Quantitative Analysis for Decision Makers

Table of Contents

Front Cover

Title Page

Copyright Page

Contents

List of 'QADM in action' case studies

Preface

Publisher's acknowledgements

1 Introduction

The use of quantitative techniques by business

The role of quantitative analysis in business

Models in quantitative decision making

Use of computers

Using the text

Summary

2 Tools of the Trade

Learning objectives

Some basic terminology

Fractions, proportions, percentages

Rounding and significant figures

Common notation

Powers and roots

Logarithms

Summation and factorials

Equations and mathematical models

Graphs

Real and money terms

Worked example

Table of Contents

Summary

Exercises

3 Presenting Management Information

Learning objectives

A business example

Bar charts

Pie charts

Frequency distributions

Percentage and cumulative frequencies

Histograms

Frequency polygons

Ogives

Lorenz curves

Time-series graphs

Z charts

Scatter diagrams

Radar charts

Which chart to use

General principles of graphical presentation

Worked example

Summary

Exercises

4 Management Statistics

Learning objectives

A business example

Why are management statistics needed?

Measures of average

Measures of variability

Using the statistics

Calculating statistics for aggregated data

Index numbers

Table of Contents

Worked example

Summary

Exercises

5 Probability and Probability Distributions

Learning objectives

Terminology

The multiplication rule

The addition rule

A business application

Probability distributions

The binomial distribution

The normal distribution

Worked example

Summary

Exercises

6 Decision Making Under Uncertainty

Learning objectives

The decision problem

The maximax criterion

The maximin criterion

The minimax regret criterion

Decision making using probability information

Risk

Decision trees

The value of perfect information

Worked example

Summary

Exercises

7 Market Research and Statistical Inference

Learning objectives

Populations and samples

Table of Contents

- Sampling distributions
- The Central Limit Theorem
- Characteristics of the sampling distribution
- Confidence intervals
- Other confidence intervals
- Confidence intervals for proportions
- Interpreting confidence intervals
- Hypothesis tests
- Tests on a sample mean
- Tests on the difference between two means
- Tests on two proportions or percentages
- Tests on small samples
- Inferential statistics using a computer package
- p values in hypothesis tests
- X² tests
- Worked example
- Summary
- Exercises

8 Quality Control and Quality Management

- Learning objectives
- The importance of quality
- Techniques in quality management
- Statistical process control
- Control charts
- Control charts for attribute variables
- Specification limits versus control limits
- Pareto charts
- Ishikawa diagrams
- Six sigma
- Worked example
- Summary

Table of Contents

Exercises

9 Forecasting I: Moving Averages and Time Series

Learning objectives

The need for forecasting

Approaches to forecasting

Trend projections

Time-series models

Worked example

Summary

Exercises

10 Forecasting II: Regression

Learning objectives

The principles of simple linear regression

The correlation coefficient

The line of best fit

Using the regression equation

Further statistical evaluation of the regression equation

Non-linear regression

Multiple regression

The forecasting process

Worked example

Summary

Exercises

11 Linear Programming

Learning objectives

The business problem

Formulating the problem

Graphical solution to the LP formulation

Sensitivity analysis

Computer solutions

Assumptions of the basic model

Table of Contents

Dealing with more than two variables

Extensions to the basic LP model

Worked example

Summary

Exercises

Appendix: Solving LP problems with excel

12 Stock Control

Learning objectives

The stock-control problem

Costs involved in stock control

The stock-control decision

The economic order quantity model

The reorder cycle

Assumptions of the EOQ model

Incorporating lead time

Some technical insights

Classification of stock items

Worked example

Summary

Exercises

13 Project Management

Learning objectives

Characteristics of a project

Project management

Business example

Network diagrams

Developing the network diagram

Using the network diagram

Technical point

Gantt charts

Uncertainty

Table of Contents

Project costs and crashing

Worked example

Summary

Exercises

14 Simulation

Learning objectives

The principles of simulation

Business example

Developing the simulation model

A simulation flowchart

Using the model

Worked example

Summary

Exercises

Appendix: Simulation with excel

15 Financial Decision Making

Learning objectives

Interest

Nominal and effective interest

Present value

Investment appraisal

Replacing equipment

Worked example

Summary

Exercises

Postscript: A quick look at recent developments in QADM

Big Data and data/business analytics

Artificial Intelligence

Agent-based simulation

Data visualisation

Summary

Table of Contents

Appendices

A Binomial Distribution

B Areas in the Tail of the Normal Distribution

C Areas in the Tail of the t Distribution

D Areas in the Tail of the χ^2 Distribution

E Areas in the Tail of the F Distribution, 0.05 Level

F Solutions to Chapter Progress Check Questions

Index
