Brief Contents

Contents

Preface

Acknowledgments for the Global Edition

About the Authors

Tools of Biochemistry

Foundation Figures

Chapter 1: Biochemistry and the Language of Chemistry

1.1. The Science of Biochemistry

The Origins of Biochemistry

The Tools of Biochemistry

Biochemistry as a Discipline and an Interdisciplinary Science

1.2. The Elements and Molecules of Living Systems

The Chemical Elements of Cells and Organisms

The Origin of Biomolecules and Cells

The Complexity and Size of Biological Molecules

The Biopolymers: Proteins, Nucleic Acids, and Carbohydrates

Lipids and Membranes

1.3. Distinguishing Characteristics of Living Systems

1.4. The Unit of Biological Organization: The Cell

1.5. Biochemistry and the Information Explosion

Chapter 2: The Chemical Foundation of Life: Weak Interactions in an Aqueous Environment

2.1. The Importance of Noncovalent Interactions in Biochemistry

2.2. The Nature of Noncovalent Interactions

Charge-Charge Interactions

Dipole and Induced Dipole Interactions

Table of Contents

Van der Waals Interactions

Hydrogen Bonds

2.3. The Role of Water in Biological Processes

The Structure and Properties of Water

Water as a Solvent

Ionic Compounds in Aqueous Solution

Hydrophilic Molecules in Aqueous Solution

Hydrophobic Molecules in Aqueous Solution

Amphipathic Molecules in Aqueous Solution

2.4. AcidBase Equilibria

Acids and Bases: Proton Donors and Acceptors

Ionization of Water and the Ion Product

The pH Scale and the Physiological pH Range

Weak Acid and Base Equilibria: K_a and pK_a

Titration of Weak Acids: The HendersonHasselbalch Equation

Buffer Solutions

Molecules with Multiple Ionizing Groups

2.5. Interactions Between Macroions in Solution

Solubility of Macroions and pH

The Influence of Small Ions: Ionic Strength

Tools of Biochemistry: 2A Electrophoresis and Isoelectric Focusing

Foundation Figure: Biomolecules: Structure and Function

Chapter 3: The Energetics of Life

3.1. Free Energy

Thermodynamic Systems

The First Law of Thermodynamics and Enthalpy

The Driving Force for a Process

Entropy

The Second Law of Thermodynamics

3.2. Free Energy: The Second Law in Open Systems

Free Energy Defined in Terms of Enthalpy and Entropy Changes in the System

An Example of the Interplay of Enthalpy and Entropy: The Transition Between Liquid Water and Ice

The Interplay of Enthalpy and Entropy: A Summary

Free Energy and Useful Work

3.3. The Relationships Between Free Energy, the Equilibrium State, and Nonequilibrium

Concentrations of Reactants and Products

Equilibrium, Le Chateliers Principle, and the Standard State

Table of Contents

Changes in Concentration and ΔG

ΔG versus ΔG° , Q versus K , and Homeostasis versus Equilibrium

Water, H^+ in Buffered Solutions, and the Biochemical Standard State

3.4. Free Energy in Biological Systems

Organic Phosphate Compounds as Energy Transducers

Phosphoryl Group Transfer Potential

Free Energy and Concentration Gradients: A Close Look at Diffusion Through a Membrane

ΔG and Oxidation/Reduction Reactions in Cells

Quantification of Reducing Power: Standard Reduction Potential

Standard Free Energy Changes in Oxidation/Reduction Reactions

Calculating Free Energy Changes for Biological Oxidations under Nonequilibrium Conditions

A Brief Overview of Free Energy Changes in Cells

Chapter 4: Nucleic Acids

4.1. Nucleic Acids Informational Macromolecules

The Two Types of Nucleic Acid: DNA and RNA

Properties of the Nucleotides

Stability and Formation of the Phosphodiester Linkage

4.2. Primary Structure of Nucleic Acids

The Nature and Significance of Primary Structure

DNA as the Genetic Substance: Early Evidence

4.3. Secondary and Tertiary Structures of Nucleic Acids

The DNA Double Helix

Data Leading Toward the Watson/Crick Double-Helix Model

X-Ray Analysis of DNA Fibers

Semiconservative Nature of DNA Replication

Alternative Nucleic Acid Structures: B and A Helices

DNA and RNA Molecules in Vivo

DNA Molecules

Circular DNA and Supercoiling

Single-Stranded Polynucleotides

4.4. Alternative Secondary Structures of DNA

Left-Handed DNA (Z-DNA)

Hairpins and Cruciforms

Triple Helices

G-Quadruplexes

4.5. The Helix-to-Random Coil Transition: Nucleic Acid Denaturation

4.6. The Biological Functions of Nucleic Acids: A Preview of Genetic Biochemistry

Table of Contents

Genetic Information Storage: The Genome

Replication: DNA to DNA

Transcription: DNA to RNA

Translation: RNA to Protein

Tools of Biochemistry: 4A Manipulating DNA

Tools of Biochemistry: 4B An Introduction to X-Ray Diffraction

Chapter 5: Introduction to Proteins: The Primary Level of Protein Structure

5.1. Amino Acids

Structure of the α -Amino Acids

Stereochemistry of the α -Amino Acids

Properties of Amino Acid Side Chains: Classes of α -Amino Acids

Amino Acids with Nonpolar Aliphatic Side Chains

Amino Acids with Nonpolar Aromatic Side Chains

Amino Acids with Polar Side Chains

Amino Acids with Positively Charged (Basic) Side Chains

Amino Acids with Negatively Charged (Acidic) Side Chains

Rare Genetically Encoded Amino Acids

Modified Amino Acids

5.2. Peptides and the Peptide Bond

The Structure of the Peptide Bond

Stability and Formation of the Peptide Bond

Peptides

Polypeptides as Polyampholytes

5.3. Proteins: Polypeptides of Defined Sequence

5.4. From Gene to Protein

The Genetic Code

Posttranslational Processing of Proteins

5.5. From Gene Sequence to Protein Function

5.6. Protein Sequence Homology

Tools of Biochemistry: 5A Protein Expression and Purification

Tools of Biochemistry: 5B Mass, Sequence, and Amino Acid Analyses of Purified Proteins

