College Physics

A Strategic Approach

THIRD EDITION

Randall D. Knight • Brian Jones • Stuart Field

ALWAYS LEARNING

PEARSON

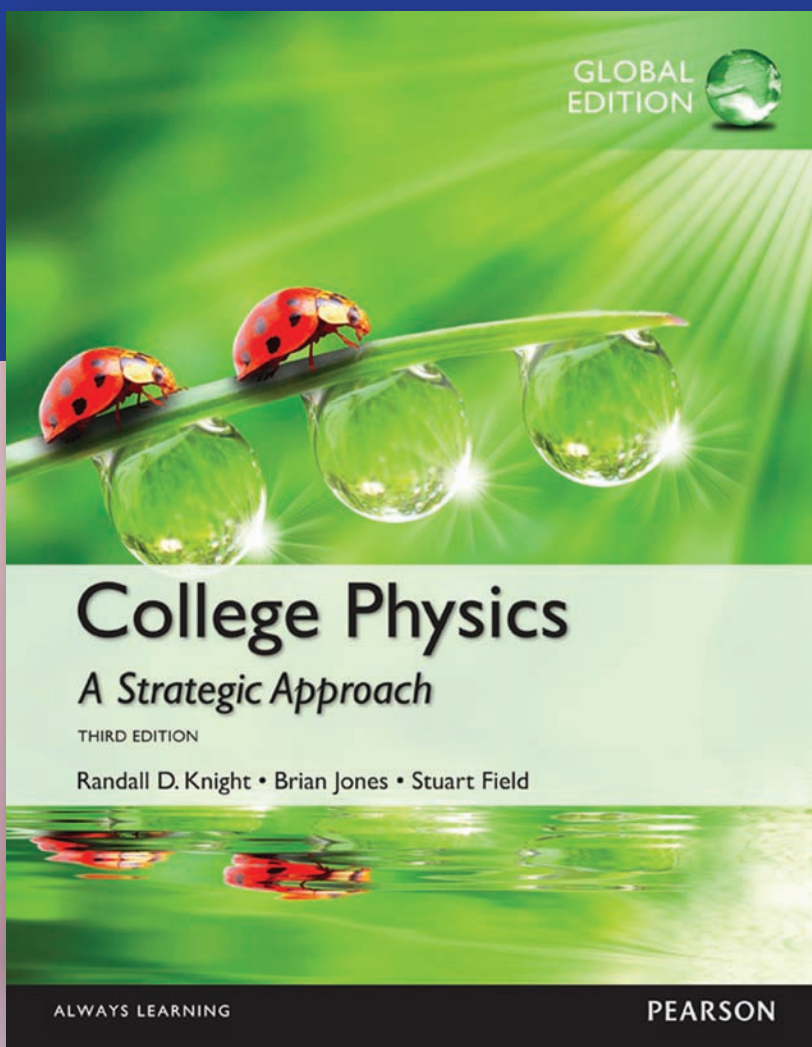

FOCUS ON THE BIG PICTURE

Built from the ground up for optimal learning, and refined to help students focus on the big picture.

Building on the research-proven instructional techniques introduced in Knight's *Physics for Scientists and Engineers, College Physics:*

A Strategic Approach sets a new standard for algebra-based introductory physics—gaining widespread critical acclaim from professors and students alike.

The text, supplements, and MasteringPhysics® work together to help students see and understand the big picture, gain crucial problem-solving skills and confidence, and better prepare for lecture and their future.

