

GLOBAL
EDITION

Java™

An Introduction to Problem Solving & Programming

EIGHTH EDITION

Walter Savitch

Pearson

Digital Resources for Students

Your new textbook provides 12-month access to digital resources that may include VideoNotes (step-by-step video tutorials on programming concepts), source code, web chapters, quizzes, and more. Refer to the preface in the textbook for a detailed list of resources.

Follow the instructions below to register for the Companion Website for Walter Savitch's *Java™: An Introduction to Problem Solving and Programming*, Eighth Edition, Global Edition.

1. Go to www.pearsonglobaleditions.com/Savitch
2. Enter the title of your textbook or browse by author name.
3. Click Companion Website.
4. Click Register and follow the on-screen instructions to create a login name and password.

ISSIPS-PRANK-BURRY-ENDUE-GABBY-TOUSE

Use the login name and password you created during registration to start using the online resources that accompany your textbook.

IMPORTANT:

This prepaid subscription does not include access to Pearson MyLab Programming, which is available at www.myprogramminglab.com for purchase.

This access code can only be used once. This subscription is valid for 12 months upon activation and is not transferable. If the access code has already been revealed it may no longer be valid.

For technical support go to <https://support.pearson.com/getsupport>

Dependency Chart

Brief Contents

Contents

Chapter 1 Introduction to Computers and Java

1.1 COMPUTER BASICS

Hardware and Memory

Programs

Programming Languages, Compilers, and Interpreters

Java Bytecode

Class Loader

1.2 A SIP OF JAVA

History of the Java Language

Applications and Applets

Table of Contents

A First Java Application Program

Writing, Compiling, and Running a Java Program

1.3 PROGRAMMING BASICS

Object-Oriented Programming

Algorithms

Testing and Debugging

Software Reuse

1.4 GRAPHICS SUPPLEMENT

A Sample JavaFX Application

Size and Position of Figures

Drawing Ovals and Circles

Drawing Arcs

Chapter 2 Basic Computation

2.1 VARIABLES AND EXPRESSIONS

Variables

Data Types

Java Identifiers

Assignment Statements

Simple Input

Simple Screen Output

Constants

Named Constants

Assignment Compatibilities

Type Casting

Arithmetic Operators

Parentheses and Precedence Rules

Specialized Assignment Operators

Case Study: Vending Machine Change

Increment and Decrement Operators

Table of Contents

More About the Increment and Decrement Operators

2.2 THE CLASS String

String Constants and Variables

Concatenation of Strings

String Methods

String Processing

Escape Characters

The Unicode Character Set

2.3 KEYBOARD AND SCREEN I/O

Screen Output

Keyboard Input

Other Input Delimiters (Optional)

Formatted Output with printf (Optional)

2.4 DOCUMENTATION AND STYLE

Meaningful Variable Names

Comments

Indentation

Using Named Constants

2.5 GRAPHICS SUPPLEMENT

Style Rules Applied to a JavaFX Application

Introducing the Class JOptionPane

Reading Input as Other Numeric Types

Programming Example: Change-Making Program with Windowing I/O

Chapter 3 Flow of Control: Branching

3.1 THE if-else STATEMENT

The Basic if-else Statement

Boolean Expressions

Comparing Strings

Nested if-else Statements

Table of Contents

Multibranch if-else Statements

Programming Example: Assigning Letter Grades

Case Study: Body Mass Index

The Conditional Operator (Optional)

The exit Method

3.2 THE TYPE boolean

Boolean Variables

Precedence Rules

Input and Output of Boolean Values

3.3 THE switch STATEMENT

Enumerations

3.4 GRAPHICS SUPPLEMENT

Specifying a Drawing Color

A Dialog Box for a Yes-or-No Question

Chapter 4 Flow of Control: Loops

4.1 JAVA LOOP STATEMENTS

The while Statement

The do-while Statement

Programming Example: Bug Infestation

Programming Example: Nested Loops

The for Statement

Declaring Variables Within a for Statement

Using a Comma in a for Statement (Optional)

The for-each Statement

4.2 PROGRAMMING WITH LOOPS

The Loop Body

Initializing Statements

Controlling the Number of Loop Iterations

Case Study: Using a Boolean Variable to End a Loop

Table of Contents

Programming Example: Spending Spree

The break Statement and continue Statement in Loops (Optional)