Chapter 6: The Three-Dimensional Structure of Proteins

6.1. Secondary Structure: Regular Ways to Fold the Polypeptide Chain

Theoretical Descriptions of Regular Polypeptide Structures

α Helices and β Sheets

Describing the Structures: Helices and Sheets

Table of Contents

Amphipathic Helices and Sheets

Ramachandran Plots

6.2. Fibrous Proteins: Structural Materials of Cells and Tissues

The Keratins

Fibroin

Collagen

6.3. Globular Proteins: Tertiary Structure and Functional Diversity

Different Folding for Different Functions

Different Modes of Display Aid Our Understanding of Protein Structure

Varieties of Globular Protein Structure: Patterns of Main-Chain Folding

6.4. Factors Determining Secondary and Tertiary Structure

The Information for Protein Folding

The Thermodynamics of Folding

Conformational Entropy

Charge-Charge Interactions

Internal Hydrogen Bonds

Van der Waals Interactions

The Hydrophobic Effect

Disulfide Bonds and Protein Stability

Prosthetic Groups, Ion-Binding, and Protein Stability

6.5. Dynamics of Globular Protein Structure

Kinetics of Protein Folding

The Energy Landscape Model of Protein Folding

Intermediate and Off-Pathway States in Protein Folding

Chaperones Facilitate Protein Folding in Vivo

Protein Misfolding and Disease

6.6. Prediction of Protein Secondary and Tertiary Structure

Prediction of Secondary Structure

Tertiary Structure Prediction: Computer Simulation of Folding

6.7. Quaternary Structure of Proteins

Symmetry in Multisubunit Proteins: Homotypic Protein-Protein Interactions

Heterotypic Protein-Protein Interactions

Tools of Biochemistry: 6A Spectroscopic Methods for Studying Macromolecular Conformation in Solution

Tools of Biochemistry: 6B Determining Molecular Masses and the Number of Subunits in a Protein Molecule

Foundation Figure: Protein Structure and Function

Table of Contents

Chapter 7: Protein Function and Evolution

7.1. Binding a Specific Target: Antibody Structure and Function

7.2. The Adaptive Immune Response

7.3. The Structure of Antibodies

7.4. Antibody:Antigen Interactions

Shape and Charge Complementarity

Generation of Antibody Diversity

7.5. The Immunoglobulin Superfamily

7.6. The Challenge of Developing an AIDS Vaccine

7.7. Antibodies and Immunoconjugates as Potential Cancer Treatments

7.8. Oxygen Transport from Lungs to Tissues: Protein Conformational Change Enhances Function

7.9. The Oxygen-Binding Sites in Myoglobin and Hemoglobin

Analysis of Oxygen Binding by Myoglobin

7.10. The Role of Conformational Change in Oxygen Transport

Cooperative Binding and Allostery

Models for the Allosteric Change in Hemoglobin

Changes in Hemoglobin Structure Accompanying Oxygen Binding

A Closer Look at the Allosteric Change in Hemoglobin

7.11. Allosteric Effectors of Hemoglobin Promote Efficient Oxygen Delivery to Tissues

Response to pH Changes: The Bohr Effect

Carbon Dioxide Transport

Response to Chloride Ion at the α -Globin N-Terminus

2,3-Bisphosphoglycerate

7.12. Myoglobin and Hemoglobin as Examples of the Evolution of Protein Function

The Structure of Eukaryotic Genes: Exons and Introns

7.13. Mechanisms of Protein Mutation

Substitution of DNA Nucleotides

Nucleotide Deletions or Insertions

Gene Duplications and Rearrangements

Evolution of the MyoglobinHemoglobin Family of Proteins

7.14. Hemoglobin Variants and Their Inheritance: Genetic Diseases

Pathological Effects of Variant Hemoglobins

7.15. Protein Function Requiring Large Conformational Changes: Muscle Contraction

7.16. Actin and Myosin

Actin

Table of Contents

Myosin

7.17. The Structure of Muscle

7.18. The Mechanism of Contraction

Regulation of Contraction: The Role of Calcium

Tools of Biochemistry: 7A Immunological Methods

Chapter 8: Enzymes: Biological Catalysts

8.1. Enzymes As Biological Catalysts

8.2. The Diversity of Enzyme Function

8.3. Chemical Reaction Rates and the Effects of Catalysts

Reaction Rates, Rate Constants, and Reaction Order

First-Order Reactions

Second-Order Reactions

Transition States and Reaction Rates

Transition State Theory Applied to Enzymatic Catalysis

8.4. How Enzymes Act as Catalysts: Principles and Examples

Models for Substrate Binding and Catalysis

Mechanisms for Achieving Rate Acceleration

Case Study #1: Lysozyme

Case Study #2: Chymotrypsin, a Serine Protease

8.5. Coenzymes, Vitamins, and Essential Metals

Coenzyme Function in Catalysis

Metal Ions in Enzymes

8.6. The Kinetics of Enzymatic Catalysis

Reaction Rate for a Simple Enzyme-Catalyzed Reaction: MichaelisMenten Kinetics

Interpreting K_M , k_{cat} , and k_{cat}/K_M

Enzyme Mutants May Affect k_{cat} and K_M Differently

Analysis of Kinetic Data: Testing the MichaelisMenten Model

8.7. Enzyme Inhibition

Reversible Inhibition

Competitive Inhibition

Uncompetitive Inhibition

Mixed Inhibition

Irreversible Inhibition

Multisubstrate Reactions

Random Substrate Binding

Ordered Substrate Binding

Table of Contents

The Ping-Pong Mechanism

Qualitative Interpretation of K_M and V_{max} : Application to Multisubstrate Reaction Mechanisms

