Preface

Chapter 1 Properties of Fluids 17

1.1 Introduction 17

1.1.1 Nomenclature 19

1.1.2 Dimensions and Units 20

1.1.3 Basic Concepts of Fluid Flow 26

1.2 Density 27

1.3 Compressibility 32

1.4 Ideal Gases 36

1.4.1 Equation of State 36

1.4.2 Mixtures of Ideal Gases 37

1.4.3 Thermodynamic Properties 39

1.4.4 Speed of Sound in an Ideal Gas 44

1.5 Standard Atmosphere 44

1.6 Viscosity 46

1.6.1 Newtonian Fluids 46

1.6.2 Non-Newtonian Fluids 53

1.7 Surface Tension 55

1.8 Vapor Pressure 61

1.8.1 Evaporation, Transpiration, and Relative Humidity 63

1.8.2 Cavitation and Boiling 64

1.9 Thermodynamic Properties of Liquids 67

1.9.1 Specific Heat 67

Table of Contents

1.9.2 Latent Heat	68
1.10 Summary of Properties of Water and Air	69
Key Equations in Properties of Fluids	70
Problems	72
Chapter 2 Fluid Statics	87
2.1 Introduction	87
2.2 Pressure Distribution in Static Fluids	88
2.2.1 Characteristics of Pressure	88
2.2.2 Spatial Variation in Pressure	89
2.2.3 Practical Applications	92
2.3 Pressure Measurements	101
2.3.1 Barometer	101
2.3.2 Bourdon Gauge	103
2.3.3 Pressure Transducer	104
2.3.4 Manometer	105
2.4 Forces on Plane Surfaces	110
2.5 Forces on Curved Surfaces	120
2.6 Buoyancy	127
2.6.1 Fully Submerged Bodies	127
2.6.2 Partially Submerged Bodies	132
2.6.3 Buoyancy Effects Within Fluids	138
2.7 Rigid-Body Motion of Fluids	139
2.7.1 Liquid with Constant Acceleration	141
2.7.2 Liquid in a Rotating Container	145
Key Equations in Fluid Statics	148
Problems	150
Chapter 3 Kinematics and Streamline Dynamics	177
3.1 Introduction	177
3.2 Kinematics	178
3.2.1 Tracking the Movement of Fluid Particles	181
3.2.2 The Material Derivative	188

Table of Contents

3.2.3 Flow Rates	190
3.3 Dynamics of Flow along a Streamline	192
3.4 Applications of the Bernoulli Equation	202
3.4.1 Flow through Orifices	203
3.4.2 Flow Measurement	209
3.4.3 Trajectory of a Liquid Jet	214
3.4.4 Compressibility Effects	216
3.4.5 Viscous Effects	218
3.4.6 Branching Conduits	220
3.5 Curved Flows and Vortices	222
3.5.1 Forced Vortices	223
3.5.2 Free Vortices	226
Key Equations in Kinematics and Streamline Dynamics	229
Problems	232
Chapter 4 Finite Control Volume Analysis	256
4.1 Introduction	256
4.2 Reynolds Transport Theorem	257
4.3 Conservation of Mass	259
4.3.1 Closed Conduits	263
4.3.2 Free Discharges from Reservoirs	265
4.3.3 Moving Control Volumes	267
4.4 Conservation of Linear Momentum	268
4.4.1 General Momentum Equations	269
4.4.2 Forces on Pressure Conduits	273
4.4.3 Forces on Deflectors and Blades	281
4.4.4 Forces on Moving Control Volumes	282
4.4.5 Wind Turbines	288
4.4.6 Reaction of a Jet	293
4.4.7 Jet Engines and Rockets	296
4.5 Angular Momentum Principle	298
4.6 Conservation of Energy	307
4.6.1 The First Law of Thermodynamics	308

