Preface

Contents

1. A Brief History

1.1. Prolegomenon

1.2. In the Beginning

1.3. From the Seventeenth Century

1.4. The Nineteenth Century

1.5. Twentieth-Century Optics

2. Wave Motion

2.1. One-Dimensional Waves

2.2. Harmonic Waves

2.3. Phase and Phase Velocity

2.4. The Superposition Principle

2.5. The Complex Representation

2.6. Phasors and the Addition of Waves

2.7. Plane Waves

2.8. The Three-Dimensional Differential Wave Equation

2.9. Spherical Waves

2.10. Cylindrical Waves

2.11. Twisted Light

Problems

3. Electromagnetic Theory, Photons, and Light

3.1. Basic Laws of Electromagnetic Theory

3.2. Electromagnetic Waves

3.3. Energy and Momentum

Table of Contents

- 3.4. Radiation
- 3.5. Light in Bulk Matter
- 3.6. The Electromagnetic-Photon Spectrum
- 3.7. Quantum Field Theory
- Problems

4. The Propagation of Light

- 4.1. Introduction
- 4.2. Rayleigh Scattering
- 4.3. Reflection
- 4.4. Refraction
- 4.5. Fermats Principle
- 4.6. The Electromagnetic Approach
- 4.7. Total Internal Reflection
- 4.8. Optical Properties of Metals
- 4.9. Familiar Aspects of the Inter action of Light and Matter
- 4.10. The Stokes Treatment of Reflection and Refraction
- 4.11. Photons, Waves, and Probability
- Problems

5. Geometrical Optics

- 5.1. Introductory Remarks
- 5.2. Lenses
- 5.3. Stops
- 5.4. Mirrors
- 5.5. Prisms
- 5.6. Fiberoptics
- 5.7. Optical Systems
- 5.8. Wavefront Shaping
- 5.9. Gravitational Lensing
- Problems

6. More on Geometrical Optics

- 6.1. Thick Lenses and Lens Systems
- 6.2. Analytical Ray Tracing
- 6.3. Aberrations

Table of Contents

6.4. GRIN Systems

6.5. Concluding Remarks

Problems

7. The Superposition of Waves

7.1. The Addition of Waves of the Same Frequency

7.2. The Addition of Waves of Different Frequency

7.3. Anharmonic Periodic Waves

7.4. Nonperiodic Waves

Problems

8. Polarization

8.1. The Nature of Polarized Light

8.2. Polarizers

8.3. Dichroism

8.4. Birefringence

8.5. Scattering and Polarization

8.6. Polarization by Reflection

8.7. Retarders

8.8. Circular Polarizers

8.9. Polarization of Polychromatic Light

8.10. Optical Activity

8.11. Induced Optical EffectsOptical Modulators

8.12. Liquid Crystals

8.13. A Mathematical Description of Polarization

Problems

9. Interference

9.1. General Considerations

9.2. Conditions for Interference

9.3. Wavefront-Splitting Interferometers

9.4. Amplitude-Splitting Interferometers

9.5. Types and Localization of Interference Fringes

9.6. Multiple-Beam Interference

9.7. Applications of Single and Multilayer Films

9.8. Applications of Interferometry

Table of Contents

Problems

10. Diffraction

10.1. Preliminary Considerations

10.2. Fraunhofer Diffraction

10.3. Fresnel Diffraction

10.4. Kirchhoffs Scalar Diffraction Theory

10.5. Boundary Diffraction Waves

Problems

11. Fourier Optics

11.1. Introduction

11.2. Fourier Transforms

11.3. Optical Applications

Problems

12. Basics of Coherence Theory

12.1. Introduction

12.2. Fringes and Coherence

12.3. Visibility

12.4. The Mutual Coherence Function and the Degree of Coherence

12.5. Coherence and Stellar Interferometry

Problems

13. Modern Optics: Lasers and Other Topics

13.1. Lasers and Laserlight

13.2. ImageryThe Spatial Distribution of Optical Information

13.3. Holography

13.4. Nonlinear Optics

Problems

Appendix 1: Electromagnetic Theory

Appendix 2: The Kirchhoff Diffraction Theory

Table 1

Solutions to Selected Problems
