Preface to the third edition

Guided tour

For the student

Acknowledgements

List of abbreviations

The investigative approach

1. Essentials of practical work
2. Health and safety
3. Making measurements
4. SI units and their use
5. Scientific method and design of experiments
6. Making notes of practical work
7. Project work

Fundamental laboratory techniques

8. Working with liquids
9. Basic laboratory procedures I
10. Basic laboratory procedures II
11. Principles of solution chemistry
12. pH and buffer solutions

Laboratory techniques

13. Melting points
14. Recrystallisation
15. Solvent extraction

Table of Contents

- 16. Distillation
- 17. Reflux
- 18. Evaporation
- 19. Inert atmosphere methods
- 20. Combinatorial chemistry

Classical techniques

- 21. Qualitative techniques for inorganic analysis
- 22. Gravimetry
- 23. Molecular formulae
- 24. Procedures in volumetric analysis
- 25. Acidbase titrations
- 26. Complexometric titrations
- 27. Redox titrations
- 28. Precipitation titrations

Instrumental techniques

- 29. Basic spectroscopy
- 30. Atomic spectroscopy
- 31. X-ray fluorescence spectroscopy
- 32. Chromatography
- 33. Electrophoresis
- 34. Electroanalytical techniques
- 35. Using radioisotopes
- 36. Infrared and Raman spectroscopy
- 37. Nuclear magnetic resonance spectrometry
- 38. Mass spectrometry
- 39. X-ray diffraction
- 40. Thermal analysis

Information technology and library resources

- 41. Finding and citing published information
- 42. Evaluating information
- 43. Using online resources
- 44. Internet resources
- 45. Using spreadsheets

Table of Contents

46. Using word processors, databases and other packages

Analysis and presentation of data

47. Fundamental principles of quantitative chemical analysis

48. Calibration and quantitative analysis

49. Using graphs

50. Presenting data in tables

51. Hints for solving numerical problems

52. Manipulating and transforming raw data

53. Descriptive statistics

54. Choosing and using statistical tests

55. Drawing chemical structures

56. Chemometrics

57. Computational chemistry

Study and examination skills

58. The importance of transferable skills

59. Managing your time

60. Working with others

61. Taking notes from lectures and texts

62. Learning effectively

63. Revision strategies

64. Assignments and exams

65. Preparing your curriculum vitae

Communicating information

66. Organising a poster display

67. Giving a spoken presentation

68. General aspects of scientific writing

69. Writing essays

70. Reporting practical and project work

71. Writing literature surveys and reviews

Answers to study exercises

Index