Table of Contents

4.6.2 Steady-State Energy Equation 309

4.6.3 Unsteady-State Energy Equation 320

Key Equations in Finite Control Volume Analysis 323

Problems 327

Chapter 5 Differential Analysis 357

5.1 Introduction 357

5.2 Kinematics 358

5.2.1 Translation 358

5.2.2 Rotation 360

5.2.3 Angular Deformation 363

5.2.4 Linear Deformation 363

5.3 Conservation of Mass 365

5.3.1 Continuity Equation 365

5.3.2 The Stream Function 372

5.4 Conservation of Momentum 375

5.4.1 General Equation 376

5.4.2 NavierStokes Equation 379

5.4.3 Nondimensional NavierStokes Equation 381

5.5 Solutions of the NavierStokes Equation 385

5.5.1 Steady Laminar Flow Between Stationary Parallel Plates 385

5.5.2 Steady Laminar Flow Between Moving Parallel Plates 388

5.5.3 Steady Laminar Flow Adjacent to Moving Vertical Plate 391

5.5.4 Steady Laminar Flow Through a Circular Tube 394

5.5.5 Steady Laminar Flow Through an Annulus 396

5.5.6 Steady Laminar Flow Between Rotating Cylinders 399

5.6 Inviscid Flow 402

5.6.1 Bernoulli Equation for Steady Inviscid Flow 404

5.6.2 Bernoulli Equation for Steady Irrotational Inviscid Flow 407

5.6.3 Velocity Potential 409

5.6.4 Two-Dimensional Potential Flows 411

5.7 Fundamental and Composite Potential Flows 415

5.7.1 Principle of Superposition 415

Table of Contents

- 5.7.2 Uniform Flow 417
- 5.7.3 Line Source/Sink Flow 418
- 5.7.4 Line Vortex Flow 421
- 5.7.5 Spiral Flow Toward a Sink 424
- 5.7.6 Doublet Flow 426
- 5.7.7 Flow Around a Half-Body 428
- 5.7.8 Rankine Oval 433
- 5.7.9 Flow Around a Circular Cylinder 437

5.8 Turbulent Flow 441

- 5.8.1 Occurrence of Turbulence 443
- 5.8.2 Turbulent Shear Stress 443
- 5.8.3 Mean Steady Turbulent Flow 445

5.9 Conservation of Energy 446

Key Equations in Differential Analysis of Fluid Flows 449

Problems 455

Chapter 6 Dimensional Analysis and Similitude 477

6.1 Introduction 477

6.2 Dimensions in Equations 477

6.3 Dimensional Analysis 481

- 6.3.1 Conventional Method of Repeating Variables 483
- 6.3.2 Alternative Method of Repeating Variables 486
- 6.3.3 Method of Inspection 487