8.8. The Regulation of Enzyme Activity

Substrate-Level Control

Feedback Control

Allosteric Enzymes

Homoallostery

Heteroallostery

Aspartate Carbamoyltransferase: An Example of an Allosteric Enzyme

8.9. Covalent Modifications Used to Regulate Enzyme Activity

Pancreatic Proteases: Activation by Irreversible Protein Backbone Cleavage

8.10. Nonprotein Biocatalysts: Catalytic Nucleic Acids

Tools of Biochemistry: 8A How to Measure the Rates of Enzyme-Catalyzed Reactions

Foundation Figure: Regulation of Enzyme Activity

Chapter 9: Carbohydrates: Sugars, Saccharides, Glycans

9.1. Monosaccharides

Aldoses and Ketoses

Enantiomers

Alternative Designations for Enantiomers: *dl* and *RS*

Monosaccharide Enantiomers in Nature

Diastereomers

Tetrose Diastereomers

Pentose Diastereomers

Hexose Diastereomers

Aldose Ring Structures

Pentose Rings

Hexose Rings

Sugars with More Than Six Carbons

9.2. Derivatives of the Monosaccharides

Phosphate Esters

Lactones and Acids

Alditols

Amino Sugars

Glycosides

9.3. Oligosaccharides

Oligosaccharide Structures

Distinguishing Features of Different Disaccharides

Table of Contents

Writing the Structure of Disaccharides

Stability and Formation of the Glycosidic Bond

9.4. Polysaccharides

Storage Polysaccharides

Structural Polysaccharides

Cellulose

Chitin

Glycosaminoglycans

The Proteoglycan Complex

Nonstructural Roles of Glycosaminoglycans

Bacterial Cell Wall Polysaccharides; Peptidoglycan

9.5. Glycoproteins

N-Linked and O-Linked Glycoproteins

N-Linked Glycans

O-Linked Glycans

Blood Group Antigens

Erythropoietin: A Glycoprotein with Both O- and N-Linked Oligosaccharides

Influenza Neuraminidase, a Target for Antiviral Drugs

Tools of Biochemistry: 9A The Emerging Field of Glycomics

Chapter 10: Lipids, Membranes, and Cellular Transport

10.1. The Molecular Structure and Behavior of Lipids

Fatty Acids

Triacylglycerols: Fats

Soaps and Detergents

Waxes

10.2. The Lipid Constituents of Biological Membranes

Glycerophospholipids

Sphingolipids and Glycosphingolipids

Glycoglycerolipids

Cholesterol

10.3. The Structure and Properties of Membranes and Membrane Proteins

Motion in Membranes

Motion in Synthetic Membranes

Motion in Biological Membranes

The Asymmetry of Membranes

Characteristics of Membrane Proteins

Insertion of Proteins into Membranes

Table of Contents

Evolution of the Fluid Mosaic Model of Membrane Structure

10.4. Transport Across Membranes

The Thermodynamics of Transport

Nonmediated Transport: Diffusion

Facilitated Transport: Accelerated Diffusion

Carriers

Permeases

Pore-Facilitated Transport

Ion Selectivity and Gating

Active Transport: Transport Against a Concentration Gradient

10.5. Ion Pumps: Direct Coupling of ATP Hydrolysis to Transport

10.6. Ion Transporters and Disease

10.7. Cotransport Systems

10.8. Excitable Membranes, Action Potentials, and Neurotransmission

The Resting Potential

The Action Potential

Toxins and Neurotransmission

Foundation Figure: Targeting Pain and Inflammation through Drug Design

Chapter 11: Chemical Logic of Metabolism

11.1. A First Look at Metabolism

11.2. Freeways on the Metabolic Road Map

Central Pathways of Energy Metabolism

Distinct Pathways for Biosynthesis and Degradation

11.3. Biochemical Reaction Types

Nucleophilic Substitutions

Nucleophilic Additions

Carbonyl Condensations

Eliminations

Oxidations and Reductions

11.4. Bioenergetics of Metabolic Pathways

Oxidation as a Metabolic Energy Source

Biological Oxidations: Energy Release in Small Increments

Energy Yields, Respiratory Quotients, and Reducing Equivalents

ATP as a Free Energy Currency

Metabolite Concentrations and Solvent Capacity

Thermodynamic Properties of ATP

Table of Contents

The Important Differences Between ΔG and ΔG°

Kinetic Control of Substrate Cycles

Other High-Energy Phosphate Compounds

Other High-Energy Nucleotides

Adenylate Energy Charge

11.5. Major Metabolic Control Mechanisms

Control of Enzyme Levels

Control of Enzyme Activity

Compartmentation

Hormonal Regulation

Distributive Control of Metabolism

11.6 Experimental Analysis of Metabolism

Goals of the Study of Metabolism

Levels of Organization at Which Metabolism Is Studied

Whole Organisms

Isolated or Perfused Organs

Whole Cells

Cell-Free Systems

Purified Components

Systems Level

Metabolic Probes

Tools of Biochemistry: 11A Metabolomics

Tools of Biochemistry: 11B Radioactive and Stable Isotopes

Foundation Figure: Enzyme Kinetics and Drug Action

Chapter 12: Carbohydrate Metabolism: Glycolysis, Gluconeogenesis, Glycogen Metabolism, and the Pentose Phosphate Pathway

