About the Author

Preface

Acknowledgments

Table of Contents

Feature Boxes

1 A Brief History of Microbiology

The Early Years of Microbiology

What Does Life Really Look Like?

How Can Microbes Be Classified?

The Golden Age of Microbiology

Does Microbial Life Spontaneously Generate?

What Causes Fermentation?

What Causes Disease?

How Can We Prevent Infection and Disease?

The Modern Age of Microbiology

What Are the Basic Chemical Reactions of Life?

How Do Genes Work?

What Roles Do Microorganisms Play in the Environment?

How Do We Defend Against Disease?

What Will the Future Hold?

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

2 The Chemistry of Microbiology

Atoms

Atomic Structure

Isotopes

Electron Configurations

Chemical Bonds

Nonpolar Covalent Bonds

Table of Contents

Polar Covalent Bonds

Ionic Bonds

Hydrogen Bonds

Chemical Reactions

Synthesis Reactions

Decomposition Reactions

Exchange Reactions

Water, Acids, Bases, and Salts

Water

Acids and Bases

Salts

Organic Macromolecules

Functional Groups

Lipids

Carbohydrates

Proteins

Nucleotides and Nucleic Acids

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

3 Cell Structure and Function

Processes of Life

Prokaryotic and Eukaryotic Cells: An Overview

External Structures of Bacterial Cells

Glycocalyxes

Flagella

Fimbriae and Pili

Bacterial Cell Walls

Gram-Positive Bacterial Cell Walls

Gram-Negative Bacterial Cell Walls

Bacteria Without Cell Walls

Bacterial Cytoplasmic Membranes

Structure

Function

Cytoplasm of Bacteria

Cytosol

Inclusions

Endospores

Nonmembranous Organelles

Table of Contents

External Structures of Archaea

- Glycocalyces

- Flagella

- Fimbriae and Hami

Archaeal Cell Walls and Cytoplasmic Membranes

Cytoplasm of Archaea

External Structure of Eukaryotic Cells

- Glycocalyces

Eukaryotic Cell Walls and Cytoplasmic Membranes

Cytoplasm of Eukaryotes

- Flagella

- Cilia

- Other Nonmembranous Organelles

- Membranous Organelles

- Endosymbiotic Theory

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

4 Microscopy, Staining, and Classification

Units of Measurement

Microscopy

- General Principles of Microscopy

- Light Microscopy

- Electron Microscopy

- Probe Microscopy

Staining

- Preparing Specimens for Staining

- Principles of Staining

- Simple Stains

- Differential Stains

- Special Stains

- Staining for Electron Microscopy

Classification and Identification of Microorganisms

- Linnaeus and Taxonomic Categories

- Domains

- Taxonomic and Identifying Characteristics

- Taxonomic Keys

Chapter Summary

Questions for Review

Table of Contents

Critical Thinking

Concept Mapping

5 Microbial Metabolism

Basic Chemical Reactions Underlying Metabolism

Catabolism and Anabolism

Oxidation and Reduction Reactions

ATP Production and Energy Storage

The Roles of Enzymes in Metabolism

Carbohydrate Catabolism

Glycolysis

Cellular Respiration

Pentose Phosphate Pathway

Fermentation

Other Catabolic Pathways

Lipid Catabolism

Protein Catabolism

Photosynthesis

Chemicals and Structures

Light-Dependent Reactions

Light-Independent Reactions

Other Anabolic Pathways

Carbohydrate Biosynthesis

Lipid Biosynthesis

Amino Acid Biosynthesis

Nucleotide Biosynthesis

Integration and Regulation of Metabolic Functions

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

6 Microbial Nutrition and Growth

Growth Requirements

Nutrients: Chemical and Energy Requirements

Physical Requirements