Preface to the Instructor

Preface to the Student

Real-World Applications

Part I Force and Motion

OVERVIEW Why Things Change

Chapter 1 Representing Motion

1.1 Motion: A First Look

1.2 Position and Time: Putting Numbers on Nature

1.3 Velocity

1.4 A Sense of Scale: Significant Figures, Scientific Notation, and Units

1.5 Vectors and Motion: A First Look

1.6 Where Do We Go from Here?

Summary

Questions and Problems

Chapter 2 Motion in One Dimension

2.1 Describing Motion

2.2 Uniform Motion

2.3 Instantaneous Velocity

2.4 Acceleration

2.5 Motion with Constant Acceleration

2.6 Solving One-Dimensional Motion Problems

2.7 Free Fall

Summary

Questions and Problems

Chapter 3 Vectors and Motion in Two Dimensions 98

Table of Contents

- 3.1 Using Vectors
- 3.2 Using Vectors on Motion Diagrams
- 3.3 Coordinate Systems and Vector Components
- 3.4 Motion on a Ramp
- 3.5 Relative Motion
- 3.6 Motion in Two Dimensions: Projectile Motion
- 3.7 Projectile Motion: Solving Problems
- 3.8 Motion in Two Dimensions: Circular Motion
- Summary
- Questions and Problems

Chapter 4 Forces and Newtons Laws of Motion

- 4.1 Motion and Forces
- 4.2 A Short Catalog of Forces
- 4.3 Identifying Forces
- 4.4 What Do Forces Do?
- 4.5 Newtons Second Law
- 4.6 Free-Body Diagrams
- 4.7 Newtons Third Law
- Summary
- Questions and Problems

Chapter 5 Applying Newtons Laws

- 5.1 Equilibrium
- 5.2 Dynamics and Newtons Second Law
- 5.3 Mass and Weight
- 5.4 Normal Forces
- 5.5 Friction
- 5.6 Drag
- 5.7 Interacting Objects
- 5.8 Ropes and Pulleys
- Summary
- Questions and Problems

Chapter 6 Circular Motion, Orbits, and Gravity

- 6.1 Uniform Circular Motion
- 6.2 Dynamics of Uniform Circular Motion
- 6.3 Apparent Forces in Circular Motion
- 6.4 Circular Orbits and Weightlessness
- 6.5 Newtons Law of Gravity

Table of Contents

6.6 Gravity and Orbits

Summary

Questions and Problems

Chapter 7 Rotational Motion

7.1 Describing Circular and Rotational Motion

7.2 The Rotation of a Rigid Body

7.3 Torque

7.4 Gravitational Torque and the enter of Gravity

7.5 Rotational Dynamics and Moment of Inertia 240

7.6 Using Newtons Second Law for Rotation

7.7 Rolling Motion

Summary

Questions and Problems

Chapter 8 Equilibrium and Elasticity

8.1 Torque and Static Equilibrium

8.2 Stability and Balance

8.3 Springs and Hookes Law

8.4 Stretching and Compressing Materials

Summary

Questions and Problems

Part I Summary Force and Motion

One Step Beyond Dark Matter and the Structure of the Universe

Part I Problems

Part II Conservation Laws

OVERVIEW Why Some Things Stay the Same

Chapter 9 Momentum

9.1 Impulse

9.2 Momentum and the Impulse-Momentum Theorem

9.3 Solving Impulse and Momentum Problems

9.4 Conservation of Momentum

9.5 Inelastic Collisions

9.6 Momentum and Collisions in Two Dimensions

9.7 Angular Momentum

Summary

Questions and Problems

Chapter 10 Energy and Work

Table of Contents

10.1 The Basic Energy Model
10.2 Work
10.3 Kinetic Energy
10.4 Potential Energy
10.5 Thermal Energy
10.6 Using the Law of Conservation of Energy
10.7 Energy in Collisions
10.8 Power
Summary
Questions and Problems

Chapter 11 Using Energy

11.1 Transforming Energy
11.2 Energy in the Body
11.3 Temperature, Thermal Energy, and Heat
11.4 The First Law of Thermodynamics
11.5 Heat Engines
11.6 Heat Pumps, Refrigerators, and Air Conditioners
11.7 Entropy and the Second Law of Thermodynamics
11.8 Systems, Energy, and Entropy
Summary
Questions and Problems

Part II Summary Conservation Laws

ONE STEP BEYOND Order Out of Chaos

Part II Problems

Part III Properties of Matter

OVERVIEW Beyond the Particle Model

Chapter 12 Thermal Properties of Matter

12.1 The Atomic Model of Matter
12.2 The Atomic Model of an Ideal Gas
12.3 Ideal-Gases Processes
12.4 Thermal Expansion
12.5 Specific Heat and Heat of Transformation
12.6 Calorimetry
12.7 Specific Heats of Gases
12.8 Heat Transfer
Summary