12.1. An Overview of Glycolysis

Relation of Glycolysis to Other Pathways

Anaerobic and Aerobic Glycolysis

Chemical Strategy of Glycolysis

12.2. Reactions of Glycolysis

Reactions 1-5: The Energy Investment Phase

Reaction 1: The First ATP Investment

Reaction 2: Isomerization of Glucose-6-Phosphate

Reaction 3: The Second Investment of ATP

Reaction 4: Cleavage to Two Triose Phosphates

Reaction 5: Isomerization of Dihydroxyacetone Phosphate

Table of Contents

Reactions 610: The Energy Generation Phase

Reaction 6: Generation of the First Energy-Rich Compound

Reaction 7: The First Substrate-Level Phosphorylation

Reaction 8: Preparing for Synthesis of the Next High-Energy Compound

Reaction 9: Synthesis of the Second High-Energy Compound

Reaction 10: The Second Substrate-Level Phosphorylation

12.3. Metabolic Fates of Pyruvate

Lactate Metabolism

Isozymes of Lactate Dehydrogenase

Ethanol Metabolism

12.4. Energy and Electron Balance Sheets

12.5. Gluconeogenesis

Physiological Need for Glucose Synthesis in Animals

Enzymatic Relationship of Gluconeogenesis to Glycolysis

Bypass 1: Conversion of Pyruvate to Phosphoenolpyruvate

Bypass 2: Conversion of Fructose-1,6-bisphosphate to Fructose-6-phosphate

Bypass 3: Conversion of Glucose-6-phosphate to Glucose

Stoichiometry and Energy Balance of Gluconeogenesis

Gluconeogenesis

Reversal of Glycolysis

Substrates for Gluconeogenesis

Lactate

Amino Acids

Ethanol Consumption and Gluconeogenesis

12.6. Coordinated Regulation of Glycolysis and Gluconeogenesis

The Pasteur Effect

Reciprocal Regulation of Glycolysis and Gluconeogenesis

Regulation at the Phosphofructokinase/ Fructose-1,6-Bisphosphatase Substrate Cycle

Fructose-2,6-bisphosphate and the Control of Glycolysis and Gluconeogenesis

Regulation at the Pyruvate Kinase/Pyruvate Carboxylase + PEPCK Substrate Cycle

Regulation at the Hexokinase/Glucose-6-Phosphatase Substrate Cycle

12.7. Entry of Other Sugars into the Glycolytic Pathway

Monosaccharide Metabolism

Galactose Utilization

Fructose Utilization

Disaccharide Metabolism

Glycerol Metabolism

Table of Contents

Polysaccharide Metabolism

Hydrolytic and Phosphorolytic Cleavages

Starch and Glycogen Digestion

12.8. Glycogen Metabolism in Muscle and Liver

Glycogen Breakdown

Glycogen Biosynthesis

Biosynthesis of UDP-Glucose

The Glycogen Synthase Reaction

Formation of Branches

12.9. Coordinated Regulation of Glycogen Metabolism

Structure of Glycogen Phosphorylase

Control of Phosphorylase Activity

Proteins in the Glycogenolytic Cascade

Cyclic AMP-Dependent Protein Kinase

Phosphorylase b Kinase

Calmodulin

Nonhormonal Control of Glycogenolysis

Control of Glycogen Synthase Activity

Congenital Defects of Glycogen Metabolism in Humans

12.10. A Biosynthetic Pathway That Oxidizes Glucose: The Pentose Phosphate Pathway

The Oxidative Phase: Generating Reducing Power as NADPH

The Nonoxidative Phase: Alternative Fates of Pentose Phosphates

Production of Six-Carbon and Three-Carbon Sugar Phosphates

Tailoring the Pentose Phosphate Pathway to Specific Needs

Regulation of the Pentose Phosphate Pathway

Human Genetic Disorders Involving Pentose Phosphate Pathway Enzymes

Chapter 13: The Citric Acid Cycle

13.1. Overview of Pyruvate Oxidation and the Citric Acid Cycle

The Three Stages of Respiration

Chemical Strategy of the Citric Acid Cycle

Discovery of the Citric Acid Cycle

13.2. Pyruvate Oxidation: A Major Entry Route for Carbon into the Citric Acid Cycle

Overview of Pyruvate Oxidation and the Pyruvate Dehydrogenase Complex

Coenzymes Involved in Pyruvate Oxidation and the Citric Acid Cycle

Thiamine Pyrophosphate (TPP)

Lipoic Acid (Lipoamide)

Coenzyme A: Activation of Acyl Groups

Table of Contents

Flavin Adenine Dinucleotide (FAD)

Nicotinamide Adenine Dinucleotide (NAD⁺)

Action of the Pyruvate Dehydrogenase Complex

13.3. The Citric Acid Cycle

Step 1: Introduction of Two Carbon Atoms as Acetyl-CoA

Step 2: Isomerization of Citrate

Step 3: Conservation of the Energy Released by an Oxidative Decarboxylation in the Reduced Electron Carrier NADH