Associations and Biofilms

Culturing Microorganisms

Clinical Sampling

Obtaining Pure Cultures

Culture Media

Special Culture Techniques

Table of Contents

Preserving Cultures

Growth of Microbial Populations

Generation Time

Mathematical Considerations in Population Growth

Phases of Microbial Population Growth

Continuous Culture in a Chemostat

Measuring Microbial Reproduction

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

7 Microbial Genetics

The Structure and Replication of Genomes

The Structure of Nucleic Acids

The Structure of Prokaryotic Genomes

The Structure of Eukaryotic Genomes

DNA Replication

Gene Function

The Relationship Between Genotype and Phenotype

The Transfer of Genetic Information

The Events in Transcription

Translation

Regulation of Genetic Expression

Mutations of Genes

Types of Mutations

Effects of Point Mutations

Mutagens

Frequency of Mutation

DNA Repair

Identifying Mutants, Mutagens, and Carcinogens

Genetic Recombination and Transfer

Horizontal Gene Transfer Among Prokaryotes

Transposons and Transposition

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

8 Recombinant DNA Technology

The Role of Recombinant DNA Technology in Biotechnology

Table of Contents

The Tools of Recombinant DNA Technology

- Mutagens
- The Use of Reverse Transcriptase to Synthesize cDNA
- Synthetic Nucleic Acids
- Restriction Enzymes
- Vectors
- Gene Libraries

Techniques of Recombinant DNA Technology

- Multiplying DNA In Vitro: The Polymerase Chain Reaction
- Selecting a Clone of Recombinant Cells
- Separating DNA Molecules: Gel Electrophoresis and the Southern Blot
- DNA Microarrays
- Inserting DNA into Cells

Applications of Recombinant DNA Technology

- Genetic Mapping
- Microbial Community Studies
- Pharmaceutical and Therapeutic Applications
- Agricultural Applications

The Ethics and Safety of Recombinant DNA Technology

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

9 Controlling Microbial Growth in the Environment

Basic Principles of Microbial Control

- Terminology of Microbial Control
- Microbial Death Rates
- Action of Antimicrobial Agents

The Selection of Microbial Control Methods

- Factors Affecting the Efficacy of Antimicrobial Methods
- Biosafety Levels

Physical Methods of Microbial Control

- Heat-Related Methods
- Refrigeration and Freezing
- Desiccation and Lyophilization
- Filtration
- Osmotic Pressure
- Radiation

Chemical Methods of Microbial Control

- Phenol and Phenolics

Table of Contents

- Alcohols
- Halogens
- Oxidizing Agents
- Surfactants
- Heavy Metals
- Aldehydes
- Gaseous Agents
- Enzymes
- Antimicrobial Drugs
- Methods for Evaluating Disinfectants and Antiseptics
- Development of Resistant Microbes

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

10 Controlling Microbial Growth in the Body: Antimicrobial Drugs

The History of Antimicrobial Agents

Mechanisms of Antimicrobial Action

- Inhibition of Cell Wall Synthesis
- Inhibition of Protein Synthesis
- Disruption of Cytoplasmic Membranes
- Inhibition of Metabolic Pathways
- Inhibition of Nucleic Acid Synthesis
- Prevention of Virus Attachment, Entry, or Uncoating

Clinical Considerations in Prescribing Antimicrobial Drugs

- Spectrum of Action
- Effectiveness
- Routes of Administration
- Safety and Side Effects

Resistance to Antimicrobial Drugs

- The Development of Resistance in Populations
- Mechanisms of Resistance
- Multiple Resistance and Cross Resistance
- Retarding Resistance

