Chapter 1 What is Operations Research?

1.1 Introduction

1.2 Operations Research Models

1.3 Solving the OR Model

1.4 Queuing and Simulation Models

1.5 Art of Modeling

1.6 More than Just Mathematics

1.7 Phases of an OR Study

1.8 About this Book

Bibliography

Problems

Chapter 2 Modeling with Linear Programming

Table of Contents

2.1 Two-Variable LP Model

2.2 Graphical LP Solution

2.2.1 Solution of a Maximization Model

2.2.2 Solution of a Minimization Model

2.3 Computer Solution with Solver and AMPL

2.3.1 LP Solution with Excel Solver

2.3.2 LP Solution with AMPL

2.4 Linear Programming Applications

2.4.1 Investment

2.4.2 Production Planning and Inventory Control

2.4.3 Workforce Planning

2.4.4 Urban Development Planning

2.4.5 Blending and Refining

2.4.6 Additional LP Applications

Bibliography

Problems

Chapter 3 The Simplex Method and Sensitivity Analysis

3.1 LP Model in Equation Form

3.2 Transition from Graphical to Algebraic Solution

3.3 The Simplex Method

3.3.1 Iterative Nature of the Simplex Method

3.3.2 Computational Details of the Simplex Algorithm

3.3.3 Summary of the Simplex Method

3.4 Artificial Starting Solution

3.4.1 M-Method

3.4.2 Two-Phase Method

3.5 Special Cases in the Simplex Method

3.5.1 Degeneracy

Table of Contents

3.5.2 Alternative Optima

3.5.3 Unbounded Solution

3.5.4 Infeasible Solution

3.6 Sensitivity Analysis

3.6.1 Graphical Sensitivity Analysis

3.6.2 Algebraic Sensitivity Analysis Changes in the Right-Hand Side

3.6.3 Algebraic Sensitivity Analysis Objective Function

3.6.4 Sensitivity Analysis With Tora, Solver, and AMPL

3.7 Computational Issues In Linear Programming

3.7 Computational Issues In Linear Programming 13

3.7 Computational Issues In Linear Programming 13

Bibliography

Problems

Chapter 4 Duality and Post-Optimal Analysis

4.1 Definition of the Dual Problem

4.2 PrimalDual Relationships

4.2.1 Review of Simple Matrix Operations

4.2.2 Simplex Tableau Layout

4.2.3 Optimal Dual Solution

4.2.4 Simplex Tableau Computations

4.3 Economic Interpretation of Duality

4.3.1 Economic Interpretation of Dual Variables

4.3.2 Economic Interpretation of Dual Constraints

4.4 Additional Simplex Algorithms

4.4.1 Dual Simplex Algorithm

4.4.2 Generalized Simplex Algorithm

4.5 Post-Optimal Analysis

4.5.1 Changes Affecting Feasibility

Table of Contents

4.5.2 Changes Affecting Optimality

Bibliography

Problems

Chapter 5 Transportation Model and Its Variants

5.1 Definition of the Transportation Model

5.2 Nontraditional Transportation Models

5.3 The Transportation Algorithm

5.3.1 Determination of the Starting Solution

5.3.2 Iterative Computations of the Transportation Algorithm

5.3.3 Simplex Method Explanation of the Method of Multipliers

5.4 The Assignment Model

5.4.1 The Hungarian Method

5.4.2 Simplex Explanation of the Hungarian Method

Bibliography

Problems

Chapter 6 Network Model

6.1 Scope and Definition of Network Models

6.2 Minimal Spanning Tree Algorithm

6.3 Shortest-route Problem

6.3.1 Examples of the Shortest-Route Applications

6.3.2 Shortest-Route Algorithms

6.3.3 Linear Programming Formulation of the Shortest-Route Problem