Step 4: Conservation of Energy in NADH by a Second Oxidative Decarboxylation

Step 5: A Substrate-Level Phosphorylation

Step 6: A Flavin-Dependent Dehydrogenation

Step 7: Hydration of a CarbonCarbon Double Bond

Step 8: An Oxidation that Regenerates Oxaloacetate

13.4. Stoichiometry and Energetics of the Citric Acid Cycle

13.5. Regulation of Pyruvate Dehydrogenase and the Citric Acid Cycle

Control of Pyruvate Oxidation

Control of the Citric Acid Cycle

13.6. Organization and Evolution of the Citric Acid Cycle

13.7. Citric Acid Cycle Malfunction as a Cause of Human Disease

13.8. Anaplerotic Sequences: The Need to Replace Cycle Intermediates

Reactions that Replenish Oxaloacetate

The Malic Enzyme

Reactions Involving Amino Acids

13.9. The Glyoxylate Cycle: An Anabolic Variant of the Citric Acid Cycle

Tools of Biochemistry: 13A Detecting and Analyzing ProteinProtein Interactions

Chapter 14: Electron Transport, Oxidative Phosphorylation, and Oxygen Metabolism

14.1. The Mitochondrion: Scene of the Action

14.2. Free Energy Changes in Biological Oxidations

14.3. Electron Transport

Electron Carriers in the Respiratory Chain

Flavoproteins

IronSulfur Proteins

Coenzyme Q

Cytochromes

Respiratory Complexes

Table of Contents

NADH Coenzyme Q Reductase (Complex I)
Succinate Coenzyme Q Reductase (Complex II; Succinate Dehydrogenase)
Coenzyme Q: Cytochrome c Oxidoreductase (Complex III)
Cytochrome c Oxidase (Complex IV)

14.4. Oxidative Phosphorylation

The P/O Ratio: Energetics of Oxidative Phosphorylation
Oxidative Reactions That Drive ATP Synthesis
Mechanism of Oxidative Phosphorylation: Chemiosmotic Coupling
A Closer Look at Chemiosmotic Coupling: The Experimental Evidence
Membranes Can Establish Proton Gradients
An Intact Inner Membrane Is Required for Oxidative Phosphorylation
Key Electron Transport Proteins Span the Inner Membrane
Uncouplers Act by Dissipating the Proton Gradient
Generation of a Proton Gradient Permits ATP Synthesis Without Electron Transport
Complex V: The Enzyme System for ATP Synthesis
Discovery and Reconstitution of ATP Synthase
Structure of the Mitochondrial F₁ATP Synthase Complex
Mechanism of ATP Synthesis

14.5. Respiratory States and Respiratory Control

14.6. Mitochondrial Transport Systems

Transport of Substrates and Products into and out of Mitochondria
Shuttling Cytoplasmic Reducing Equivalents into Mitochondria

14.7. Energy Yields from Oxidative Metabolism

14.8. The Mitochondrial Genome, Evolution, and Disease

14.9. Oxygen as a Substrate for Other Metabolic Reactions

Oxidases and Oxygenases
Cytochrome P450 Monooxygenase
Reactive Oxygen Species, Antioxidant Defenses, and Human Disease
Formation of Reactive Oxygen Species
Dealing with Oxidative Stress
Foundation Figure: Intermediary Metabolism

