Overview

Contents

Foreword

Preface

Acknowledgments

Part I Single-Degree-of-Freedom Systems

1 Equations of Motion, Problem Statement, and Solution Methods

- 1.1 Simple Structures
- 1.2 Single-Degree-of-Freedom System
- 1.3 ForceDisplacement Relation
- 1.4 Damping Force
- 1.5 Equation of Motion: External Force
- 1.6 MassSpringDamper System
- 1.7 Equation of Motion: Earthquake Excitation
- 1.8 Problem Statement and Element Forces
- 1.9 Combining Static and Dynamic Responses
- 1.10 Methods of Solution of the Differential Equation
- 1.11 Study of Sdf Systems: Organization
- Appendix 1: Stiffness Coefficients for a Flexural Element

2 Free Vibration

- 2.1 Undamped Free Vibration
- 2.2 Viscously Damped Free Vibration
- 2.3 Energy in Free Vibration
- 2.4 Coulomb-Damped Free Vibration

Table of Contents

3 Response to Harmonic and Periodic Excitations

Part A: Viscously Damped Systems: Basic Results

- 3.1 Harmonic Vibration of Undamped Systems
- 3.2 Harmonic Vibration with Viscous Damping

Part B: Viscously Damped Systems: Applications

- 3.3 Response to Vibration Generator
- 3.4 Natural Frequency and Damping from Harmonic Tests
- 3.5 Force Transmission and Vibration Isolation
- 3.6 Response to Ground Motion and Vibration Isolation
- 3.7 Vibration-measuring Instruments
- 3.8 Energy Dissipated in Viscous Damping
- 3.9 Equivalent Viscous Damping

Part C: Systems with Nonviscous Damping

- 3.10 Harmonic Vibration with Rate-independent Damping
- 3.11 Harmonic Vibration with Coulomb Friction

Part D: Response to Periodic Excitation

- 3.12 Fourier Series Representation
- 3.13 Response to Periodic Force
- Appendix 3: Four-Way Logarithmic Graph Paper

4 Response to Arbitrary, Step, and Pulse Excitations

Part A: Response to Arbitrarily Time-varying Forces

- 4.1 Response to Unit Impulse
- 4.2 Response to Arbitrary Force

Part B: Response to Step and Ramp Forces

- 4.3 Step Force
- 4.4 Ramp or Linearly Increasing Force
- 4.5 Step Force with Finite Rise Time

Part C: Response to Pulse Excitations

- 4.6 Solution Methods
- 4.7 Rectangular Pulse Force
- 4.8 Half-Cycle Sine Pulse Force
- 4.9 Symmetrical Triangular Pulse Force
- 4.10 Effects of Pulse Shape and Approximate Analysis for Short Pulses
- 4.11 Effects of Viscous Damping
- 4.12 Response to Ground Motion

5 Numerical Evaluation of Dynamic Response

Table of Contents

- 5.1 Time-Stepping Methods
- 5.2 Methods Based on Interpolation of Excitation
- 5.3 Central Difference Method
- 5.4 Newmarks Method
- 5.5 Stability and Computational Error
- 5.6 Nonlinear Systems: Central Difference Method
- 5.7 Nonlinear Systems: Newmarks Method

6 Earthquake Response of Linear Systems

- 6.1 Earthquake Excitation
- 6.2 Equation of Motion
- 6.3 Response Quantities
- 6.4 Response History
- 6.5 Response Spectrum Concept
- 6.6 Deformation, Pseudo-Velocity, and Pseudo-Acceleration Response Spectra
- 6.7 Peak Structural Response from the Response Spectrum
- 6.8 Response Spectrum Characteristics
- 6.9 Elastic Design Spectrum
- 6.10 Comparison of Design and Response Spectra
- 6.11 Distinction Between Design and Response Spectra
- 6.12 Velocity and Acceleration Response Spectra
- Appendix 6: El Centro, 1940 Ground Motion

7 Earthquake Response of Inelastic Systems

- 7.1 Force-Deformation Relations
- 7.2 Normalized Yield Strength, Yield-strength Reduction Factor, and Ductility Factor
- 7.3 Equation of Motion and Controlling Parameters
- 7.4 Effects of Yielding
- 7.5 Response Spectrum for Yield Deformation and Yield Strength
- 7.6 Yield Strength and Deformation from the Response Spectrum
- 7.7 Yield Strength-Ductility Relation
- 7.8 Relative Effects of Yielding and Damping
- 7.9 Dissipated Energy
- 7.10 Supplemental Energy Dissipation Devices
- 7.11 Inelastic Design Spectrum