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

11 Characterizing and Classifying Prokaryotes

General Characteristics of Prokaryotic Organisms

Table of Contents

Morphology of Prokaryotic Cells

Endospores

Reproduction of Prokaryotic Cells

Arrangements of Prokaryotic Cells

Modern Prokaryotic Classification

Survey of Archaea

Extremophiles

Methanogens

Survey of Bacteria

Deeply Branching and Phototrophic Bacteria

Low G + C Gram-Positive Bacteria

High G + C Gram-Positive Bacteria

Gram-Negative Proteobacteria

Other Gram-Negative Bacteria

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

12 Characterizing and Classifying Eukaryotes

General Characteristics of Eukaryotic Organisms

Reproduction of Eukaryotes

Classification of Eukaryotic Organisms

Protozoa

Distribution of Protozoa

Morphology of Protozoa

Nutrition of Protozoa

Reproduction of Protozoa

Classification of Protozoa

Fungi

The Significance of Fungi

Morphology of Fungi

Nutrition of Fungi

Reproduction of Fungi

Classification of Fungi

Lichens

Algae

Distribution of Algae

Morphology of Algae

Reproduction of Algae

Classification of Algae

Table of Contents

Water Molds

Other Eukaryotes of Microbiological Interest: Parasitic Helminths and Vectors

Arachnids

Insects

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

13 Characterizing and Classifying Viruses, Viroids, and Prions

Characteristics of Viruses

Genetic Material of Viruses

Hosts of Viruses

Sizes of Viruses

Capsid Morphology

Viral Shapes

The Viral Envelope

Classification of Viruses

Viral Replication

Lytic Replication of Bacteriophages

Lysogenic Replication of Bacteriophages

Replication of Animal Viruses

The Role of Viruses in Cancer

Culturing Viruses in the Laboratory

Culturing Viruses in Mature Organisms

Culturing Viruses in Embryonated Chicken Eggs

Culturing Viruses in Cell (Tissue) Culture

Are Viruses Alive?

Other Parasitic Particles: Viroids and Prions

Characteristics of Viroids

Characteristics of Prions

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

14 Infection, Infectious Diseases, and Epidemiology

Symbiotic Relationships Between Microbes and Their Hosts

Types of Symbiosis

Normal Microbiota in Hosts

How Normal Microbiota Become Opportunistic Pathogens

Table of Contents

Reservoirs of Infectious Diseases of Humans

- Animal Reservoirs
- Human Carriers
- Nonliving Reservoirs

The Invasion and Establishment of Microbes in Hosts: Infection

- Exposure to Microbes: Contamination and Infection
- Portals of Entry
- The Role of Adhesion in Infection

The Nature of Infectious Disease

- Manifestations of Disease: Symptoms, Signs, and Syndromes
- Causation of Disease: Etiology
- Virulence Factors of Infectious Agents
- The Stages of Infectious Diseases

The Movement of Pathogens Out of Hosts: Portals of Exit

Modes of Infectious Disease Transmission

- Contact Transmission
- Vehicle Transmission
- Vector Transmission

Classification of Infectious Diseases

Epidemiology of Infectious Diseases

- Frequency of Disease
- Epidemiological Studies
- Hospital Epidemiology: Healthcare-Associated (Nosocomial) Infections
- Epidemiology and Public Health

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

15 Innate Immunity

An Overview of the Bodys Defenses

The Bodys First Line of Defense

- The Role of Skin in Innate Immunity
- The Role of Mucous Membranes in Innate Immunity
- The Role of the Lacrimal Apparatus in Innate Immunity
- The Role of Normal Microbiota in Innate Immunity
- Other First-Line Defenses

The Bodys Second Line of Defense

- Defense Components of Blood
- Phagocytosis
- Nonphagocytic Killing

Table of Contents

Nonspecific Chemical Defenses Against Pathogens

Inflammation

Fever

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

16 Adaptive Immunity

Overview of Adaptive Immunity

Elements of Adaptive Immunity

The Tissues and Organs of the Lymphatic System

Antigens

Preparation for an Adaptive Immune Response

T Lymphocytes (T Cells)

B Lymphocytes (B Cells) and Antibodies

Immune Response Cytokines

Cell-Mediated Immune Responses

Activation of Cytotoxic T Cell Clones and Their Functions

The Perforin-Granzyme Cytotoxic Pathway

The CD95 Cytotoxic Pathway

Memory T Cells

T Cell Regulation

Antibody Immune Responses

Inducement of T-Dependent Antibody Immunity with Clonal Selection

Memory Cells and the Establishment of Immunological Memory

Types of Acquired Immunity

Naturally Acquired Active Immunity

Naturally Acquired Passive Immunity

Artificially Acquired Active Immunity

Artificially Acquired Passive Immunotherapy

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

17 Immunization and Immune Testing

Immunization

Brief History of Immunization

Active Immunization

Passive Immunotherapy

Serological Tests That Use Antigens and Corresponding Antibodies

Table of Contents

- Precipitation Tests
- Turbidimetric and Nephelometric Tests
- Agglutination Tests
- Neutralization Tests
- The Complement Fixation Test
- Labeled Antibody Tests
- Point-of-Care Testing