6.4 Dimensionless Groups as Force Ratios 488

6.5 Dimensionless Groups in Other Applications 493

6.6 Modeling and Similitude 494

Key Equations for Dimensional Analysis and Similitude 506

Problems 507

Chapter 7 Flow in Closed Conduits 525

7.1 Introduction 525

7.2 Steady Incompressible Flow 526

7.3 Friction Effects in Laminar Flow 532

Table of Contents

7.4 Friction Effects in Turbulent Flow 536

7.5 Practical Applications 544

7.5.1 Estimation of Pressure Changes 544

7.5.2 Estimation of Flow Rate for a Given Head Loss 546

7.5.3 Estimation of Diameter for a Given Flow Rate and Head Loss 547

7.5.4 Head Losses in Noncircular Conduits 548

7.5.5 Empirical Friction Loss Formulas 549

7.5.6 Local Head Losses 552

7.5.7 Pipelines with Pumps or Turbines 559

7.6 Water Hammer 560

7.7 Pipe Networks 565

7.7.1 Nodal Method 566

7.7.2 Loop Method 568

7.8 Building Water Supply Systems 573

7.8.1 Specification of Design Flows 574

7.8.2 Specification of Minimum Pressures 574

7.8.3 Determination of Pipe Diameters 576

Key Equations for Flow in Closed Conduits 583

Problems 587

Chapter 8 Turbomachines 608

8.1 Introduction 608

8.2 Mechanics of Turbomachines 609

8.3 Hydraulic Pumps and Pumped Systems 614

8.3.1 Flow Through Centrifugal Pumps 616

8.3.2 Efficiency 621

8.3.3 Dimensional Analysis 622

8.3.4 Specific Speed 626

8.3.5 Performance Curves 630

8.3.6 System Characteristics 632

8.3.7 Limits on Pump Location 635

8.3.8 Multiple Pump Systems 640

8.3.9 Variable-Speed Pumps 642

Table of Contents

8.4 Fans 644

8.4.1 Performance Characteristics of Fans 644

8.4.2 Affinity Laws of Fans 645

8.4.3 Specific Speed 646

8.5 Hydraulic Turbines and Hydropower 648

8.5.1 Impulse Turbines 648

8.5.2 Reaction Turbines 654

8.5.3 Practical Considerations 658

Key Equations for Turbomachines 664

Problems 668

Chapter 9 Flow in Open Channels 693

9.1 Introduction 693

9.2 Basic Principles 694

9.2.1 Steady-State Continuity Equation 694

9.2.2 Steady-State Momentum Equation 694

9.2.3 Steady-State Energy Equation 711

9.3 Water Surface Profiles 724

9.3.1 Profile Equation 724

9.3.2 Classification of Water Surface Profiles 725

9.3.3 Hydraulic Jump 731

9.3.4 Computation of Water Surface Profiles 737

Key Equations in Open-Channel Flow 746

Problems 749

Chapter 10 Drag and Lift 759

10.1 Introduction 759

10.2 Fundamentals 760

10.2.1 Friction and Pressure Drag 762

10.2.2 Drag and Lift Coefficients 762

10.2.3 Flow over Flat Surfaces 765

10.2.4 Flow over Curved Surfaces 767

10.3 Estimation of Drag Coefficients 770

Table of Contents

- 10.3.1 Drag on Flat Surfaces 770
- 10.3.2 Drag on Spheres and Cylinders 774
- 10.3.3 Drag on Vehicles 781
- 10.3.4 Drag on Ships 784
- 10.3.5 Drag on Two-Dimensional Bodies 785
- 10.3.6 Drag on Three-Dimensional Bodies 786
- 10.3.7 Drag on Composite Bodies 786
- 10.3.8 Drag on Miscellaneous Bodies 789
- 10.3.9 Added Mass 790

10.4 Estimation of Lift Coefficients 791

- 10.4.1 Lift on Airfoils 791
- 10.4.2 Lift on Airplanes 794
- 10.4.3 Lift on Hydrofoils 799
- 10.4.4 Lift on a Spinning Sphere in Uniform Flow 800

Key Equations for Drag and Lift 803

Problems 806

Chapter 11 Boundary-Layer Flow 827

11.1 Introduction 827

11.2 Laminar Boundary Layers 829

- 11.2.1 Blasius Solution for Plane Surfaces 829
- 11.2.2 Blasius Equations for Curved Surfaces 834

11.3 Turbulent Boundary Layers 836

- 11.3.1 Analytic Formulation 836
- 11.3.2 Turbulent Boundary Layer on a Flat Surface 837
- 11.3.3 Boundary-Layer Thickness and Shear Stress 844

11.4 Applications 845

- 11.4.1 Displacement Thickness 845
- 11.4.2 Momentum Thickness 849
- 11.4.3 Momentum Integral Equation 850
- 11.4.4 General Formulations for Self-Similar Velocity Profiles 854

11.5 Mixing-Length Theory of Turbulent Boundary Layers 856

- 11.5.1 Smooth Flow 856

Table of Contents

11.5.2 Rough Flow 857

11.5.3 Velocity-Defect Law 858

11.5.4 One-Seventh Power Law Distribution 859

11.6 Boundary Layers in Closed Conduits 859

11.6.1 Smooth Flow in Pipes 860

11.6.2 Rough Flow in Pipes 861

11.6.3 Notable Contributors to Understanding Flow in Pipes 862

Key Equations for Boundary-Layer Flow 863

Problems 867

Chapter 12 Compressible Flow 884

12.1 Introduction 884

12.2 Principles of Thermodynamics 885

12.3 The Speed of Sound 891

12.4 Thermodynamic Reference Conditions 898

12.4.1 Isentropic Stagnation Condition 898

12.4.2 Isentropic Critical Condition 903

12.5 Basic Equations of One-Dimensional Compressible Flow 905

12.6 Steady One-Dimensional Isentropic Flow 907

12.6.1 Effect of Area Variation 907

12.6.2 Choked Condition 908

12.6.3 Flow in Nozzles and Diffusers 910

12.7 Normal Shocks 923

12.8 Steady One-Dimensional Non-Isentropic Flow 935

12.8.1 Adiabatic Flow with Friction 936

12.8.2 Isothermal Flow with Friction 949

12.8.3 Diabatic Frictionless Flow 951

12.8.4 Application of Fanno and Rayleigh Relations to Normal Shocks 957

12.9 Oblique Shocks, Bow Shocks, and Expansion Waves 962

12.9.1 Oblique Shocks 962

12.9.2 Bow Shocks and Detached Shocks 970

12.9.3 Isentropic Expansion Waves 972

Key Equations in Compressible Flow 977

Table of Contents

Problems	984
Appendix A Units and Conversion Factors	999
A.1 Units	999
A.2 Conversion Factors	1000
Appendix B Fluid Properties	1003
B.1 Water	1003
B.2 Air	1004
B.3 The Standard Atmosphere	1005
B.4 Common Liquids	1006
B.5 Common Gases	1007
B.6 Nitrogen	1008
Appendix C Properties of Areas and Volumes	1009
C.1 Areas	1009
C.2 Properties of Circles and Spheres	1011
C.2.1 Circles	1011
C.2.2 Spheres	1012
C.3 Volumes	1012
Appendix D Pipe Specifications	1013
D.1 PVC Pipe	1013
D.2 Ductile Iron Pipe	1014
D.3 Concrete Pipe	1014
D.4 Physical Properties of Common Pipe Materials	1014
Bibliography	1015
Index	1026