Loop Bugs

Tracing Variables

Assertion Checks

4.3 GRAPHICS SUPPLEMENT

Programming Example: A Multiface JavaFX Application

Drawing Text

Chapter 5 Defining Classes and Methods

5.1 CLASS AND METHOD DEFINITIONS

Class Files and Separate Compilation

Programming Example: Implementing a Dog Class

Instance Variables

Methods

Defining void Methods

Defining Methods That Return a Value

Programming Example: First Try at Implementing a Species Class

The Keyword this

Local Variables

Blocks

Parameters of a Primitive Type

5.2 INFORMATION HIDING AND ENCAPSULATION

Information Hiding

Precondition and Postcondition Comments

The public and private Modifiers

Programming Example: A Demonstration of Why Instance Variables Should Be Private

Programming Example: Another Implementation of a Class of Rectangles

Accessor Methods and Mutator Methods

Programming Example: A Purchase Class

Methods Calling Methods

Table of Contents

Encapsulation

Automatic Documentation with javadoc

UML Class Diagrams

5.3 OBJECTS AND REFERENCES

Variables of a Class Type

Defining an equals Method for a Class

Programming Example: A Species Class

Boolean-Valued Methods

Case Study: Unit Testing

Parameters of a Class Type

Programming Example: Class-Type Parameters Versus Primitive-Type Parameters

5.4 GRAPHICS SUPPLEMENT

The GraphicsContext Class

Programming Example: Multiple Faces, but with a Helping Method

Adding Labels to a JavaFX Application

Chapter 6 More About Objects and Methods

6.1 CONSTRUCTORS

Defining Constructors

Calling Methods from Constructors

Calling a Constructor from Other Constructors (Optional)

6.2 STATIC VARIABLES AND STATIC METHODS

Static Variables

Static Methods

Dividing the Task of a main Method into Subtasks

Adding a main Method to a Class

The Math Class

Wrapper Classes

6.3 WRITING METHODS

Case Study: Formatting Output

Table of Contents

Decomposition

Addressing Compiler Concerns

Testing Methods

6.4 OVERLOADING

Overloading Basics

Overloading and Automatic Type Conversion

Overloading and the Return Type

Programming Example: A Class for Money

6.5 INFORMATION HIDING REVISITED

Privacy Leaks

6.6 ENUMERATION AS A CLASS

6.7 PACKAGES

Packages and Importing

Package Names and Directories

Name Clashes

6.8 GRAPHICS SUPPLEMENT

Adding Buttons

Adding Icons

Chapter 7 Arrays

7.1 ARRAY BASICS

Creating and Accessing Arrays

Array Details

The Instance Variable length

More About Array Indices

Initializing Arrays

7.2 ARRAYS IN CLASSES AND METHODS

Case Study: Sales Report

Indexed Variables as Method Arguments

Entire Arrays as Arguments to a Method

Table of Contents

Arguments for the Method main

Array Assignment and Equality

Methods That Return Arrays

7.3 PROGRAMMING WITH ARRAYS AND CLASSES

Programming Example: A Specialized List Class

Partially Filled Arrays

7.4 SORTING AND SEARCHING ARRAYS

Selection Sort

Other Sorting Algorithms

Searching an Array

7.5 MULTIDIMENSIONAL ARRAYS

Multidimensional-Array Basics

Multidimensional-Array Parameters and Returned Values

Javas Representation of Multidimensional Arrays

Ragged Arrays (Optional)