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

18 Immune Disorders

Hypersensitivities

- Type I (Immediate) Hypersensitivity
- Type II (Cytotoxic) Hypersensitivity
- Type III (Immune ComplexMediated) Hypersensitivity
- Type IV (Delayed or Cell-Mediated) Hypersensitivity

Autoimmune Diseases

- Causes of Autoimmune Diseases
- Examples of Autoimmune Diseases

Immunodeficiency Diseases

- Primary Immunodeficiency Diseases
- Acquired Immunodeficiency Diseases

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

19 Pathogenic Gram-Positive Bacteria

Staphylococcus

- Structure and Physiology
- Pathogenicity
- Epidemiology
- Staphylococcal Diseases
- Diagnosis, Treatment, and Prevention

Streptococcus

- Group A Streptococcus: *Streptococcus pyogenes*
- Group B Streptococcus: *Streptococcus agalactiae*
- Other Beta-Hemolytic Streptococci
- Alpha-Hemolytic Streptococci: The Viridans Group
- Streptococcus pneumoniae*

Table of Contents

Enterococcus

- Structure and Physiology
- Pathogenesis, Epidemiology, and Diseases
- Diagnosis, Treatment, and Prevention

Bacillus

- Structure, Physiology, and Pathogenicity
- Epidemiology
- Disease
- Diagnosis, Treatment, and Prevention

Clostridium

- Clostridium perfringens
- Clostridium difficile
- Clostridium botulinum
- Clostridium tetani

Listeria

Mycoplasmas

- Mycoplasma pneumoniae
- Other Mycoplasmas

Corynebacterium

- Pathogenesis, Epidemiology, and Disease
- Diagnosis, Treatment, and Prevention

Mycobacterium

- Tuberculosis
- Leprosy
- Other Mycobacterial Infections

Propionibacterium

Nocardia and Actinomyces

- Nocardia asteroides
- Actinomyces

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

20 Pathogenic Gram-Negative Cocci and Bacilli

Pathogenic Gram-Negative Cocci: Neisseria

- Structure and Physiology of Neisseria
- The Gonococcus: Neisseria gonorrhoeae
- The Meningococcus: Neisseria meningitidis

Pathogenic, Gram-Negative, Facultatively Anaerobic Bacilli

- The Enterobacteriaceae: An Overview

Table of Contents

- Coliform Opportunistic Enterobacteriaceae
- Noncoliform Opportunistic Enterobacteriaceae
- Truly Pathogenic Enterobacteriaceae
- The Pasteurellaceae

Pathogenic, Gram-Negative, Aerobic Bacilli

- Bartonella
- Brucella
- Bordetella
- Burkholderia
- Pseudomonads
- Francisella
- Legionella
- Coxiella

