1 Introduction to forensic science

1.1 The role of forensic science in the investigation of crime

1.1.1 The recovery and continuity of evidence

1.1.2 Laboratory work on physical evidence recovered from the crime scene

1.1.3 The interpretation and evaluation of scientific evidence and the presentation of scientific test results in court

1.2 The scientific examination of forensic evidence

1.2.1 The comparison of evidence

1.2.2 Establishing what occurred during a crime: crime reconstruction and simulation experiments

1.2.3 Intelligence information

1.3 The provision of forensic science services in the UK

1.3.1 Scientific support within the police

1.3.2 Large-scale forensic science providers

1.3.3 Small-scale forensic practitioners

1.4 The accreditation of forensic science in the UK

1.4.1 Accreditation of providers

1.4.2 Accreditation of individual practitioners

1.4.3 Course accreditation, endorsement and benchmarking

1.5 Quality assurance in forensic science

Table of Contents

2 The crime scene

Chapter objectives

Introduction

2.1 An overview of crime scene processing

2.2 The first police officer attending and the preservation of the crime scene

2.3 Recording the crime scene

2.3.1 Note-taking at scenes of serious crime

2.3.2 The sketching and virtual reconstruction of scenes of serious crimes

2.3.3 Recording photographic still and video images of scenes of serious crimes

2.3.4 Recording the crime scene using three-dimensional (3-D) imaging systems
an emerging technology

2.4 The recovery of physical evidence

2.5 The recovery of digital evidence

Guest section by Daniel Brearley

2.5.1 An introduction to digital devices and their potential relevance

2.5.2 Overview of a digital forensics investigation

2.5.3 The crime scene in relation to digital evidence

2.5.4 Transportation

2.5.5 Basic triage

2.6 Summary

Problems

Further reading

3 Trace and contact evidence, Part I: Recoverable materials

Chapter objectives

Introduction

3.1 Hairs and other fibres

3.1.1 The recovery of fibre evidence

3.1.2 An overview of the examination and characterisation of hairs and other fibres

3.2 Glass

Table of Contents

3.2.1 Information from patterns of glass fragmentation

3.2.2 Information from glass fragments

3.3 Soils

3.4 Plant material

3.5 Paint

3.6 Others

3.7 A Bayesian approach to the interpretation and evaluation of recoverable trace evidence

3.8 Summary

Problems

Further reading

4 Trace and contact evidence, Part II: Fingerprints and other marks and impressions

Chapter objectives

Introduction

4.1 Fingerprints and fingermarks

4.1.1 The basis of fingerprints as a means of identification

4.1.2 The classification of fingerprints

4.1.3 The comparison and identification of fingerprints

4.1.4 The different types of fingermarks

4.1.5 The development of latent fingermarks

4.2 Footwear impressions

4.2.1 Types of footwear impression, and their detection and recovery

4.2.2 The creation of test impressions and their comparison with scene marks

4.3 Bite marks

4.4 Tool marks

4.5 Tyre marks

4.6 Textile products

4.6.1 Damage to textile fabrics

4.7 Summary

Table of Contents

Problems

Further reading

5 The examination of body fluids, including bloodstain pattern analysis

Chapter objectives

Introduction

5.1 Blood

5.1.1 The composition and function of blood

5.1.2 Presumptive tests for blood

5.1.3 Serological tests for blood

5.2 Bloodstain pattern analysis

5.2.1 Active bloodstains

5.2.2 Passive bloodstains

5.2.3 Transfer bloodstains

5.3 Saliva

5.3.1 The composition and function of saliva

5.3.2 Presumptive test for saliva

5.4 Semen

5.4.1 The composition and function of semen

5.4.2 Tests for semen

5.5 Summary

Problems

Further reading

6 The analysis of deoxyribonucleic acid (DNA): DNA profiling Guest chapter by Harry Mountain

Chapter objectives

Introduction

6.1 The forensic value of DNA profiling

6.1.1 DNA profiles

6.2 DNA, genes and their relationship to individuality

Table of Contents

- 6.2.1 Individuality and genes
- 6.2.2 Genes and DNA
- 6.2.3 The hierarchy of DNA organisation
- 6.2.4 Genetic differences: mutations and alleles
- 6.2.5 DNA sequence variation among individuals
- 6.2.6 Inheritance of alleles
- 6.3 Forensic DNA analysis and DNA profiling**
 - 6.3.1 Collection and storage of DNA samples
 - 6.3.2 Extraction of DNA
 - 6.3.3 The polymerase chain reaction
 - 6.3.4 Measuring the length of DNA molecules: gel electrophoresis
 - 6.3.5 Modern DNA profiling: SGM Plus® and DNA17 systems
 - 6.3.6 The National DNA Database®
- 6.4 Interpretation of DNA profiles**
 - 6.4.1 Single-locus data: simple population genetics
 - 6.4.2 Interpreting full, multiloci DNA profiles
 - 6.4.3 DNA profiling in paternity testing
 - 6.4.4 Familial testing
 - 6.4.5 Quality control and complications in DNA profile data
 - 6.4.6 Y chromosome analysis
 - 6.4.7 Summary
- 6.5 Analysis not involving STRs: single-nucleotide polymorphism analysis**
 - 6.5.1 Analysis of SNPs
 - 6.5.2 Mitochondrial DNA analysis
 - 6.5.3 mtDNA
 - 6.5.4 Applications of mtDNA analysis
- 6.6 Current and future developments**
 - 6.6.1 DNA17 216
 - 6.6.2 Low Copy Number or Low Template DNA and sensitivity
 - 6.6.3 Technical developments
 - 6.6.4 Wider application of DNA profiling
 - 6.6.5 Increasing the number of STR loci analysed