Chapter 15: Photosynthesis

15.1. The Basic Processes of Photosynthesis

15.2. The Chloroplast

15.3. The Light Reactions

Absorption of Light: The Light-Harvesting System

Table of Contents

The Energy of Light

The Light-Absorbing Pigments

The Light-Gathering Structures

Photochemistry in Plants and Algae: Two Photosystems in Series

Photosystem II: The Splitting of Water

Photosystem I: Production of NADPH

Summation of the Two Systems: The Overall Reaction and NADPH and ATP Generation

An Alternative Light Reaction Mechanism: Cyclic Electron Flow

Reaction Center Complexes in Photosynthetic Bacteria

Evolution of Photosynthesis

15.4. The Carbon Reactions: The Calvin Cycle

Stage I: Carbon Dioxide Fixation and Sugar Production

Incorporation of CO₂ into a Three-Carbon Sugar

Formation of Hexose Sugars

Stage II: Regeneration of the Acceptor

15.5. A Summary of the Light and Carbon Reactions in Two-System Photosynthesis

The Overall Reaction and the Efficiency of Photosynthesis

Regulation of Photosynthesis

15.6. Photorespiration and the C₄ Cycle

Chapter 16: Lipid Metabolism

Part I: Bioenergetic Aspects of Lipid Metabolism

16.1. Utilization and Transport of Fat and Cholesterol

Fats as Energy Reserves

Fat Digestion and Absorption

Transport of Fat to Tissues: Lipoproteins

Classification and Functions of Lipoproteins

Transport and Utilization of Lipoproteins

Cholesterol Transport and Utilization in Animals

The LDL Receptor and Cholesterol Homeostasis

Cholesterol, LDL, and Atherosclerosis

Mobilization of Stored Fat for Energy Generation

16.2. Fatty Acid Oxidation

Early Experiments

Fatty Acid Activation and Transport into Mitochondria

The β -Oxidation Pathway

Reaction 1: The Initial Dehydrogenation

Reactions 2 and 3: Hydration and Dehydrogenation

Table of Contents

Reaction 4: Thiolytic Cleavage

Mitochondrial β -Oxidation Involves Multiple Isozymes

Energy Yield from Fatty Acid Oxidation

Oxidation of Unsaturated Fatty Acids

Oxidation of Fatty Acids with Odd-Numbered Carbon Chains

Control of Fatty Acid Oxidation

Ketogenesis

16.3. Fatty Acid Biosynthesis

Relationship of Fatty Acid Synthesis to Carbohydrate Metabolism

Early Studies of Fatty Acid Synthesis

Biosynthesis of Palmitate from Acetyl-CoA

Synthesis of Malonyl-CoA

Malonyl-CoA to Palmitate

Multifunctional Proteins in Fatty Acid Synthesis

Transport of Acetyl Units and Reducing Equivalents into the Cytosol

Elongation of Fatty Acid Chains

Fatty Acid Desaturation

Control of Fatty Acid Synthesis

16.4. Biosynthesis of Triacylglycerols

Part II: Metabolism of Membrane Lipids, Steroids, and Other Complex Lipids

16.5. Glycerophospholipids

16.6. Sphingolipids

16.7. Steroid Metabolism

Steroids: Some Structural Considerations

Biosynthesis of Cholesterol

Early Studies of Cholesterol Biosynthesis

Stage 1: Formation of Mevalonate

Stage 2: Synthesis of Squalene from Mevalonate

Stage 3: Cyclization of Squalene to Lanosterol and Its Conversion to Cholesterol

Control of Cholesterol Biosynthesis

Cholesterol Derivatives: Bile Acids, Steroid Hormones, and Vitamin D

Bile Acids

Steroid Hormones

Vitamin D

Lipid-Soluble Vitamins

Vitamin A

Vitamin E

Table of Contents

Vitamin K

16.8. Eicosanoids: Prostaglandins, Thromboxanes, and Leukotrienes

Chapter 17: Interorgan and Intracellular Coordination of Energy Metabolism in Vertebrates

17.1. Interdependence of the Major Organs in Vertebrate Fuel Metabolism

Fuel Inputs and Outputs

Metabolic Division of Labor Among the Major Organs

Brain

Muscle

Heart

Adipose Tissue

Liver

Blood

17.2. Hormonal Regulation of Fuel Metabolism

Actions of the Major Hormones

Insulin

Glucagon

Epinephrine

Coordination of Energy Homeostasis

AMP-Activated Protein Kinase (AMPK)

Mammalian Target of Rapamycin (mTOR)

Sirtuins

Endocrine Regulation of Energy Homeostasis

17.3. Responses to Metabolic Stress: Starvation, Diabetes

Starvation

Diabetes

Foundation Figure: Energy Regulation

Chapter 18: Amino Acid and Nitrogen Metabolism

18.1. Utilization of Inorganic Nitrogen: The Nitrogen Cycle

Biological Nitrogen Fixation

Nitrate Utilization

18.2. Utilization of Ammonia: Biogenesis of Organic Nitrogen

Glutamate Dehydrogenase: Reductive Amination of α -Ketoglutarate

Glutamine Synthetase: Generation of Biologically Active Amide Nitrogen

Carbamoyl Phosphate Synthetase: Generation of an Intermediate for Arginine and Pyrimidine Synthesis

18.3. The Nitrogen Economy and Protein Turnover

Table of Contents

Metabolic Consequences of the Absence of Nitrogen Storage Compounds

Protein Turnover

Intracellular Proteases and Sites of Turnover

Chemical Signals for Turnover Ubiquitination

18.4. Coenzymes Involved in Nitrogen Metabolism

Pyridoxal Phosphate

Folic Acid Coenzymes and One-Carbon Metabolism

Discovery and Chemistry of Folic Acid

Conversion of Folic Acid to Tetrahydrofolate

Tetrahydrofolate in the Metabolism of One-Carbon Units

Folic Acid in the Prevention of Heart Disease and Birth Defects

B12 Coenzymes

B12 Coenzymes and Pernicious Anemia

18.5. Amino Acid Degradation and Metabolism of Nitrogenous End Products

Transamination Reactions

Detoxification and Excretion of Ammonia

Transport of Ammonia to the Liver

The KrebsHenseleit Urea Cycle

18.6. Pathways of Amino Acid Degradation

Pyruvate Family of Glucogenic Amino Acids

Oxaloacetate Family of Glucogenic Amino Acids

α -Ketoglutarate Family of Glucogenic Amino Acids

Succinyl-CoA Family of Glucogenic Amino Acids

Acetoacetate/Acetyl-CoA Family of Ketogenic Amino Acids

Phenylalanine and Tyrosine Degradation

18.7. Amino Acid Biosynthesis

Biosynthetic Capacities of Organisms

Amino Acid Biosynthetic Pathways

Synthesis of Glutamate, Aspartate, Alanine, Glutamine, and Asparagine

Synthesis of Serine and Glycine from 3-Phosphoglycerate

Synthesis of Valine, Leucine, and Isoleucine from Pyruvate

18.8. Amino Acids as Biosynthetic Precursors

S-Adenosylmethionine and Biological Methylation

Precursor Functions of Glutamate

Arginine Is the Precursor for Nitric Oxide and Creatine Phosphate

Tryptophan and Tyrosine Are Precursors of Neurotransmitters and Biological Regulators

Chapter 19: Nucleotide Metabolism

Table of Contents

19.1. Outlines of Pathways in Nucleotide Metabolism

- Biosynthetic Routes: De Novo and Salvage Pathways
- Nucleic Acid Degradation and the Importance of Nucleotide Salvage
- PRPP, a Central Metabolite in De Novo and Salvage Pathways

19.2. De Novo Biosynthesis of Purine Ribonucleotides

- Synthesis of the Purine Ring
- Enzyme Organization in the Purine Biosynthetic Pathway
- Synthesis of ATP and GTP from Inosine Monophosphate

19.3 Purine Catabolism and Its Medical Significance

- Uric Acid, a Primary End Product
- Medical Abnormalities of Purine Catabolism
- Gout
- LeschNyhan Syndrome
- Severe Combined Immunodeficiency Disease

