Contents

Preface

### **Part I: Introduction**

#### **Chapter one: Introducing mechatronics**

Objectives

1.1 What is mechatronics?

1.2 The design process

1.3 Systems

1.4 Measurement systems

1.5 Control systems

1.6 Programmable logic controller

1.7 Examples of mechatronic systems

Summary

Problems

### **Part II: Sensors and signal conditioning**

#### **Chapter two: Sensors and transducers**

Objectives

2.1 Sensors and transducers

2.2 Performance terminology

2.3 Displacement, position and proximity

2.4 Velocity and motion

2.5 Force

# Table of Contents

- 2.6 Fluid pressure
- 2.7 Liquid flow
- 2.8 Liquid level
- 2.9 Temperature
- 2.10 Light sensors
- 2.11 Selection of sensors
- 2.12 Inputting data by switches
- Summary
- Problems

## Chapter three: Signal conditioning

- objectives
- 3.1 Signal conditioning
- 3.2 The operational amplifier
- 3.3 Protection
- 3.4 Filtering
- 3.5 Wheatstone bridge
- 3.6 Pulse modulation
- 3.7 Problems with signals
- 3.8 Power transfer
- Summary
- Problems

## Chapter four: Digital signals

- objectives
- 4.1 Digital signals
- 4.2 Analogue and digital signals
- 4.3 Digital-to-analogue and analogue-to-digital converters
- 4.4 Multiplexers
- 4.5 Data acquisition
- 4.6 Digital signal processing
- 4.7 Digital signal communications
- Summary
- Problems

# **Table of Contents**

## **Chapter five: Digital logic**

objectives

5.1 Digital logic

5.2 Logic gates

5.3 Applications of logic gates

5.4 Sequential logic

Summary

Problems

## **Chapter six: Data presentation systems**

objectives

6.1 Displays

6.2 Data presentation elements

6.3 Magnetic recording

6.4 Optical recording

6.5 Displays

6.6 Data acquisition systems

6.7 Measurement systems

6.8 Testing and calibration

Summary

Problems

## **Part III: Actuation**

### **Chapter seven: Pneumatic and hydraulic actuationsystems**

objectives

7.1 Actuation systems

7.2 Pneumatic and hydraulic systems

7.3 Directional control valves

7.4 Pressure control valves

7.5 Cylinders

7.6 Servo and proportional control valves

7.7 Process control valves

Summary

# **Table of Contents**

Problems

## **Chapter eight: Mechanical actuation systems**

objectives

8.1 Mechanical systems

8.2 Types of motion

8.3 Kinematic chains

8.4 Cams

8.5 Gears

8.6 Ratchet and pawl

8.7 Belt and chain drives

8.8 Bearings

8.9 Electromechanical linear actuators

Summary

Problems

## **Chapter nine: Electrical actuation systems**

objectives

9.1 Electrical systems

9.2 Mechanical switches

9.3 Solid-state switches

9.4 Solenoids

9.5 Direct current motors

9.6 Alternating current motors

9.7 Stepper motors

9.8 Direct current servomotors

9.9 Motor selection

Summary

Problems

## **Part IV: Microprocessor systems**

### **Chapter ten: Microprocessors and microcontrollers**

objectives

10.1 Control

# **Table of Contents**

10.2 Microprocessor systems

10.3 Microcontrollers

10.4 Applications

10.5 Programming

Summary

Problems

## **Chapter eleven: Assembly language**

objectives

11.1 Languages

11.2 Assembly language programs

11.3 Instruction sets

11.4 Subroutines

11.5 Look-up tables

11.6 Embedded systems

Summary

Problems

## **Chapter twelve: C language**

objectives

12.1 Why C?

12.2 Program structure

12.3 Branches and loops

12.4 Arrays

12.5 Pointers

12.6 Program development

12.7 Examples of programs

12.8 Arduino programs

Summary

Problems

## **Chapter thirteen: Input/output systems**

objectives

13.1 Interfacing

13.2 Input/output addressing

# **Table of Contents**

- 13.3 Interface requirements
- 13.4 Peripheral interface adapters
- 13.5 Serial communications interface
- 13.6 Examples of interfacing
- Summary
- Problems

