28.9.4 Logical Operations

28.9.5 Other GIS Functions

# **Table of Contents**

28.10 GIS Applications

28.11 Data Sources

Problems

Bibliography

## **Appendix A: Tape Correction Problems**

A.1 Correcting Systematic Errors in Taping

## **Appendix B: Example Noteforms**

## **Appendix C: Astronomical Observations**

C.1 Introduction

C.2 Overview of Usual Procedures for Astronomical Azimuth  
Determination

C.3 Ephemerides

C.4 Definitions

C.5 Time

C.6 Timing Observations

C.7 Computations for Azimuth from Polaris Observations by the Hour  
Angle Method

C.8 Azimuth from Solar Observations

C.9 Importance of Precise Leveling

## **Appendix D: Using the Worksheets from the Companion Website**

D.1 Introduction

D.2 Using the Files

D.3 Worksheets as an Aid in Learning

## **Appendix E: Introduction to Matrices**

E.1 Introduction

# **Table of Contents**

E.2 Definition of a Matrix

E.3 The Dimensions of a Matrix

E.4 The Transpose of a Matrix

E.5 Matrix Addition

E.6 Matrix Multiplication

E.7 Matrix Inverse

## **Appendix F: U.S. State Plane Coordinate System Defining Parameters**

F.1 Introduction

F.2 Defining Parameters for States Using the Lambert Conformal  
Conic Map Projection

F.3 Defining Parameters for States Using the Transverse Mercator  
Map Projection

## **Appendix G: Answers to Selected Problems**

Index