Programming Example: Employee Time Records

7.6 GRAPHICS SUPPLEMENT

Layout Panes

Text Areas, Text Fields and Combining Layouts

Drawing Polygons

Chapter 8 Inheritance, Polymorphism, and Interfaces

8.1 INHERITANCE BASICS

Derived Classes

Overriding Method Definitions

Overriding Versus Overloading

The final Modifier

Private Instance Variables and Private Methods of a Base Class

UML Inheritance Diagrams

8.2 PROGRAMMING WITH INHERITANCE

Table of Contents

Constructors in Derived Classes

The this Method Again

Calling an Overridden Method

Programming Example: A Derived Class of a Derived Class

Another Way to Define the equals Method in Undergraduate

Type Compatibility

The Class Object

A Better equals Method

8.3 POLYMORPHISM

Dynamic Binding and Inheritance

Dynamic Binding with toString

8.4 INTERFACES AND ABSTRACT CLASSES

Class Interfaces

Java Interfaces

Implementing an Interface

An Interface as a Type

Extending an Interface

Case Study: Character Graphics

Case Study: The Comparable Interface

Abstract Classes

8.5 GRAPHICS SUPPLEMENT

Event-Driven Programming

Event Handling in a Separate Class

Event Handling in the Main GUI Application Class

Event Handling in an Anonymous Inner Class

Programming Example: Adding Numbers

Chapter 9 Exception Handling

9.1 BASIC EXCEPTION HANDLING

Exceptions in Java

Table of Contents

Predefined Exception Classes

9.2 DEFINING YOUR OWN EXCEPTION CLASSES

9.3 MORE ABOUT EXCEPTION CLASSES

Declaring Exceptions (Passing the Buck)

Kinds of Exceptions

Errors

Multiple Throws and Catches

The finally Block

Rethrowing an Exception (Optional)

Case Study: A Line-Oriented Calculator

9.4 GRAPHICS SUPPLEMENT

Additional User Interface Controls and Shapes

Images and Shapes

Handling Mouse Events

The Timeline Class

Chapter 10 Streams, File I/O, and Networking

10.1 AN OVERVIEW OF STREAMS AND FILE I/O

The Concept of a Stream

Why Use Files for I/O?

Text Files and Binary Files

10.2 TEXT-FILE I/O

Creating a Text File

Appending to a Text File

Reading from a Text File

10.3 TECHNIQUES FOR ANY FILE

The Class File

Programming Example: Reading a File Name from the Keyboard

Using Path Names

Methods of the Class File

Table of Contents

Defining a Method to Open a Stream

Case Study: Processing a Comma-Separated Values File

10.4 BASIC BINARY-FILE I/O

Creating a Binary File

Writing Primitive Values to a Binary File

Writing Strings to a Binary File

Some Details About writeUTF

Reading from a Binary File

The Class EOFException

Programming Example: Processing a File of Binary Data

10.5 BINARY-FILE I/O WITH OBJECTS AND ARRAYS

Binary-File I/O with Objects of a Class

Some Details of Serialization

Array Objects in Binary Files

10.6 NETWORK COMMUNICATION WITH STREAMS

10.7 GRAPHICS SUPPLEMENT

Programming Example: A JavaFX GUI for Manipulating Files

Chapter 11 Recursion

11.1 THE BASICS OF RECURSION

Case Study: Digits to Words

How Recursion Works

Infinite Recursion

Recursive Methods Versus Iterative Methods

Recursive Methods That Return a Value

11.2 PROGRAMMING WITH RECURSION

Programming Example: Insisting That User Input Be Correct

Case Study: Binary Search

Programming Example: Merge SortA Recursive Sorting Method

11.3 GRAPHICS SUPPLEMENT

Table of Contents

Lambda Functions and Event Handlers

Chapter 12 Dynamic Data Structures and Generics

12.1 ARRAY-BASED DATA STRUCTURES

The Class ArrayList

Creating an Instance of ArrayList

Using the Methods of ArrayList

Programming Example: A To-Do List

Parameterized Classes and Generic Data Types

12.2 THE JAVA COLLECTIONS FRAMEWORK

The Collection Interface

The Class HashSet

The Map Interface

The Class HashMap

12.3 LINKED DATA STRUCTURES

The Class LinkedList

Linked Lists

Implementing the Operations of a Linked List

A Privacy Leak

Inner Classes

Node Inner Classes

Iterators

The Java Iterator Interface

Exception Handling with Linked Lists

Variations on a Linked List

Other Linked Data Structures

12.4 GENERICS

The Basics

Programming Example: A Generic Linked List

12.5 GRAPHICS SUPPLEMENT

Table of Contents

Building JavaFX Applications with the Scene Builder

Where to Go from Here

APPENDICES

1 Getting Java

2 Running Applets

3 Protected and Package Modifiers

4 The DecimalFormat Class

Other Pattern Symbols

5 Javadoc

Commenting Classes for Use with javadoc

Running javadoc

6 Differences Between C++ and Java

Primitive Types

Strings

Flow of Control

Testing for Equality

main Method (Function) and Other Methods

Files and Including Files

Class and Method (Function) Definitions

No Pointer Types in Java

Method (Function) Parameters

Arrays

Garbage Collection

Other Comparisons

7 Unicode Character Codes

8 Introduction to Java 8 Functional Programming

9 The Iterator Interface

10 Cloning

Table of Contents

11 Java Reserved Keywords