## **Chapter fourteen: Programmable logic controllers**

- objectives
- 14.1 Programmable logic controller
- 14.2 Basic PLC structure
- 14.3 Input/output processing
- 14.4 Ladder programming
- 14.5 Instruction lists
- 14.6 Latching and internal relays
- 14.7 Sequencing
- 14.8 Timers and counters
- 14.9 Shift registers
- 14.10 Master and jump controls
- 14.11 Data handling
- 14.12 Analogue input/output
- Summary
- Problems

## **Chapter fifteen: Communication systems**

- objectives
- 15.1 Digital communications
- 15.2 Centralised, hierarchical and distributed control
- 15.3 Networks
- 15.4 Protocols
- 15.5 Open Systems Interconnection communication model
- 15.6 Serial communication interfaces
- 15.7 Parallel communication interfaces
- 15.8 Wireless communications

# **Table of Contents**

Summary

Problems

## **Chapter sixteen: Fault finding**

objectives

16.1 Fault-detection techniques

16.2 Watchdog timer

16.3 Parity and error coding checks

16.4 Common hardware faults

16.5 Microprocessor systems

16.6 Evaluation and simulation

16.7 PLC systems

Summary

Problems

## **Part V: System models**

### **Chapter Seventeen: Basic system models**

objectives

17.1 Mathematical models

17.2 Mechanical system building blocks

17.3 Electrical system building blocks

17.4 Fluid system building blocks

17.5 Thermal system building blocks

Summary

Problems

### **Chapter Eighteen: Engineering systems**

objectives

18.1 Engineering systems

18.2 Rotationaltranslational systems

18.3 Electromechanical systems

18.4 Linearity

18.5 Hydraulicmechanical systems

Summary

# **Table of Contents**

Problems

## **Chapter nineteen: Dynamic responses of systems**

objectives

19.1 Modelling dynamic systems

19.2 Terminology

19.3 First-order systems

19.4 Second-order systems

19.5 Performance measures for second-order systems

19.6 System identification

Summary

Problems

## **Chapter twenty: System transfer functions**

objectives

20.1 The transfer function

20.2 First-order systems

20.3 Second-order systems

20.4 Systems in series

20.5 Systems with feedback loops

20.6 Effect of pole location on transient response

Summary

Problems

## **Chapter twenty-one: Frequency response**

objectives

21.1 Sinusoidal input

21.2 Phasors

21.3 Frequency response

21.4 Bode plots

21.5 Performance specifications

21.6 Stability

Summary

Problems

## **Chapter twenty- two: Closed-loop controllers**

# **Table of Contents**

Objectives

22.1 Control processes

22.2 Two-step or on/off mode

22.3 Proportional mode of control

22.4 Integral mode of control

22.5 Derivative mode of control

22.6 PID controller

22.7 Digital control systems

22.8 Controller tuning

22.9 Velocity control

22.10 Adaptive control

Summary

Problems

## **Chapter twenty-three: Artificial intelligence**

objectives

23.1 What is meant by artificial intelligence

23.2 Perception and cognition

23.3 Fuzzy logic

Summary

Problems

## **Part VI. Conclusion**

### **Chapter twenty-four: Mechatronic systems**

objectives

24.1 Mechatronic designs

24.2 Robotics

24.3 Case studies

Summary

Problems

Research assignments

Design assignments

### **Appendices**

# **Table of Contents**

## Appendix A: The Laplace transform

- A.1 The Laplace transform
- A.2 Unit steps and impulses
- A.3 Standard Laplace transforms
- A.4 The inverse transform
- Problems

## Appendix B: Number systems

- B.1 Number systems
- B.2 Binary mathematics
- B.3 Floating numbers
- B.4 Gray code
- Problems

## Appendix C: Boolean algebra

- C.1 Laws of Boolean algebra
- C.2 De Morgans laws
- C.3 Boolean function generation from truth tables
- C.4 Karnaugh maps
- Problems

Answers