Table of Contents

7.12 Applications of the Design Spectrum

7.13 Gravity Load Effects and Collapse

8 Generalized Single-Degree-of-Freedom Systems

8.1 Generalized SDF Systems

8.2 Rigid-Body Assemblages

8.3 Systems With Distributed Mass and Elasticity

8.4 Lumped-Mass System: Shear Building

8.5 Natural Vibration Frequency by Rayleighs Method

8.6 Selection of Shape Function

Appendix 8: Inertia Forces for Rigid Bodies

Part II Multi-Degree-of-Freedom Systems

9 Equations of Motion, Problem Statement, and Solution Methods

9.1 Simple System: Two-story Shear Building

9.2 General Approach for Linear Systems

9.3 Static Condensation

9.4 Planar or Symmetric-Plan Systems: Ground Motion

9.5 One-Story Unsymmetric-Plan Buildings

9.6 Multistory Unsymmetric-Plan Buildings

9.7 Multiple Support Excitation

9.8 Inelastic Systems

9.9 Problem Statement

9.10 Element Forces

9.11 Methods for Solving the Equations of Motion: Overview

10 Free Vibration

Part A: Natural Vibration Frequencies and Modes

10.1 Systems Without Damping

10.2 Natural Vibration Frequencies and Modes

10.3 Modal and Spectral Matrices

10.4 Orthogonality of Modes

10.5 Interpretation of Modal Orthogonality

10.6 Normalization of Modes

10.7 Modal Expansion of Displacements

Part B: Free Vibration Response

10.8 Solution of Free Vibration Equations: Undamped Systems

Table of Contents

10.9 Systems with Damping

10.10 Solution of Free Vibration Equations: Classically Damped Systems

Part C: Computation of Vibration Properties

10.11 Solution Methods for the Eigenvalue Problem

10.12 Rayleighs Quotient

10.13 Inverse Vector Iteration Method

10.14 Vector Iteration with Shifts: Preferred Procedure

10.15 Transformation of $k=2m$ to the Standard Form

11 Damping in Structures

Part A: Experimental Data and Recommended Modal Damping Ratios

11.1 Vibration Properties of Millikan Library Building

11.2 Estimating Modal Damping Ratios

Part B: Construction of Damping Matrix

11.3 Damping Matrix

11.4 Classical Damping Matrix

11.5 Nonclassical Damping Matrix

12 Dynamic Analysis and Response of Linear Systems

Part A: Two-Degree-of-Freedom Systems

12.1 Analysis of Two-Dof Systems Without Damping

12.2 Vibration Absorber or Tuned Mass Damper

Part B: Modal Analysis

12.3 Modal Equations for Undamped Systems

12.4 Modal Equations for Damped Systems

12.5 Displacement Response

12.6 Element Forces

12.7 Modal Analysis: Summary

Part C: Modal Response Contributions

12.8 Modal Expansion of Excitation Vector $p(t)=sp(t)$

12.9 Modal Analysis for $P(t)=sp(t)$

12.10 Modal Contribution Factors

12.11 Modal Responses and Required Number of Modes

Part D: Special Analysis Procedures

12.12 Static Correction Method

12.13 Mode Acceleration Superposition Method

12.14 Mode Acceleration Superposition Method: Arbitrary Excitation

13 Earthquake Analysis of Linear Systems

Table of Contents

Part A: Response History Analysis

- 13.1 Modal Analysis
- 13.2 Multistory Buildings with Symmetric Plan
- 13.3 Multistory Buildings with Unsymmetric Plan
- 13.4 Torsional Response of Symmetric-plan Buildings
- 13.5 Response Analysis for Multiple Support Excitation
- 13.6 Structural Idealization and Earthquake Response

Part B: Response Spectrum Analysis

- 13.7 Peak Response from Earthquake Response Spectrum
- 13.8 Multistory Buildings with Symmetric Plan
- 13.9 Multistory Buildings with Unsymmetric Plan
- 13.10 A Response-spectrum-based Envelope for Simultaneous Responses
- 13.11 A Response-Spectrum-Based Estimation of Principal Stresses
- 13.12 Peak Response to Multicomponent Ground Motion

14 Analysis of Nonclassically Damped Linear Systems

Part A: Classically Damped Systems: Reformulation

- 14.1 Natural Vibration Frequencies and Modes
- 14.2 Free Vibration
- 14.3 Unit Impulse Response
- 14.4 Earthquake Response

Part B: Nonclassically Damped Systems

- 14.5 Natural Vibration Frequencies and Modes
- 14.6 Orthogonality of Modes
- 14.7 Free Vibration
- 14.8 Unit Impulse Response
- 14.9 Earthquake Response
- 14.10 Systems With Real-Valued Eigenvalues
- 14.11 Response Spectrum Analysis
- 14.12 Summary