Table of Contents

Questions and Problems

Chapter 13 Fluids

13.1 Fluids and Density

13.2 Pressure

13.3 Measuring and Using Pressure

13.4 Buoyancy

13.5 Fluids in Motion

13.6 Fluid Dynamics

13.7 Viscosity and Poiseuille's Equation

Summary

Questions and Problems

Part III Summary Properties of Matter

ONE STEP BEYOND Size and Life

PART III PROBLEMS

Part IV Oscillations and Waves

OVERVIEW Motion That Repeats Again and Again

Chapter 14 Oscillations

14.1 Equilibrium and Oscillation

14.2 Linear Restoring Forces and Simple Harmonic Motion

14.3 Describing Simple Harmonic Motion

14.4 Energy in Simple Harmonic Motion

14.5 Pendulum Motion

14.6 Damped Oscillations

14.7 Driven Oscillations and Resonance

Summary

Questions and Problems

Chapter 15 Traveling Waves and Sound

15.1 The Wave Model

15.2 Traveling Waves

15.3 Graphical and Mathematical Descriptions of Waves

15.4 Sound and Light Waves

15.5 Energy and Intensity

15.6 Loudness of Sound

15.7 The Doppler Effect and Shock Waves

Summary

Questions and Problems

Table of Contents

Chapter 16 Superposition and Standing Waves

- 16.1 The Principle of Superposition
- 16.2 Standing Waves
- 16.3 Standing Waves on a String
- 16.4 Standing Sound Waves
- 16.5 Speech and Hearing
- 16.6 The Interference of Waves from Two Sources
- 16.7 Beats
- Summary
- Questions and Problems

Part IV Summary Oscillations and Waves

ONE STEP BEYOND Waves in the Earth and the Ocean

PART IV PROBLEMS

Part V Optics

OVERVIEW Light is a Wave

Chapter 17 Wave Optics

- 17.1 What Is Light?
- 17.2 The Interference of Light
- 17.3 The Diffraction Grating
- 17.4 Thin-Film Interference
- 17.5 Single-Slit Diffraction
- 17.6 Circular-Aperture Diffraction
- Summary
- Questions and Problems

Chapter 18 Ray Optics

- 18.1 The Ray Model of Light
- 18.2 Reflection
- 18.3 Refraction
- 18.4 Image Formation by Refraction
- 18.5 Thin Lenses: Ray Tracing
- 18.6 Image Formation with Spherical Mirrors
- 18.7 The Thin-Lens Equation
- Summary
- Questions and Problems

Chapter 19 Optical Instruments

- 19.1 The Camera

Table of Contents

19.2 The Human Eye
19.3 The Magnifier
19.4 The Microscope
19.5 The Telescope
19.6 Color and Dispersion
19.7 Resolution of Optical Instruments
Summary
Questions and Problems

Part V Summary Optics

ONE STEP BEYOND Scanning Confocal Microscopy

PART V PROBLEMS

Part VI Electricity and Magnetism

OVERVIEW Charges, Currents, and Fields

Chapter 20 Electric Fields and Forces

20.1 Charges and Forces
20.2 Charges, Atoms, and Molecules
20.3 Coulombs Law
20.4 The Concept of the Electric Field
20.5 Applications of the Electric Field
20.6 Conductors and Electric Fields
20.7 Forces and Torques in Electric Fields

Summary

Questions and Problems

Chapter 21 Electrical Potential

21.1 Electric Potential Energy and the Electric Potential
21.2 Sources of Electric Potential
21.3 Electric Potential and Conservation of Energy
21.4 Calculating the Electric Potential
21.5 Connecting Potential and Field
21.6 The Electrocardiogram
21.7 Capacitance and Capacitors
21.8 Energy and Capacitors

