Preface

About the Author

1. Introduction

Reinforced Concrete Structures

Mechanics of Reinforced Concrete

Reinforced Concrete Members

Factors Affecting Choice of Reinforced Concrete for a Structure

Historical Development of Concrete and Reinforced Concrete as Structural
Materials

Building Codes and the ACI Code

References

2. The Design Process

Objectives of Design

The Design Process

Limit States and the Design of Reinforced Concrete

Structural Safety

Probabilistic Calculation of Safety Factors

Design Procedures Specified in the ACI Building Code

Load Factors and Load Combinations in the 2014 ACI Code

Table of Contents

Loadings and Actions

Design for Economy

Sustainability

Customary Dimensions and Construction Tolerances

Inspection

Accuracy of Calculations

Handbooks and Design Aids

References

3. Materials

Concrete

Behavior of Concrete Failing in Compression

Compressive Strength of Concrete

Strength Under Tensile and Multiaxial Loads

Stress-Strain Curves for Concrete

Time-Dependent Volume Changes

High-Strength Concrete

Lightweight Concrete

Fiber Reinforced Concrete

Durability of Concrete

Behavior of Concrete Exposed to High and Low Temperatures

Shotcrete

High-Alumina Cement

Reinforcement

Fiber-Reinforced Polymer (FRP) Reinforcement

Prestressing Steel

References

4. Flexure: Behavior and Nominal Strength of Beam Sections

Introduction

Flexure Theory

Simplifications in Flexure Theory for Design

Table of Contents

Analysis of Nominal Moment Strength for Singly Reinforced Beam
Sections

Definition of Balanced Conditions

Code Definitions of Tension-Controlled and Compression-Controlled
Sections

Beams with Compression Reinforcement

Analysis of Flanged Sections

Unsymmetrical Beam Sections

References

5. Flexural Design of Beam Sections

Introduction

Analysis of Continuous One-Way Floor Systems

Design of Singly Reinforced Beam Sections with Rectangular Compression
Zones

Design of Doubly Reinforced Beam Sections

Design of Continuous One-Way Slabs

References

6. Shear in Beams

Introduction

Basic Theory

Behavior of Beams Failing in Shear

Analysis and Design of Reinforced Concrete Beams for ShearACI Code

Other Shear Design Methods

Hanger Reinforcement

Tapered Beams

Shear in Axially Loaded Members

References

7. Torsion

Introduction and Basic Theory

Behavior of Reinforced Concrete Members Subjected to Torsion

Table of Contents

Thin-Walled Tube Analogies

Design for Torsion and ShearACI Code Approach

ACI Code Design Method for Torsion

References

8. Development, Anchorage, and Splicing of Reinforcement

Introduction

Mechanism of Bond Transfer

Development Length

Hooked Anchorages

Headed and Mechanically Anchored Bars in Tension

Design for Anchorage

Bar Cutoffs and Development of Bars in Flexural Members

Reinforcement Continuity and Structural Integrity Requirements

Splices

References

9. Serviceability

Introduction

Elastic Analysis of Stresses in Beam Sections

Cracking

Deflections of Concrete Beams

Consideration of Deflections in Design

Frame Deflections

Vibrations

Fatigue

References

10. Continuous Beams and One-Way Slabs

Introduction

Continuity in Reinforced Concrete Structures

Continuous Beams

Design of Girders

Table of Contents

Joist Floors

Moment Redistribution

References

11. Columns: Combined Axial Load and Bending

Introduction

Tied and Spiral Columns

Interaction Diagrams

Interaction Diagrams for Reinforced Concrete Columns

Design of Short Columns

Contributions of Steel and Concrete to Column Strength

Biaxially Loaded Columns

References

12. Slender Columns

Introduction

Behavior and Analysis of Pin-Ended Columns

Design of Columns in Nonsway Frames

Behavior of Restrained Columns in Sway Frames

Calculation of Moments in Sway Frames Using Second-Order Analyses

Design of Columns in Sway Frames

General Analysis of Slenderness Effects

Torsional Critical Load

References

13. Two-Way Slabs: Behavior, Analysis, and Design

Introduction

History of Two-Way Slabs

Behavior of Slabs Loaded to Failure in Flexure

Analysis of Moments in Two-Way Slabs

Distribution of Moments in Slabs

Design of Slabs

The Direct-Design Method

Table of Contents

Equivalent-Frame Methods

Use of Computers for an Equivalent-Frame Analysis

Shear Strength of Two-Way Slabs

Combined Shear and Moment Transfer in Two-Way Slabs

Details and Reinforcement Requirements

Design of Slabs Without Beams

Design of Slabs with Beams in Two Directions

Construction Loads on Slabs

Deflections in Two-Way Slab Systems

Use of Post-Tensioning

References

14. Two-Way Slabs: Elastic and Yield-Line Analyses

Review of Elastic Analysis of Slabs

Design Moments from a Finite-Element Analysis

Yield-Line Analysis of Slabs: Introduction

Yield-Line Analysis: Applications for Two-Way Slab Panels

Yield-Line Patterns at Discontinuous Corners

Yield-Line Patterns at Columns or at Concentrated Loads

References

15. Footings

Introduction

Soil Pressure Under Footings

Structural Action of Strip and Spread Footings

Strip or Wall Footings

Spread Footings

Combined Footings

Mat Foundations

Pile Caps

References

16. Shear Friction, Horizontal Shear Transfer, and Composite

Table of Contents

Concrete Beams

Introduction

Shear Friction

Composite Concrete Beams

References

17. Discontinuity Regions and Strut-and-Tie Models

Introduction

Struts

Ties

Nodes and Nodal Zones

Other Strut-and-Tie Elements

Layout of Strut-and-Tie Models

Deep Beams

Continuous Deep Beams

Brackets and Corbels

Dapped Ends

BeamColumn Joints

Bearing Strength

T-Beam Flanges

References

18. Walls and Shear Walls

Introduction

Bearing Walls

Retaining Walls

Tilt-Up Walls

Shear Walls

Lateral Load-Resisting Systems for Buildings

Shear-WallFrame Interaction

Coupled Shear Walls

Design of Structural WallsGeneral

Table of Contents

Flexural Strength of Shear Walls

Shear Strength of Shear Walls

Critical Loads for Axially Loaded Walls

References

19. Design for Earthquake Resistance

Introduction

Seismic Response Spectra

Seismic Design Requirements

Seismic Forces on Structures

Ductility of Reinforced Concrete Members

General ACI Code Provisions for Seismic Design

Beams in Special Moment Frames

Columns in Special Moment Frames

Joints of Special Moment Frames

Structural Diaphragms

Structural Walls

Frame Members Not Proportioned to Resist Forces Induced by Earthquake
Motions

Special Precast Structures

Foundations

References

Appendix A: Design Aids

Appendix B: Notation

Index