6.4 Maximal Flow Model

6.4.1 Enumeration of Cuts

6.4.2 Maximal Flow Algorithm

6.4.3 Linear Programming Formulation of Maximal Flow Mode

6.5 CPM and Pert

6.5.1 Network Representation

Table of Contents

6.5.2 Critical Path Method (CPM) Computations

6.5.3 Construction of the Time Schedule

6.5.4 Linear Programming Formulation of CPM

6.5.5 Pert Networks

Bibliography

Problems

Chapter 7 Advanced Linear Programming

7.1 Simplex Method Fundamentals

7.1.1 From Extreme Points to Basic Solutions

7.1.2 Generalized Simplex Tableau in Matrix Form

7.2 Revised Simplex Method

7.2.1 Development of the Optimality and Feasibility Conditions

7.2.2 Revised Simplex Algorithm

7.2.3 Computational Issues in the Revised Simplex Method

7.3 Bounded-Variables Algorithm

7.4 Duality

7.4.1 Matrix Definition of the Dual Problem

7.4.2 Optimal Dual Solution

7.5 Parametric Linear Programming

7.5.1 Parametric Changes in C

7.5.2 Parametric Changes in B

7.6 More Linear Programming Topics

Bibliography

Problems

Chapter 8 Goal Programming

8.1 A Goal Programming Formulation

8.2 Goal Programming Algorithms

8.2.1 The Weights Method

Table of Contents

8.2.2 The Preemptive Method

Bibliography

Case Study: Allocation of Operating Room Time in Mount Sinai
Hospital

Problems

Chapter 9 Integer Linear Programming

9.1 Illustrative Applications

9.1.1 Capital Budgeting

9.1.2 Set-Covering Problem

9.1.3 Fixed-Charge Problem

9.1.4 Either-Or and If-Then Constraints

9.2 Integer Programming Algorithms

9.2.1 Branch-and-Bound (B&B) Algorithm

9.2.2 Cutting-Plane Algorithm

9.2 Integer Programming Algorithms

Bibliography

Problems

Chapter 10 Heuristic Programming

10.1 Introduction

10.2 Greedy (Local Search) Heuristics

10.2.1 Discrete Variable Heuristic

10.2.2 Continuous Variable Heuristic

10.3 Metaheuristic

10.3.1 Tabu Search Algorithm

10.3.2 Simulated Annealing Algorithm

10.3.3 Genetic Algorithm

10.4 Application of Metaheuristics to Integer Linear Programs

10.4.1 ILP Tabu Algorithm

Table of Contents

10.4.2 ILP Simulated Annealing Algorithm

10.4.3 ILP Genetic Algorithm

10.5 Introduction To Constraint Programming (CP)

Bibliography

Problems

Chapter 11 Traveling Salesperson Problem (TSP)

11.1 Scope of the TSP

11.2 TSP Mathematical Model

11.3 Exact TSP Algorithms

11.3.1 B&B Algorithm

11.3.2 Cutting-Plane Algorithm

11.4 Local Search Heuristics

11.4.1 Nearest-Neighbor Heuristic

11.4.2 Reversal Heuristic

11.5 Metaheuristics

11.5.1 TSP Tabu Algorithm

11.5.2 TSP Simulated Annealing Algorithm

11.5.3 TSP Genetic Algorithm

Bibliography

Problems

Chapter 12 Deterministic Dynamic Programming

12.1 Recursive Nature of Dynamic Programming (DP) Computations

12.2 Forward and Backward Recursion

12.3 Selected DP Applications

12.3.1 Knapsack/Fly-Away Kit/cargo-Loading Model

12.3.2 Workforce Size Model

12.3.3 Equipment Replacement Model

12.3.4 Investment Model

Table of Contents

12.3.5 Inventory Models

12.4 Problem of Dimensionality

Bibliography

Case Study: Optimization of Crosscutting and Log Allocation at
Weyerhaeuser

Problems

Chapter 13 Inventory Modeling (with Introduction to Supply Chains)