19.4. Pyrimidine Ribonucleotide Metabolism

- De Novo Biosynthesis of UTP and CTP
- Glutamine-Dependent Amidotransferases
- Multifunctional Enzymes in Eukaryotic Pyrimidine Metabolism

19.5 Deoxyribonucleotide Metabolism

- Reduction of Ribonucleotides to Deoxyribonucleotides
- RNR Structure and Mechanism
- Source of Electrons for Ribonucleotide Reduction
- Regulation of Ribonucleotide Reductase Activity
- Regulation of dNTP Pools by Selective dNTP Degradation
- Biosynthesis of Thymine Deoxyribonucleotides
- Salvage Routes to Deoxyribonucleotides
- Thymidylate Synthase: A Target Enzyme for Chemotherapy

19.6. Virus-Directed Alterations of Nucleotide Metabolism

19.7. Other Medically Useful Analogs

Chapter 20: Mechanisms of Signal Transduction

20.1. An Overview of Hormone Action

- Chemical Nature of Hormones and Other Signaling Agents
- Hierarchical Nature of Hormonal Control
- Hormone Biosynthesis

20.2. Modular Nature of Signal Transduction Systems: G Protein-Coupled Signaling

- Receptors
- Receptors as Defined by Interactions with Drugs

Table of Contents

Receptors and Adenylate Cyclase as Distinct Components of Signal Transduction Systems

Structural Analysis of G Protein-Coupled Receptors

Transducers: G Proteins

Actions of G Proteins

Structure of G Proteins

Consequences of Blocking GTPase

The Versatility of G Proteins

Interaction of GPCRs with G Proteins

G Proteins in the Visual Process

Effectors

Second Messengers

Cyclic AMP

Cyclic GMP and Nitric Oxide

Phosphoinositides

20.3. Receptor Tyrosine Kinases and Insulin Signaling

20.4. Hormones and Gene Expression: Nuclear Receptors

20.5. Signal Transduction, Growth Control, and Cancer

Viral and Cellular Oncogenes

Oncogenes in Human Tumors

The Cancer Genome Mutational Landscape

20.6. Neurotransmission

The Cholinergic Synapse

Fast and Slow Synaptic Transmission

Actions of Specific Neurotransmitters

Drugs That Act in the Synaptic Cleft

Peptide Neurotransmitters and Neurohormones

Foundation Figure: Cell Signaling and Protein Regulation

Chapter 21: Genes, Genomes, and Chromosomes

21.1. Bacterial and Viral Genomes

Viral Genomes

Bacterial Genomes The Nucleoid

21.2. Eukaryotic Genomes

Genome Sizes

Repetitive Sequences

Satellite DNA

Duplications of Functional Genes

Alu Elements

Table of Contents

Introns

Gene Families

Multiple Variants of a Gene

Pseudogenes

The ENCODE Project and the Concept of Junk DNA

21.3. Physical Organization of Eukaryotic Genes: Chromosomes and Chromatin

The Nucleus

Chromatin

Histones and Nonhistone Chromosomal Proteins

The Nucleosome

Higher-order Chromatin Structure in the Nucleus

21.4. Nucleotide Sequence Analysis of Genomes

Restriction and Modification

Properties of Restriction and Modification Enzymes

Determining Genome Nucleotide Sequences

Mapping Large Genomes

Generating Physical Maps

The Principle of Southern Analysis

Southern Transfer and DNA Fingerprinting

Locating Genes on the Human Genome

Sequence Analysis Using Artificial Chromosomes

Size of the Human Genome

Tools of Biochemistry: 21A Polymerase Chain Reaction

Chapter 22: DNA Replication

22.1. Early Insights into DNA Replication

22.2. DNA Polymerases: Enzymes Catalyzing Polynucleotide Chain Elongation

Structure and Activities of DNA Polymerase I

DNA Substrates for the Polymerase Reaction

Multiple Activities in a Single Polypeptide Chain

Structure of DNA Polymerase I

Discovery of Additional DNA Polymerases

Structure and Mechanism of DNA Polymerases

22.3. Other Proteins at the Replication Fork

Genetic Maps of *E. coli* and Bacteriophage T4

Replication Proteins in Addition to DNA Polymerase

Discontinuous DNA Synthesis

RNA Primers

Table of Contents

- Proteins at the Replication Fork
- The DNA Polymerase III Holoenzyme
- Sliding Clamp
- Clamp Loading Complex
- Single-Stranded DNA-Binding Proteins: Maintaining Optimal Template Conformation
- Helicases: Unwinding DNA Ahead of the Fork
- Topoisomerases: Relieving Torsional Stress
- Actions of Type I and Type II Topoisomerases
- The Four Topoisomerases of *E. coli*
- A Model of the Replisome

22.4. Eukaryotic DNA Replication

- DNA Polymerases
- Other Eukaryotic Replication Proteins
- Replication of Chromatin

22.5. Initiation of DNA Replication

- Initiation of *E. coli* DNA Replication at *ori c*
- Initiation of Eukaryotic Replication

22.6. Replication of Linear Genomes

- Linear Virus Genome Replication
- Telomerase

22.7. Fidelity of DNA Replication

- 3 Exonucleolytic Proofreading
- Polymerase Insertion Specificity
- DNA Precursor Metabolism and Genomic Stability
- Ribonucleotide Incorporation and Genomic Stability