Table of Contents

6.6.6 Interpreting DNA: predicting phenotypic features

6.6.7 DNA databases

6.6.8 Next-generation sequencing

6.7 Summary

Problems

Further reading

7 Forensic toxicology and drugs of abuse

Chapter objectives

Introduction

7.1 Common poisons

7.1.1 Anions

7.1.2 Corrosive poisons

7.1.3 Gaseous and volatile poisons

7.1.4 Metal and metalloid poisons

7.1.5 Pesticides

7.1.6 Toxins

7.2 Drugs of abuse

7.2.1 The legal classification of drugs of abuse within the UK system

7.2.2 Commonly abused drugs

7.3 Factors affecting toxicity

7.4 Routes of uptake and elimination of drugs and other toxic substances

7.5 The analysis of drugs and other poisons

7.5.1 The information sought by analysis

7.5.2 The types of sample that are analysed

7.5.3 Methods of analysis

7.6 Summary

Problems

Further reading

8 Questioned documents

Chapter objectives

Table of Contents

Introduction

8.1 Handwriting investigation

8.1.1 The development of handwriting

8.1.2 The comparison of handwriting

8.2 Signature investigation

8.2.1 Methods of signature forgery

8.2.2 The detection of forged signatures

8.3 Typed, word-processed and photocopied documents

8.3.1 Typed documents

8.3.2 Word-processed documents

8.3.3 Photocopied documents

8.4 Printed documents

8.5 The analysis of handwriting inks

8.5.1 Comparison of inks

8.5.2 Dating of inks

8.6 Paper analysis

8.6.1 Comparison of paper

8.6.2 Dating of paper

8.7 Tears, folds, holes, obliterations, erasures and indentations

8.7.1 Tears

8.7.2 Folds

8.7.3 Holes

8.7.4 Obliterations

8.7.5 Erasures

8.7.6 Indentations

8.8 Summary

Problems

Further reading

9 Firearms

Chapter objectives

Table of Contents

Introduction

9.1 Types of firearm and ammunition

9.2 Internal, external and terminal ballistics

9.3 The examination of suspect firearms

9.3.1 With whom or what has this firearm been in contact?

9.3.2 Could this firearm be responsible for firing the shots that were discharged at a given shooting incident?

9.3.3 Could this firearm have been unintentionally discharged?

9.3.4 Could the intentional discharge of this firearm have caused unintentional injury?

9.3.5 Could this firearm have been used in the commission of an act of suicide?

9.4 The examination of spent cartridge cases, bullets and wads

9.4.1 The examination of spent cartridge cases

9.4.2 The examination of fired bullets

9.4.3 The examination of shotgun plastic cup wads

9.5 Gunshot residues

9.6 Summary

Problems

Further reading

10 Fires

Chapter objectives

Introduction

10.1 The nature of fire

10.2 The behaviour of fire

10.2.1 Fires in rooms and similar compartments

10.2.2 Outdoor fires

10.3 Fire scene investigation

10.3.1 Witnesses and background information

10.3.2 Processing the scene

10.3.3 Finding the seat of a fire

10.3.4 Establishing the cause of a fire

Table of Contents

10.4 The analysis of fire accelerants

10.5 Summary

Problems

Further reading

11 Explosions and explosives

Chapter objectives

Introduction

11.1 The classification of explosions and explosives

11.2 Explosion scene investigation

11.3 The analysis of explosives

11.4 Summary

Problems

Further reading

12 The recovery and forensic examination of human remains

Chapter objectives

Introduction

12.1 The role of the forensic archaeologist in the location, excavation and recovery of human remains

12.1.1 The search for human remains

12.1.2 Excavation of graves and the recovery of human remains

12.2 Early post-mortem changes and the estimation of time of death

12.2.1 Changes in body temperature

12.2.2 Hypostasis

12.2.3 Rigor mortis

12.2.4 Changes in the eyes

12.3 Post-mortem decomposition and related phenomena

12.3.1 The process of post-mortem decomposition

12.3.2 Skeletalisation

12.3.3 Mummification and the formation of adipocere

12.4 The establishment of cause of death

Table of Contents

12.4.1 The circumstances under which deaths are reported by medical practitioners to the coroner

12.4.2 The role of the coroner in the investigation of reported deaths

12.4.3 Post-mortem examination

12.5 The identification of human remains

12.5.1 The identification of non-skeletalised bodies

12.5.2 The identification of skeletalised remains

12.6 Summary

Problems

Further reading

13 Statistics and the analysis, interpretation and evaluation of evidence

Chapter objectives

Introduction

13.1 Data

13.1.1 Types of data

13.1.2 Normally distributed data

13.1.3 Confidence limits and confidence intervals

13.2 Precision, accuracy and error

13.3 Regression analysis

13.4 Hypothesis testing using t-tests

13.5 Parametric and non-parametric tests

13.6 Likelihood ratios and the Bayesian approach

13.6.1 The choice of hypotheses and the hierarchy of propositions

13.6.2 The Case Assessment and Interpretation model

13.6.3 The prosecutors fallacy and the defence attorneys fallacy

13.6.4 The use of the Bayesian approach in jury trials

13.7 Evidential (i.e. judicial) versus intelligence (i.e. investigative) use of forensic science

13.8 Summary

Table of Contents

Problems

Further reading

14 Forensic science in court

Chapter objectives

Introduction

14.1 The criminal court system in England and Wales

14.1.1 The Magistrates Court

14.1.2 The Crown Court

14.1.3 The courts of appeal

14.2 Streamlined Forensic Reporting (SFR) and scientists statements made for court

14.3 The role of the forensic scientist as expert witness

14.4 The interpretation and evaluation of evidence

14.5 Summary

Problems

Further reading

Appendix 1 Sign of elongation and typical birefringence values for man-made fibres

Appendix 2 Values of t

Glossary