13.1 Inventory Problem: A Supply Chain Perspective

13.1.1 An Inventory Metric in Supply Chains

13.1.2 Elements of the Inventory Optimization Model

13.2 Role of Demand In the Development of Inventory Models

13.3 Static Economic-Order-Quantity Models

13.3.1 Classical EOQ Model

13.3.2 EOQ with Price Breaks

13.3.3 Multi-Item EOQ With Storage Limitation

13.4 Dynamic EOQ Models

13.4.1 No-Setup EOQ Model

13.4.2 Setup EOQ Model

13.5 Sticky Issues in Inventory Modeling

Bibliography

Case Study: Kroger Improves Pharmacy Inventory Management

Problems

Chapter 14 Review of Basic Probability

14.1 Laws of Probability

14.1.1 Addition Law of Probability

14.1.2 Conditional Law of Probability

14.2 Random Variables and Probability Distributions

Table of Contents

14.3 Expectation of a Random Variable

14.3.1 Mean and Variance (Standard Deviation) of a Random Variable

14.3.2 Joint Random Variables

14.4 Four Common Probability Distributions

14.4.1 Binomial Distribution

14.4.2 Poisson Distribution

14.4.3 Negative Exponential Distribution

14.4.4 Normal Distribution

14.5 Empirical Distributions

Bibliography

Problems

Chapter 15 Decision Analysis and Games

15.1 Decision Making Under CertaintyAnalytic Hierarchy
Process (AHP)

15.2 Decision Making Under Risk

15.2.1 Decision TreeBased Expected Value Criterion

15.2.2 Variants of the Expected Value Criterion

15.3 Decision Under Uncertainty

15.4 Game Theory

15.4.1 Optimal Solution of Two-Person Zero-Sum Games

15.4.2 Solution of Mixed Strategy Games

Bibliography

Case Study: Booking Limits in Hotel Reservations

Problems

Chapter 16 Probabilistic Inventory Models

16.1 Continuous Review Models

16.1.1 Probabilitized EOQ Model

16.1.2 Probabilistic EOQ Model

Table of Contents

16.2 Single-Period Models

16.2.1 No-Setup Model (Newsvendor Model)

16.2.2 Setup Model (s-S Policy)

16.3 Multiperiod Model

Bibliography

Problems

Chapter 17 Markov Chains

17.1 Definition of a Markov Chain

17.2 Absolute and n-Step Transition Probabilities

17.3 Classification of the States in a Markov Chain

17.4 Steady-State Probabilities and Mean Return Times of Ergodic Chains

17.5 First Passage Time

17.6 Analysis of Absorbing States

Bibliography

Problems

Chapter 18 Queuing Systems

18.1 Why Study Queues?

18.2 Elements of a Queuing Model

18.3 Role of Exponential Distribution

18.4 Pure Birth and Death Models (Relationship Between the Exponential and Poisson Distributions)

18.4.1 Pure Birth Model

18.4.2 Pure Death Model

18.5 General Poisson Queuing Model

18.6 Specialized Poisson Queues

18.6.1 Steady-State Measures of Performance

Table of Contents

18.6.2 Single-Server Models

18.6.3 Multiple-Server Models

18.6.4 Machine Servicing Model(M/M/R):(GD/K/K), $R < K$

18.7 (M/G/1):(GD//)—Pollaczek–Khintchine (P–K) Formula

18.8 Other Queuing Models

18.9 Queuing Decision Models

18.9.1 Cost Models

18.9.2 Aspiration Level Model

Bibliography

Case Study: Analysis of an Internal Transport System in a Manufacturing Plant

Problems

Chapter 19 Simulation Modeling

19.1 Monte Carlo Simulation

19.2 Types of Simulation

19.3 Elements of Discrete Event Simulation

19.3.1 Generic Definition of Events

19.3.2 Sampling From Probability Distributions

19.4 Generation of Random Numbers

19.5 Mechanics of Discrete Simulation

19.5.1 Manual Simulation of a Single-Server Model

19.5.2 Spreadsheet-Based Simulation of the Single-Server Model

19.6 Methods for Gathering Statistical Observations

19.6.1 Subinterval Method

19.6.2 Replication Method

19.7 Simulation Languages

Bibliography

Problems

Table of Contents

Chapter 20 Classical Optimization Theory

20.1 Unconstrained Problems

20.1.1 Necessary and Sufficient Conditions

20.1.2 The NewtonRaphson Method

20.2 Constrained Problems

20.2.1 Equality Constraints

20.2.2 Inequality ConstraintsKarushKuhnTucker (KKT) Conditions

Bibliography

Problems

Chapter 21 Nonlinear Programming Algorithms

21.1 Unconstrained Algorithms

21.1.1 Direct Search Method

21.1.2 Gradient Method

21.2 Constrained Algorithms

21.2.1 Separable Programming

21.2.2 Quadratic Programming

21.2.3 Chance-Constrained Programming

21.2.4 Linear Combinations Method

21.2.5 Sumt Algorithm

Bibliography

Problems

Appendix A Statistical Tables

Appendix B Partial Answers to Selected Problems