Appendix 14: Derivations

15 Reduction of Degrees of Freedom

- 15.1 Kinematic Constraints
- 15.2 Mass Lumping in Selected Dofs
- 15.3 Rayleigh-Ritz Method
- 15.4 Selection of Ritz Vectors
- 15.5 Dynamic Analysis Using Ritz Vectors

Table of Contents

16 Numerical Evaluation of Dynamic Response

- 16.1 Time-Stepping Methods
- 16.2 Linear Systems With Nonclassical Damping
- 16.3 Nonlinear Systems

17 Systems with Distributed Mass and Elasticity

- 17.1 Equation of Undamped Motion: Applied Forces
- 17.2 Equation of Undamped Motion: Support Excitation
- 17.3 Natural Vibration Frequencies and Modes
- 17.4 Modal Orthogonality
- 17.5 Modal Analysis of Forced Dynamic Response
- 17.6 Earthquake Response History Analysis
- 17.7 Earthquake Response Spectrum Analysis
- 17.8 Difficulty in Analyzing Practical Systems

18 Introduction to the Finite Element Method

Part A: RayleighRitz Method

- 18.1 Formulation Using Conservation of Energy
- 18.2 Formulation Using Virtual Work
- 18.3 Disadvantages of RayleighRitz Method

Part B: Finite Element Method

- 18.4 Finite Element Approximation
- 18.5 Analysis Procedure
- 18.6 Element Degrees of Freedom and Interpolation Functions
- 18.7 Element Stiffness Matrix
- 18.8 Element Mass Matrix
- 18.9 Element Geometric Stiffness Matrix
- 18.10 Element (Applied) Force Vector
- 18.11 Comparison of Finite Element and Exact Solutions
- 18.12 Dynamic Analysis of Structural Continua

Part III Earthquake Response, Design, and Evaluation of Multistory Buildings

19 Earthquake Response of Linearly Elastic Buildings

- 19.1 Systems Analyzed, Design Spectrum, and Response Quantities
- 19.2 Influence of T_1 and ζ on Response
- 19.3 Modal Contribution Factors

Table of Contents

- 19.4 Influence of T_1 on Higher-Mode Response
- 19.5 Influence of γ on Higher-Mode Response
- 19.6 Heightwise Variation of Higher-Mode Response
- 19.7 How Many Modes to Include

20 Earthquake Analysis and Response of Inelastic Buildings

Part A: Nonlinear Response History Analysis

- 20.1 Equations of Motion: Formulation and Solution
- 20.2 Computing Seismic Demands: Factors to Be Considered
- 20.3 Story Drift Demands
- 20.4 Strength Demands for Sdf and MDF Systems

Part B: Structural Modeling

- 20.5 Overall System
- 20.6 Structural Elements
- 20.7 Viscous Damping

Part C: Ground Motion Selection and Modification

- 20.8 Target Spectrum
- 20.9 Ground Motion Selection and Amplitude Scaling
- 20.10 Ground Motion Selection to Match Target Spectrum Mean and Variance
- 20.11 Influence of Gm Selection and Amplitude Scaling on Seismic Demands
- 20.12 Ground Motion Selection and Spectral Matching
- 20.13 Influence of GM Selection and Spectral Matching on Seismic Demands
- 20.14 Amplitude Scaling Versus Spectral Matching of Ground Motions

Part D: Approximate Analysis Procedures

- 20.15 Motivation and Basic Concept
- 20.16 Uncoupled Modal Response History Analysis
- 20.17 Modal Pushover Analysis
- 20.18 Evaluation of Modal Pushover Analysis
- 20.19 Simplified Modal Pushover Analysis for Practical Application

21 Earthquake Dynamics of Base-Isolated Buildings

- 21.1 Isolation Systems
- 21.2 Base-Isolated One-Story Buildings
- 21.3 Effectiveness of Base Isolation
- 21.4 Base-Isolated Multistory Buildings
- 21.5 Applications of Base Isolation

22 Structural Dynamics in Building Codes

Table of Contents

Part A: Building Codes and Structural Dynamics

- 22.1 International Building Code (United States), 2018
- 22.2 National Building Code of Canada, 2015
- 22.3 Mexico Federal District Code, 2004
- 22.4 Eurocode 8, 2004
- 22.5 Structural Dynamics in Building Codes

Part B: Evaluation of Building Codes

- 22.6 Base Shear
- 22.7 Story Shears and Equivalent Static Forces
- 22.8 Overturning Moments
- 22.9 Concluding Remarks

23 Structural Dynamics in Building Evaluation Guidelines

- 23.1 Nonlinear Dynamic Procedure: Current Practice
- 23.2 SDF-System Estimate of Roof Displacement
- 23.3 Estimating Deformation of Inelastic SDF Systems
- 23.4 Nonlinear Static Procedures
- 23.5 Concluding Remarks

A Frequency-Domain Method of Response Analysis

B Notation

C Answers to Selected Problems