Pathogenic, Gram-Negative, Anaerobic Bacilli

- Bacteroides
- Prevotella

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

21 Rickettsias, Chlamydias, Spirochetes, and Vibrios

Rickettsias

- Rickettsia
- Orientia tsutsugamushi
- Ehrlichia and Anaplasma

Chlamydias

- Chlamydia trachomatis
- Chlamydophila pneumoniae
- Chlamydophila psittaci

Spirochetes

- Treponema
- Borrelia
- Leptospira

Pathogenic Gram-Negative Vibrios

- Vibrio
- Campylobacter jejuni
- Helicobacter pylori

Chapter Summary

Questions for Review

Critical Thinking

Table of Contents

Concept Mapping

22 Pathogenic Fungi

An Overview of Medical Mycology

The Epidemiology of Mycoses

Categories of Fungal Agents: True Fungal Pathogens and Opportunistic Fungi

Clinical Manifestations of Fungal Diseases

The Diagnosis of Fungal Infections

Antifungal Therapies

Antifungal Vaccines

Systemic Mycoses Caused by Pathogenic Fungi

Histoplasmosis

Blastomycosis

Coccidioidomycosis

Paracoccidioidomycosis

Systemic Mycoses Caused by Opportunistic Fungi

Pneumocystis Pneumonia

Candidiasis

Aspergillosis

Cryptococcosis

Zygomycoses

The Emergence of Fungal Opportunists in AIDS Patients

Superficial, Cutaneous, and Subcutaneous Mycoses

Superficial Mycoses

Cutaneous and Subcutaneous Mycoses

Fungal Intoxications and Allergies

Mycotoxicoses

Mushroom Poisoning (Mycetismus)

Allergies to Fungi

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

23 Parasitic Protozoa, Helminths, and Arthropod Vectors

Parasitology

Arthropod Vectors

Protozoan Parasites of Humans

Ciliates

Amoebas

Flagellates

Apicomplexans

Table of Contents

Helminthic Parasites of Humans

- Cestodes
- Trematodes
- Nematodes

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

24 Pathogenic DNA Viruses

Poxviridae

- Smallpox
- Molluscum Contagiosum
- Other Poxvirus Infections

Herpesviridae

- Infections of Human Herpesvirus 1 and 2
- Human Herpesvirus 3 (Varicella-Zoster Virus) Infections
- Human Herpesvirus 4 (Epstein-Barr Virus) Infections
- Human Herpesvirus 5 (Cytomegalovirus) Infections
- Other Herpesvirus Infections

Papillomaviridae and Polyomaviridae

- Papillomavirus Infections
- Polyomavirus Infections

Adenoviridae

Hepadnaviridae

- Hepatitis B Infections
- The Role of Hepatitis B Virus in Hepatic Cancer

Parvoviridae

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

25 Pathogenic RNA Viruses

Naked, Positive ssRNA Viruses: Picornaviridae, Caliciviridae, Astroviridae, and Hepeviridae

- Common Colds Caused by Rhinoviruses
- Diseases of Enteroviruses
- Hepatitis A
- Acute Gastroenteritis
- Hepatitis E

Enveloped, Positive ssRNA Viruses: Togaviridae, Flaviviridae, and Coronaviridae

Table of Contents

Diseases of +RNA Arboviruses

Other Diseases of Enveloped +ssRNA Viruses

Enveloped, Positive ssRNA Viruses with Reverse Transcriptase: Retroviridae

Oncogenic Retroviruses (Deltaretrovirus)

Immunosuppressive Retroviruses (Lentivirus) and Acquired Immunodeficiency Syndrome

Enveloped, Unsegmented, Negative ssRNA Viruses: Paramyxoviridae, Rhabdoviridae, and Filoviridae

Measles

Diseases of Parainfluenza Virus

Mumps

Disease of Respiratory Syncytial Virus

Rabies

Hemorrhagic Fevers

Enveloped, Segmented, Negative ssRNA Viruses: Orthomyxoviridae, Bunyaviridae, and Arenaviridae

Influenza

Diseases of Bunyaviruses

Diseases of Arenaviruses

Naked, Segmented dsRNA Viruses: Reoviridae

Rotavirus Infections

Coltivirus Infections

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

26 Applied and Environmental Microbiology

Food Microbiology

The Roles of Microorganisms in Food Production

The Causes and Prevention of Food Spoilage

Foodborne Illnesses

Industrial Microbiology

The Roles of Microbes in Industrial Fermentations

Industrial Products of Microorganisms

Water Treatment

Environmental Microbiology

Microbial Ecology

Bioremediation

The Problem of Acid Mine Drainage

The Roles of Microorganisms in Biogeochemical Cycles

Soil Microbiology

Aquatic Microbiology

Biological Warfare and Bioterrorism

Table of Contents

Assessing Microorganisms as Potential Agents of Warfare or Terror

Known Microbial Threats

Defense Against Bioterrorism

The Roles of Recombinant Genetic Technology in Bioterrorism

Chapter Summary

Questions for Review

Critical Thinking

Concept Mapping

Answers to Questions for Review