Summary

Questions and Problems

Chapter 22 Current and Resistance

22.1 A Model of Current

Table of Contents

22.2 Defining and Describing Current
22.3 Batteries and emf
22.4 Connecting Potential and Current
22.5 Ohms Law and Resistor Circuits
22.6 Energy and Power
Summary
Questions and Problems

Chapter 23 Circuits

23.1 Circuit Elements and Diagrams
23.2 Kirchhoffs Laws
23.3 Series and Parallel Circuits
23.4 Measuring Voltage and Current
23.5 More Complex Circuits
23.6 Capacitors in Parallel and Series
23.7 RC Circuits
23.8 Electricity in the Nervous System
Summary
Questions and Problems

Chapter 24 Magnetic Fields and Forces

24.1 Magnetism
24.2 The Magnetic Field
24.3 Electric Currents Also Create Magnetic Fields
24.4 Calculating the Magnetic Field Due to a Current
24.5 Magnetic Fields Exert Forces on Moving Charges
24.6 Magnetic Fields Exert Forces on Currents
24.7 Magnetic Fields Exert Torques on Dipoles
24.8 Magnets and Magnetic Materials
Summary
Questions and Problems

Chapter 25 Electromagnetic Induction and Electromagnetic Waves

25.1 Induced Currents
25.2 Motional emf
25.3 Magnetic Flux
25.4 Faradays Law
25.5 Electromagnetic Waves
25.6 The Photon Model of Electromagnetic Waves
25.7 The Electromagnetic Spectrum

Table of Contents

Summary

Questions and Problems

Chapter 26 AC Electricity

26.1 Alternating Current

26.2 AC Electricity and Transformers

26.3 Household Electricity

26.4 Biological Effects and Electrical Safety

26.5 Capacitor Circuits

26.6 Inductors and Inductor Circuits

26.7 Oscillation Circuits

Summary

Questions and Problems

Part VI Summary Electricity and Magnetism

ONE STEP BEYOND The Greenhouse Effect and Global Warming

PART VI PROBLEMS

Part VII Modern Physics

OVERVIEW New Ways of Looking at the World

Chapter 27 Relativity

27.1 Relativity: Whats It All About?

27.2 Galilean Relativity

27.3 Einsteins Principle of Relativity

27.4 Events and Measurements

27.5 The Relativity of Simultaneity

27.6 Time Dilation

27.7 Length Contraction

27.8 Velocities of Objects in Special Relativity

27.9 Relativistic Momentum

27.10 Relativistic Energy

Summary

Questions and Problems

Chapter 28 Quantum Physics

28.1 X Rays and X-Ray Diffraction

28.2 The Photoelectric Effect

28.3 Photons

28.4 Matter Waves

28.5 Energy Is Quantized

Table of Contents

28.6 Energy Levels and Quantum Jumps
28.7 The Uncertainty Principle
28.8 Applications and Implications of Quantum Theory
Summary
Questions and Problems

Chapter 29 Atoms and Molecules

29.1 Spectroscopy
29.2 Atoms
29.3 Bohrs Model of Atomic Quantization
29.4 The Bohr Hydrogen Atom
29.5 The Quantum-Mechanical Hydrogen Atom
29.6 Multielectron Atoms
29.7 Excited States and Spectra
29.8 Molecules
29.9 Stimulated Emission and Lasers
Summary
Questions and Problems

Chapter 30 Nuclear Physics

30.1 Nuclear Structure
30.2 Nuclear Stability
30.3 Forces and Energy in the Nucleus
30.4 Radiation and Radioactivity
30.5 Nuclear Decay and Half-Lives
30.6 Medical Applications of Nuclear Physics
30.7 The Ultimate Building Blocks of Matter
Summary
Questions and Problems

Part VII Summary Modern Physics

ONE STEP BEYOND The Physics of Very Cold Atoms

PART VII PROBLEMS

Appendix A Mathematics Review

Appendix B Periodic Table of the Elements

Appendix C Video Resources

Appendix D Atomic and Nuclear Data

Answers to Odd-Numbered Problems