22.8. RNA Viruses: The Replication of RNA Genomes

- RNA-Dependent RNA Replicases
- Replication of Retroviral Genomes

Chapter 23: DNA Repair, Recombination, and Rearrangement

23.1. DNA Repair

- Types and Consequences of DNA Damage
- Direct Repair of Damaged DNA Bases: Photoreactivation and Alkyltransferases
- Photoreactivation
- O6-Alkylguanine Alkyltransferase
- Nucleotide Excision Repair: Excinucleases
- Base Excision Repair: DNA N-Glycosylases
- Replacement of Uracil in DNA by BER

Table of Contents

Repair of Oxidative Damage to DNA

Mismatch Repair

Double-Strand Break Repair

Daughter-Strand Gap Repair

Damage Response

23.2. Recombination

Site-Specific Recombination

Homologous Recombination

Breaking and Joining of Chromosomes

Models for Recombination

Proteins Involved in Homologous Recombination

23.3. Gene Rearrangements

Immunoglobulin Synthesis: Generating Antibody Diversity

Transposable Genetic Elements

Retroviruses

Gene Amplification

Tools of Biochemistry: 23A Manipulating the Genome

Foundation Figure: Antibody Diversity and Use as Therapeutics

Chapter 24: Transcription and Posttranscriptional Processing

24.1. DNA as the Template for RNA Synthesis

The Predicted Existence of Messenger RNA

T2 Bacteriophage and the Demonstration of Messenger RNA

RNA Dynamics in Uninfected Cells

24.2. Enzymology of RNA Synthesis: RNA Polymerase

Biological Role of RNA Polymerase

Structure of RNA Polymerase

24.3. Mechanism of Transcription in Bacteria

Initiation of Transcription: Interactions with Promoters

Initiation and Elongation: Incorporation of Ribonucleotides

Punctuation of Transcription: Termination

Factor-Independent Termination

Factor-Dependent Termination

24.4. Transcription in Eukaryotic Cells

RNA Polymerase I: Transcription of the Major Ribosomal RNA Genes

RNA Polymerase III: Transcription of Small RNA Genes

RNA Polymerase II: Transcription of Structural Genes

Chromatin Structure and Transcription

Table of Contents

Transcriptional Elongation

Termination of Transcription

24.5. Posttranscriptional Processing

Bacterial mRNA Turnover

Posttranscriptional Processing in the Synthesis of Bacterial rRNAs and tRNAs

rRNA Processing

tRNA Processing

Processing of Eukaryotic mRNA

Capping

Splicing

Alternative Splicing

Tools of Biochemistry: 24A Analyzing the Transcriptome

Tools of Biochemistry: 24B Chromatin Immunoprecipitation

Chapter 25: Information Decoding: Translation and Posttranslational Protein Processing

25.1. An Overview of Translation

25.2. The Genetic Code

How the Code Was Deciphered

Features of the Code

Deviations from the Genetic Code

The Wobble Hypothesis

tRNA Abundance and Codon Bias

Punctuation: Stopping and Starting

25.3. The Major Participants in Translation: mRNA, tRNA, and Ribosomes

Messenger RNA

Transfer RNA

Aminoacyl-tRNA Synthetases: The First Step in Protein Synthesis

The Ribosome and Its Associated Factors

Soluble Protein Factors in Translation

Components of Ribosomes

Ribosomal RNA Structure

Internal Structure of the Ribosome

25.4. Mechanism of Translation

Initiation

Elongation

Termination

Suppression of Nonsense Mutations

25.5. Inhibition of Translation by Antibiotics

Table of Contents

25.6. Translation in Eukaryotes

25.7. Rate of Translation; Polyribosomes

25.8. The Final Stages in Protein Synthesis: Folding and Covalent Modification

Chain Folding

Covalent Modification

25.9. Protein Targeting in Eukaryotes

Proteins Synthesized in the Cytoplasm

Proteins Synthesized on the Rough Endoplasmic Reticulum

Role of the Golgi Complex

Chapter 26: Regulation of Gene Expression

26.1. Regulation of Transcription in Bacteria

The Lactose Operon Earliest Insights into Transcriptional Regulation

Isolation and Properties of the Lactose Repressor

The Repressor Binding Site

Regulation of the lac Operon by Glucose: A Positive Control System

The CRP-DNA Complex

Some Other Bacterial Transcriptional Regulatory Systems: Variations on a Theme

Bacteriophage λ : Multiple Operators, Dual Repressors, Interspersed Promoters and Operators

The SOS Regulon: Activation of Multiple Operons by a Common Set of Environmental Signals

Biosynthetic Operons: Ligand-Activated Repressors and Attenuation

Applicability of the Operon Model Variations on a Theme

26.2. Transcriptional Regulation in Eukaryotes

Chromatin and Transcription

Transcriptional Control Sites and Genes

Nucleosome Remodeling Complexes

Transcription Initiation

Regulation of the Elongation Cycle by RNA Polymerase Phosphorylation

26.3. DNA Methylation, Gene Silencing, and Epigenetics

DNA Methylation in Eukaryotes

DNA Methylation and Gene Silencing

Genomic Distribution of Methylated Cytosines

Other Proposed Epigenetic Phenomena

5-Hydroxymethylcytosine

Chromatin Histone Modifications

26.4. Regulation of Translation

Regulation of Bacterial Translation

Regulation of Eukaryotic Translation

Table of Contents

Phosphorylation of Eukaryotic Initiation Factors

Long Noncoding RNAs

26.5. RNA Interference

MicroRNAs

Small Interfering RNAs

26.6. Riboswitches

26.7. RNA Editing

Foundation Figure: Information Flow in Biological Systems

Appendix I: Answers to Selected Problems

Appendix II: References
