Preface

Guide tour

For the student

Acknowledgements

Abbreviations

Fundamental approaches to science

1 Essentials of practical work

2 Health and safety

3 Making measurements and observations

4 SI units and their use

5 Scientific method and design of experiments

Fundamental laboratory techniques

6 Working with liquids

7 Basic laboratory procedures

8 Principles of solution chemistry

9 pH and buffer solutions

10 Introduction to microscopy

11 Setting up and using microscopes

12 Sample preparation

13 DNA analysis fundamental principles

Fundamental instrumental techniques

14 Chromatography

15 Mass spectrometry

Table of Contents

- 16 Basic spectroscopy
- 17 Atomic spectroscopy
- 18 X-ray fluorescence spectroscopy
- 19 Infrared and Raman spectroscopy
- 20 Nuclear magnetic resonance spectroscopy
- 21 Immunoassay
- 22 Electrophoresis

The investigative approach to crime scene investigation

- 23 Personnel and recording the scene
- 24 Collecting evidence basic principles
- 25 Digital evidence
- 26 Investigating fingerprints
- 27 Footwear marks and impressions
- 28 Investigating other marks
- 29 Document analysis

Forensic biology

- 30 Analysis of biological fluids
- 31 DNA analysis forensic applications
- 32 Analysis of hair
- 33 Analysis of skeletal remains
- 34 Forensic odontology
- 35 Forensic entomology
- 36 Forensic botany

Forensic chemistry

- 37 Alcohol analysis
- 38 Forensic toxicology
- 39 Bulk drug analysis
- 40 Analysis of paint
- 41 Analysis of glass
- 42 Analysis of fibres
- 43 Firearms and ballistic evidence
- 44 Analysis of fires and explosions

Information technology and library resources

Table of Contents

- 45 Finding and citing published information
- 46 Using online resources
- 47 Evaluating information
- 48 Word processors, databases and other packages
- 49 Using spreadsheets

Analysis and presentation of data

- 50 Fundamental principles of quantitative chemical analysis
- 51 Calibration and quantitative analysis
- 52 Using graphs
- 53 Presenting data in tables
- 54 Hints for solving numerical problems
- 55 Descriptive statistics
- 56 Choosing and using statistical tests
- 57 Chemometrics and advanced statistics

Communicating information

- 58 General aspects of scientific writing
- 59 Giving a spoken presentation
- 60 Writing a forensic statement and presenting evidence in court
- 61 Reporting practical and project work
- 62 Writing essays, literature surveys and reviews
- 63 Organising a poster display

Study and examination skills

- 64 The importance of transferable skills
- 65 Managing your time
- 66 Working with others
- 67 Taking notes from lectures and texts
- 68 Learning and revising effectively
- 69 Assessments and exams
- 70 Preparing your curriculum vitae

Answers to study exercises
